Glossary

PED

The 97/23/EC or 2014/68/EU directive, also known as the Pressure Equipment Directive, sets out the requirements to be met by pressure equipment intended to be placed on the market in the European economic area.

Technical literature

Refer to the product catalogue for the technical literature on our products at www.ksb.com.

1 General

1.1 Principles

This operating manual is supplied as an integral part of the type series and variants indicated on the front cover. The manual describes the proper and safe use of this equipment in all phases of operation.

In the event of damage, immediately contact the KSB sales organisation responsible in order to maintain the right to claim under warranty.

1.2 Target group

This operating manual is aimed at the target group of trained and qualified specialist technical personnel.

1.3 Other applicable documents

Table 1: Overview of other applicable documents

Document	Contents
Type series booklet	Description of the valve
Flow characteristics ¹⁾	Information on Kv and zeta values
General assembly drawing ²⁾	Sectional drawing of the valve
Sub-supplier product literature ³⁾	Operating manuals and other product literature for the accessories

Observe the relevant manufacturer's product literature for the accessories.

1.4 Symbols

Table 2: Symbols used in this manual

Symbol	Description
✓	Conditions which need to be fulfilled before proceeding with the step-by-step instructions
▷	Safety instructions
⇒	Result of an action
⇒	Cross-references
1. 2.	Step-by-step instructions
	Note Recommendations and important information on how to handle the product

1) If any

2) If inclusion in the scope of supply has been agreed; otherwise refer to the type series booklet.

3) If inclusion in the scope of supply has been agreed.

DANGER

2 Safety

All the information contained in this section refers to hazardous situations.

In addition to the present general safety information the action-related safety information given in the other sections must be observed.

2.1 Key to safety symbols/markings

Table 3: Definition of safety symbols/markings

Symbol	Description
 DANGER	DANGER This signal word indicates a high-risk hazard which, if not avoided, will result in death or serious injury.
 WARNING	WARNING This signal word indicates a medium-risk hazard which, if not avoided, could result in death or serious injury.
 CAUTION	CAUTION This signal word indicates a hazard which, if not avoided, could result in damage to the machine and its functions.
	Explosion protection This symbol identifies information about avoiding explosions in potentially explosive atmospheres in accordance with Directive 2014/34/EU (ATEX).
	General hazard In conjunction with one of the signal words this symbol indicates a hazard which will or could result in death or serious injury.
	Electrical hazard In conjunction with one of the signal words this symbol indicates a hazard involving electrical voltage and identifies information about protection against electrical voltage.
	Machine damage In conjunction with the signal word CAUTION this symbol indicates a hazard for the machine and its functions.

2.2 General

This manual contains general installation, operating and maintenance instructions that must be observed to ensure safe valve operation and prevent personal injury and damage to property.

The safety information in all sections of this manual must be complied with.

The operating manual must be read and fully understood by the specialist personnel/operators responsible prior to installation and commissioning.

The contents of this operating manual must be available to the specialist personnel at the site at all times.

Instructions and information attached directly to the valve must always be complied with and kept in a perfectly legible condition at all times. This applies to, for example: flow direction arrow, manufacturer, type designation, nominal pressure, nominal size, year of construction and material.

The operator is responsible for ensuring compliance with all local regulations not taken into account in this manual.

The design, manufacture and the testing of the valves are subject to a QM system to DIN EN ISO 9001 as well as the European Pressure Equipment Directive 97/23/EC. Compliance with these requirements, however, is based on normal, predominantly static loading.

Valves exposed to creep-rupture conditions have a limited service life and have to meet the applicable regulations stipulated in the technical codes.

In the case of customised special variants, further restrictions may apply with regard to the operating mode and service life. Please refer to the relevant sales literature for this information.

This operating manual does not take into account:

- Any eventualities or incidents which may occur during installation performed by the customer, operation and maintenance.
- Local regulations; the operator must ensure that such regulations are strictly observed by all, including the personnel called in for installation.

2.3 Intended use

- Only operate valves which are in perfect technical condition.
- Do not operate partially assembled valves.
- The valve must only be used for fluids specified in the product literature.
- Only operate the valve within the permissible operating range specified for pressure and temperature.
- The valve's design and rating are based on predominantly static loading in accordance with the codes applied. Consult the manufacturer if the valve is subjected to dynamic loads or any other additional influences.
- Consult the manufacturer about any other modes of operation not described in the product literature.

2.3.1 Prevention of foreseeable misuse

- Never exceed the permissible application and operating limits specified in the data sheet or product literature regarding pressure, temperature, etc.
- Observe all safety information and instructions in this manual.

2.4 Personnel qualification and training

All personnel involved must be fully qualified to transport, install, operate, maintain and inspect the product this manual refers to and be fully aware of the interaction between the valve and the system.

The responsibilities, competence and supervision of all personnel involved in transport, installation, operation, maintenance and inspection must be clearly defined by the operator.

Deficits in knowledge must be rectified by means of training and instruction provided by sufficiently trained specialist personnel. If required, the operator can commission the manufacturer/supplier to train the personnel.

Hands-on training at the valve must always be supervised by specialist technical personnel.

2.5 Consequences and risks caused by non-compliance with this manual

- Non-compliance with this operating manual will lead to forfeiture of warranty cover and of any and all rights to claims for damages.
- Non-compliance can, for example, have the following consequences:
 - Hazards to persons due to electrical, thermal, mechanical and chemical effects and explosions
 - Failure of important product functions
 - Failure of prescribed maintenance and servicing practices
 - Hazard to the environment due to leakage of hazardous substances

2.6 Safety awareness

In addition to the safety information contained in this manual and the intended use, the following safety regulations shall be complied with:

- Accident prevention, health and safety regulations
- Explosion protection regulations
- Safety regulations for handling hazardous substances
- Applicable standards, directives and laws

2.7 Safety information for the operator/user

Actuator-operated valves are intended for use in areas which cannot be accessed by unauthorised persons. Operation of these valves in areas which can be accessed by unauthorised persons is only permitted if appropriate protective devices are fitted at the site. This must be ensured by the operator.

- The operator shall fit contact guards for hot, cold and moving parts and check that the guards function properly.
- Do not remove any contact guards during operation.
- Provide the personnel with protective equipment and make sure it is used.
- Contain leakages (e.g. at the stem seal) of hazardous fluids (e.g. explosive, toxic, hot) so as to avoid any danger to persons and the environment. Adhere to all relevant laws.
- Eliminate all electrical hazards. (In this respect refer to the applicable national safety regulations and/or regulations issued by the local energy supply companies.)

2.8 Safety information for maintenance, inspection and installation

- Modifications or alterations of the valve require the manufacturer's prior consent.
- Use only original spare parts or parts authorised by the manufacturer. The use of other parts can invalidate any liability of the manufacturer for resulting damage.
- The operator ensures that maintenance, inspection and installation is performed by authorised, qualified specialist personnel who are thoroughly familiar with the manual.
- Carry out work on the valve during standstill only.
- The valve body must have cooled down to ambient temperature.
- The pressure in the valve body must have been released and the valve must have been drained.
- When taking the valve out of service always adhere to the procedure described in the manual.
- Decontaminate valves which handle fluids posing a health hazard.
- As soon as the work has been completed, re-install and/or re-activate any safety-relevant and protective devices. Before returning the product to service, observe all instructions on commissioning.

2.9 Unauthorised modes of operation

Never operate the valve outside the limits stated in the data sheet and in this operating manual.

The warranty relating to the operating reliability and safety of the valve supplied is only valid if the valve is used in accordance with its intended use.
(⇒ Section 2.3, Page 8)

Shut-off valves are not suitable for regulating volume flow.

Gate valves are used in such a way that they are either fully open or fully closed. An intermediate position (throttling function) is not permitted.

3 Transport/Temporary Storage/Disposal

3.1 Checking the condition upon delivery

1. On transfer of goods, check each packaging unit for damage.
2. In the event of in-transit damage, assess the exact damage, document it and notify KSB or the supplying dealer (as applicable) and the insurer about the damage in writing immediately.

3.2 Transport

Always close the valve manually before transporting it. The valve is delivered ready for operation and its line connection ports may still be closed with caps, if applicable. Original spare parts are only ready for operation following assembly/installation and subsequent shell and leak testing of the valve.

	<p>DANGER</p> <p>The valve could slip out of the suspension arrangement Danger to life from falling parts!</p> <ul style="list-style-type: none">▷ Only transport the valve in the specified position.▷ Never suspend the valve from its handwheel.▷ Pay attention to the weight data and the centre of gravity.▷ Observe the applicable local accident prevention regulations.▷ Use suitable, permitted lifting accessories.▷ Transport devices (if any) on the actuator may not be suitable for being attached to a suspension arrangement in order to transport the valve/actuator assembly. Refer to the actuator operating manual for the permissible loads.
---	--

To transport the valve, suspend it from the lifting tackle as illustrated.

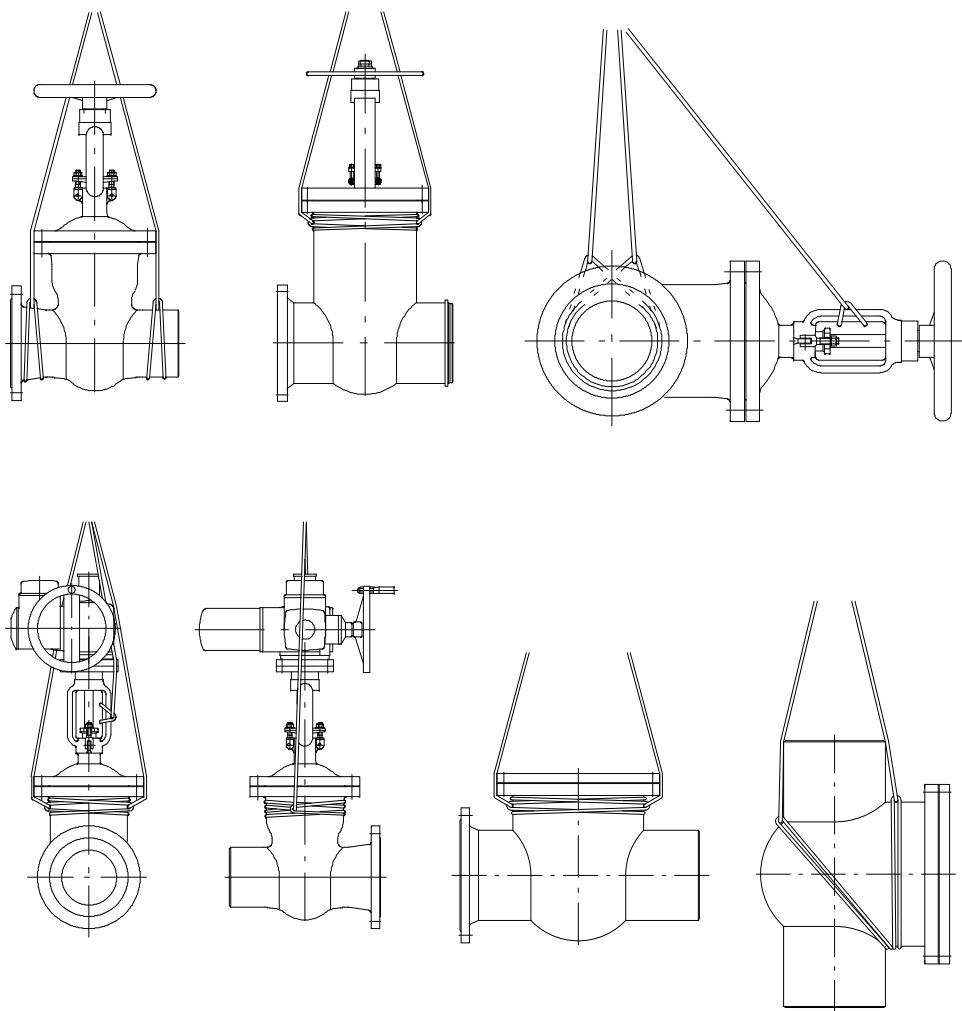

Fig. 1: Transporting the valve

3.3 Storage/preservation

If commissioning is to take place some time after delivery, we recommend that the following measures be taken for storing the valve:

CAUTION	
Incorrect storage	
	<p>Damage to the valve due to dirt, corrosion, moisture and/or frost!</p> <ul style="list-style-type: none">▷ Store the valve in a dust- and vibration-free, frost-proof room where the atmospheric humidity is as constant as possible (use suitable caps or film for protection).▷ Close the valve using little force and store in the closed position.▷ Protect the valve from contact with solvents, lubricants, fuels or other chemicals.

If properly stored indoors, the equipment is protected for a maximum of 12 months.

NOTE	
	For actuated valves, also observe the actuator's operating manual.

3.4 Return to supplier

1. Drain the valve as described in the manual.
2. Always flush and clean the valve, particularly if it has been used for handling noxious, explosive, hot or other hazardous fluids.
3. If the fluids handled by the system leave residues which might lead to corrosion damage when coming into contact with atmospheric humidity, or which might ignite when coming into contact with oxygen, the valve must also be neutralised and blown through with anhydrous inert gas for drying purposes.
4. When returning valves used for handling Fluids in Group 1 always complete and enclose a certificate of decontamination.
Always indicate any safety and decontamination measures taken.

	NOTE If required, a blank certificate of decontamination can be downloaded from the following web site: www.ksb.com/certificate_of_decontamination
---	--

3.5 Disposal

	⚠ WARNING Fluids, consumables and supplies which are hot and/or pose a health hazard Hazard to persons and the environment! <ul style="list-style-type: none">▷ Collect and properly dispose of flushing fluid and any residues of the fluid handled.▷ Wear safety clothing and a protective mask if required.▷ Observe all legal regulations on the disposal of fluids posing a health hazard.
---	---

1. Dismantle the valve.
Collect greases and other lubricants during dismantling.
2. Separate and sort the valve materials, e.g. by:
 - Metals
 - Plastics
 - Electronic waste
 - Greases and other lubricants
3. Dispose of materials in accordance with current regulations or in another controlled manner.

4 Valve Description

4.1 General description

The sectional drawings below provide examples of the general design/configuration of the valve. For additional and more detailed information, refer to the respective type series booklet.

4.2 Marking

Table 4: General marking

Parameter	Value/Marking
Nominal size	NPS (inch) ...
Nominal pressure class	Class ...
Manufacturer	KSB
Type series/Model	ECOLINE...
Year of construction	20..
Material
Flow direction arrow	→
Traceability of the material
CE markingPED	CE
Identification number of the notified body	0036
Customer's marking	e.g. plant/system No., etc.

The CE marking on the valve indicates that it is in conformity with the European Pressure Equipment Directive 97/23/EC.

Fluids in Groups 1 and 2

Class	PN	DN								
		≤25	32	40	50	65	80	100	125	150
150	10									
	16									
≥300	25									
	≥40	CE								

Fluid groups Group 1 comprises fluids defined as

- Explosive
- Extremely flammable
- Highly flammable
- Flammable: The maximum allowable temperature is above flashpoint
- Very toxic
- Toxic
- Oxidising

Group 2 comprises all other fluids not referred to in Group 1.

4.3 Globe Valves to ANSI/ASME with Gland Packing

4.3.1 ECOLINE GLC 150-600

4.3.1.1 Operating data

Table 5: Operating properties

Characteristic	Value
Nominal pressure	Class 150 - 600
Nominal size	NPS 2" - 12"
Max. permissible pressure	106 bar / 1500 PSI
Min. permissible temperature	0 °C / 32 °F
Max. permissible temperature	816 °C / 1500 °F

Temperatures < 0 °C on request

Selection as per pressure/temperature ratings (⇒ Section 4.3.1.4, Page 16)

4.3.1.2 Fluids handled

- Steam
- Fluids containing gas
- Fluids containing mineral oils
- Gas
- High-temperature hot water
- Feed water
- Oil

4.3.1.3 Design details

Design

- Globe valve to BS 1873
- Tested to API 598
- Body made of cast steel or stainless steel
- Bolted bonnet
- Outside screw
- Rotating stem
- Non-rotating stem (8" and 10" Class 300/600)
- Rising stem
- Stem with burnished shank
- Solid flat disc (plug-type valve disc for 8" and 10" Class 600)
- Stem sealed by gland packing
- Two-piece self-aligning gland follower
- Stem nut made of nickel steel
- Valve seat made of wear-resistant and corrosion-proof materials
- Back seat
- Hardened back seat bush
- Die-moulded graphite gland packing, packing end rings made of braided graphite
- Stainless steel/graphite gaskets
- Outside yoke
- Yoke head suitable for mounting electric and pneumatic actuators (DIN ISO 5210)
- The valves satisfy the safety requirements of Annex I of the European Pressure Equipment Directive 97/23/EC (PED) for fluids in Groups 1 and 2.
- The valves do not have a potential internal source of ignition and can be used in potentially explosive atmospheres, Group II, category 2 (zones 1+21) and category 3 (zones 2+22) to ATEX 2014/34/EU.

Variants

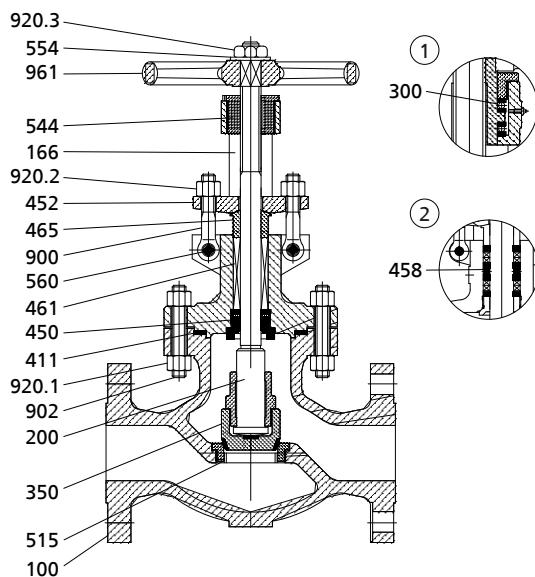

- Position indicator
- Limit switch(es)
- Locking device
- Throttling plug
- Hard-faced back seat
- Drain plug
- Bypass
- Version in compliance with TA-Luft (German Clean Air Act) to VDI 2440 for temperatures up to 400 °C
- Version with free stem end and top flange to ISO 5210
- Gearboxes
- Electric actuators
- Non-destructive testing, e.g. radiographic testing
- Inspections to technical codes such as AD2000 or IBR
- NACE standard
- Other flanged end designs or butt weld ends to ASME B16.25
- Larger nominal sizes and other variants on request

4.3.1.6 Function

The main components of the globe valves are the body (100), the yoke (166), the valve disc (350), the stem (200) and the actuating unit.

Stem seal The gland packing (461), which seals off the stem (200), is tightened via the gland follower (452) by means of eyebolts (900) and nuts (920.2). The yoke (166) is equipped with a back seat bush (450) which seals off the valve when the stem (200) is fully retracted.

Seat/disc interface The hard-faced seat ring (515) is welded into the body (100). The seating surface of the valve disc (350) is hard-faced.

Bonnet/cover seal The body (100) and the yoke (166) are connected by studs (902) and nuts (920.1). The joint is sealed by means of a joint ring (411).

4.3.2 ECOLINE GLF 150-600

4.3.2.1 Operating data

Table 11: Operating properties

Characteristic	Value
Nominal pressure	Class 150 - 600
Nominal size	NPS ½" - 2"
Max. permissible pressure	104 bar / 1480 PSI
Min. permissible temperature	0 °C / 32 °F
Max. permissible temperature	816 °C / 1500 °F

Temperatures < 0 °C on request

Selection as per pressure/temperature ratings (⇒ Section 4.3.2.4, Page 20)

4.3.2.2 Fluids handled

- Steam
- Fluids containing gas
- Gas
- High-temperature hot water
- Fluids containing mineral oils
- Oil
- Feed water

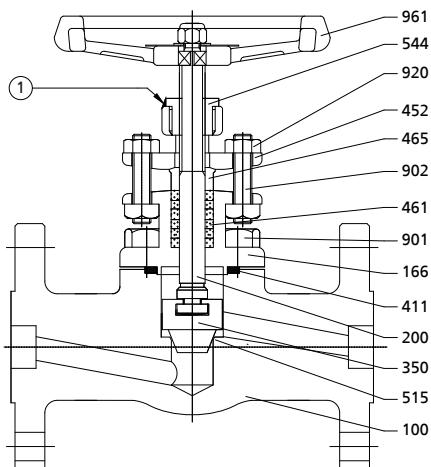

4.3.2.3 Design details**Design**

- Globe valve to API 602
- Tested to API 598
- Body made of forged steel
- Bolted bonnet
- Outside screw
- Outside yoke
- Rotating stem
- Rising handwheel
- Stem sealed by gland packing
- Reduced bore
- Two-piece self-aligning gland follower
- Graphite gland packing
- Stem with burnished shank
- Fully confined bonnet gasket
- Back seat
- Solid valve disc
- Integral seat - ST6 (HF)
- The valves satisfy the safety requirements of Annex I of the European Pressure Equipment Directive 97/23/EC (PED) for fluids in Groups 1 and 2.
- The valves do not have a potential internal source of ignition and can be used in potentially explosive atmospheres, Group II, category 2 (zones 1+21) and category 3 (zones 2+22) to ATEX 2014/34/EU.

Variants

- Seal-welded body/bonnet joint
- Full bore
- Hard-faced back seat
- Extended bonnet
- Locking device
- Position indicator
- Electric actuators
- Version in compliance with TA-Luft (German Clean Air Act) to VDI 2440 for temperatures up to 400 °C
- Butt weld ends
- NACE standard
- Other flanged end designs or butt weld ends to ASME B16.25
- Other trims

4.3.2.6 Function

The main components of the globe valves are the body (100), the yoke (166), the valve disc (351), the stem (200) and the actuating unit.

Stem seal The gland packing (461), which seals off the stem (200), is tightened via the gland follower (452) by means of studs (902) and nuts (920). The yoke (166) features an integral back seat which seals off the valve when the stem (200) is fully retracted.

Seat/disc interface The integral seating surfaces in the body (100) are hard-faced. The valve disc (351) is connected to the stem (200) by a "T" joint.

Bonnet/cover seal The yoke (166) is bolted to the body (100). The joint is sealed by a joint ring (411).

- Steam
- Fluids containing gas
- Gas
- High-temperature hot water
- Fluids containing mineral oils
- Oil
- Feed water

4.3.3.3 Design details

Design

- Globe valve to API 602
- Tested to API 598
- Body made of forged steel
- Bolted bonnet (Class 800)
- Welded bonnet
- Outside screw
- Outside yoke
- Rotating stem
- Rising handwheel
- Stem sealed by gland packing
- Reduced bore
- Two-piece self-aligning gland follower
- Graphite gland packing
- Stem with burnished shank
- Fully confined bonnet gasket (Class 800)
- Back seat
- Solid valve disc
- Integral seat - ST6 (HF)
- The valves satisfy the safety requirements of Annex I of the European Pressure Equipment Directive 97/23/EC (PED) for fluids in Groups 1 and 2.
- The valves do not have a potential internal source of ignition and can be used in potentially explosive atmospheres, Group II, category 2 (zones 1+21) and category 3 (zones 2+22) to ATEX 2014/34/EU.

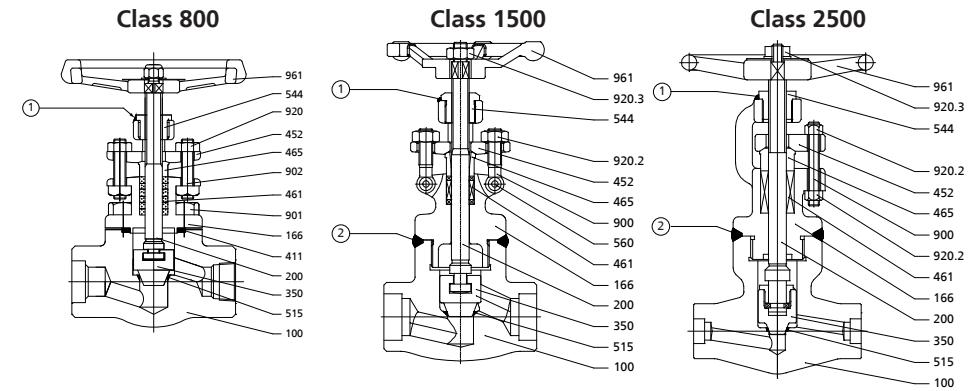

Variants

- Full bore
- Hard-faced back seat
- Extended bonnet
- Locking device
- Position indicator
- Electric actuators
- Version in compliance with TA-Luft (German Clean Air Act) to VDI 2440 for temperatures up to 400 °C
- Butt weld ends
- NACE standard
- Other threaded ends or butt weld ends to ASME B16.25
- Other trims
- Other material variants

4.3.3.6 Function

The main components of the globe valves are the body (100), the yoke (166), the valve disc (351), the stem (200) and the actuating unit.

Stem seal The gland packing (461), which seals off the stem (200), is tightened via the gland follower (452) by means of studs (902) and nuts (920). The yoke (166) features an integral back seat which seals off the valve when the stem (200) is fully retracted.

Seat/disc interface The integral seating surfaces in the body (100) are hard-faced. The valve disc (351) is connected to the stem (200) by a "T" joint.

Bonnet/cover seal On Class 800 valves, the yoke (166) is bolted to the body (100). The joint is sealed by a joint ring (411). On Class 1500 and Class 2500 valves, the yoke (166) is screwed into the body (100) and the joint is seal-welded.

4.3.4 ECOLINE GLV 150-300

4.3.4.1 Operating data

Table 21: Operating properties

Characteristic	Value
Nominal pressure	Class 150 - 300
Nominal size	NPS 2" - 12"
Max. permissible pressure	50 bar / 720 PSI
Min. permissible temperature	0 °C / 32 °F
Max. permissible temperature	816 °C / 1500 °F

Temperatures < 0 °C on request

4.3.4.2 Fluids handled

- Steam
- Gas
- Fluids containing gas
- High-temperature hot water
- Fluids containing mineral oils
- Oil
- Feed water

4.3.4.3 Design details

Design

- Globe valve to ASME B16.34
- Tested to API 598
- Compact design to API 603
- Valve made of corrosion-resistant materials
- Body made of stainless steel
- Bolted bonnet
- Outside screw
- Rotating stem
- Stem with burnished shank
- Stem nut made of nickel steel
- Rising handwheel
- Outside yoke
- Yoke head suitable for mounting electric and pneumatic actuators (DIN ISO 5210)
- Fully confined bonnet gasket
- Stem sealed by gland packing
- Two-piece self-aligning gland follower
- Die-moulded graphite gland packing, packing end rings made of braided graphite
- Stainless steel/graphite gaskets
- Back seat
- Integrated seat ring
- Minimum wall thickness as per ASME B16.34
- The valves satisfy the safety requirements of Annex I of the European Pressure Equipment Directive 97/23/EC (PED) for fluids in Groups 1 and 2.
- The valves do not have a potential internal source of ignition and can be used in potentially explosive atmospheres, Group II, category 2 (zones 1+21) and category 3 (zones 2+22) to ATEX 2014/34/EU.

Variants

- Hard-faced back seat
- Hard-faced sealing surface (single or double)
- PTFE packing
- PTFE gasket
- Drain plug
- Locking device
- Position indicator
- Limit switches
- Grease-free version
- Version with free stem end and top flange to ISO 5210
- Gearboxes
- Electric actuators
- Non-destructive testing, e.g. radiographic testing
- NACE standard
- Other flange designs
- Larger nominal sizes and other variants on request

4.3.4.6 Function

The main components of the globe valves are the body (100), the yoke (166), the valve disc (350), the stem (200) and the actuating unit.

Stem seal The gland packing (461), which seals off the stem (200), is tightened via the gland follower (452) by means of eyebolts (900) and nuts (920.3). The yoke (166) features an integral back seat which seals off the valve when the stem (200) is fully retracted.

Seat/disc interface The seat ring is an integral part of the body (100). The seating surface of the valve disc (350) is machined.

Bonnet/cover seal The body (100) and the yoke (166) are connected by studs (902) and nuts (920.2). The joint is sealed by means of a joint ring (411).

- Oil
- Feed water
- Other fluids on request.

4.4.1.3 Design details**Design**

- Valve design to BS 1873 and MSS SP-117
- On/off disc
- Bolted bonnet
- Outside screw
- Outside yoke
- Integrated seat ring
- Metal-seated
- Rising stem
- Non-rising handwheel
- Graphite gland packing
- Stainless steel/graphite gaskets
- Travel stop
- Stem sealed by double-walled bellows and back-up gland packing
- Positive anti-rotation feature between stem and bellows
- Position indicator
- The valves satisfy the safety requirements of Annex I of the European Pressure Equipment Directive 97/23/EC (PED) for fluids in Groups 1 and 2.
- The valves do not have a potential internal source of ignition and can be used in potentially explosive atmospheres, Group II, category 2 (zones 1+21) and category 3 (zones 2+22) to ATEX 2014/34/EU.

Variants

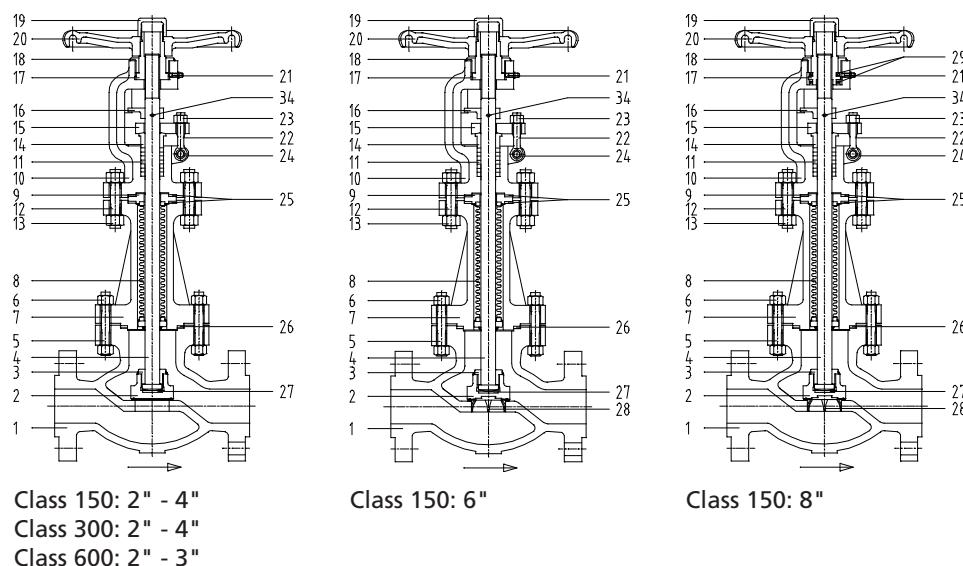

- Locking device
- Limit switch(es)
- Version with free stem end and top flange to ISO 5210
- NACE standard
- Electric actuators
- Seal-welded body/bonnet joint
- Leakage monitoring hole in the gland packing area
- Replaceable seat ring
- Version in compliance with TA-Luft (German Clean Air Act) to VDI 2440 for temperatures up to 400 °C
- Other flanged end designs or butt weld ends to ASME B16.25

4.4.1.6 Function

The main components of the globe valves are the pressure-retaining parts, i.e. the body (1) and the bonnet (7), and the functional unit.

The body (1) and the bonnet (7) are connected by studs (5), and the joint is sealed to atmosphere by the gasket (26).

The functional unit consists of the valve disc (2), the stem (4) and the bellows (8). The actuating unit is a handwheel (20) or actuator.

The stem (4) passage through the bonnet (7) is sealed off by the bellows (8). The back-up gland packing (11) is tightened by means of two eyebolts (22) and nuts (23). The bellows-type stem seal is maintenance-free.

The seating surfaces of the body seat and the valve disc (30) are made of stainless materials. The handwheel (20) is mounted on the square or hexagon of the stem nut (17) and secured with a threaded ring (18).

4.4.2 ECOLINE GLB 800

4.4.2.1 Operating data

Table 31: Operating properties

Characteristic	Value
Nominal pressure	Class 150 - 800
Nominal size	NPS ½" - 2"
Max. permissible pressure	136 bar
Min. permissible temperature	0 °C
Max. permissible temperature	427 °C

Temperatures < 0 °C on request

Selection as per pressure/temperature ratings (⇒ Section 4.4.2.4, Page 37)

4.4.2.2 Fluids handled

- Steam
- Explosive fluids
- Combustible fluids
- Liquids containing gas or vapour
- Gas
- Fluids posing a health hazard
- Toxic fluids
- High-temperature hot water
- Highly aggressive fluids
- Condensate
- Corrosive fluids
- Valuable fluids
- Volatile fluids
- Fluids containing mineral oils
- Oil
- Feed water
- Thermal oil
- Other fluids on request.

4.4.2.3 Design details**Design**

- Valve design to ASME B16.34, API 602 and MSS SP-117
- Bolted bonnet
- Outside screw
- Outside yoke
- Reduced bore
- Tapered valve disc
- Integrated seat ring
- Metal-seated
- Rising stem
- Graphite gland packing
- Stainless steel/graphite gaskets
- Travel stop
- Guided valve disc
- Stem sealed by double-walled bellows and back-up gland packing
- Positive anti-rotation feature between stem and bellows
- The valves satisfy the safety requirements of Annex I of the European Pressure Equipment Directive 97/23/EC (PED) for fluids in Groups 1 and 2.
- The valves do not have a potential internal source of ignition and can be used in potentially explosive atmospheres, Group II, category 2 (zones 1+21) and category 3 (zones 2+22) to ATEX 2014/34/EU.

Variants

- Throttling plug
- Needle valve disc
- Full bore
- PTFE gasket (up to 200 °C)
- PTFE gland packing (up to 200 °C)
- Locking device
- Limit switch(es)
- Position indicator
- Seal-welded body/bonnet joint
- Stellited seat/disc interface
- Version with free stem end and top flange to ISO 5210
- Y-pattern
- Body extension with nipple
- NACE standard
- Version in compliance with TA-Luft (German Clean Air Act) to VDI 2440 for temperatures up to 400 °C
- Electric actuators
- Other flanged end designs or butt weld ends to ASME B16.25

4.4.2.6 Function

The main components of the globe valves are the pressure-retaining parts, i.e. the body (1) and the bonnet (6), and the functional unit.

The body (1) and the bonnet (6) are connected by bolts (7), and the joint is sealed to atmosphere by the gasket (5).

The functional unit consists of the valve disc (2), the stem (3) and the bellows (4). The actuating unit is a handwheel (16) or actuator.

The stem (3) passage through the bonnet (6) is sealed off by the bellows (4). The back-up gland packing (8) is tightened by means of two eyebolts (11) and nuts (13). The bellows-type stem seal is maintenance-free.

The seating surfaces of the body seat and the valve disc (2) are made of stainless materials. The handwheel (16) is mounted on the square or hexagon of the stem nut (14) and secured with a nut (17).

4.5 Gate Valves to ANSI/ASME

4.5.1 ECOLINE GTC 150-600

4.5.1.1 Operating data

Table 35: Operating properties

Characteristic	Value
Nominal pressure	Class 150 - 600
Nominal size	NPS 2" - 36"
Max. permissible pressure	106 bar / 1500 PSI
Min. permissible temperature	0 °C / 32 °F
Max. permissible temperature	816 °C / 1500 °F

Temperatures < 0 °C on request

Selection as per pressure/temperature ratings (⇒ Section 4.5.1.4, Page 40)

4.5.1.2 Fluids handled

- Steam
- Fluids containing gas
- Gas
- High-temperature hot water
- Feed water

4.5.1.3 Design details**Design**

- Gate valve to API 600-2009
- Tested to API 598
- Body made of cast steel or stainless steel
- Flexible wedge
- Bolted bonnet
- Non-rotating stem
- Non-rising handwheel
- Stem sealed by gland packing
- Two-piece self-aligning gland follower
- Die-moulded graphite gland packing, packing end rings made of braided graphite
- Stainless steel/graphite gaskets
- Stem with burnished shank
- Stem nut made of nickel steel
- Outside screw
- Sealing surfaces made of wear and corrosion resistant materials
- Back seat
- Hardened back seat bush
- Outside yoke
- Yoke head suitable for mounting electric and pneumatic actuators (DIN ISO 5210)
- The valves satisfy the safety requirements of Annex I of the European Pressure Equipment Directive 97/23/EC (PED) for fluids in Groups 1 and 2.
- The valves do not have a potential internal source of ignition and can be used in potentially explosive atmospheres, Group II, category 2 (zones 1+21) and category 3 (zones 2+22) to ATEX 2014/34/EU.

Variants

- Limit switch(es)
- Locking device
- Stem protecting tube
- Stem protecting tube with position indicator
- Drain plug
- Hard-faced back seat
- Pressure relief arrangement
- Bypass
- Version with free stem end and top flange to ISO 5210
- Gearboxes
- Electric actuators
- Version in compliance with TA-Luft (German Clean Air Act) to VDI 2440 for temperatures up to 400 °C
- Non-destructive testing, e.g. radiographic testing
- Inspections to technical codes such as AD2000 or IBR
- Gate valve to API 600-2015
- NACE standard
- Other flanged end designs or butt weld ends to ASME B16.25
- Larger nominal sizes and other variants on request

4.5.1.6 Function

The main components of the gate valves are the body (100), the yoke (166), the flexible wedge (361), the stem (200) and the actuating unit.

- Stem seal** The gland packing (461), which seals off the stem (200), is tightened via the gland follower (452) by means of eyebolts (900) and nuts (920.2). The yoke (166) is equipped with a back seat bush (450) which seals off the valve when the stem (200) is fully retracted.
- Seat/disc interface** The hard-faced seat rings (515) are welded into the body (100). The seating surfaces of the flexible wedge (361) are hard-faced. The flexible wedge (361) is fastened to the stem (200) by a "T" joint and guided by lateral guide bars in the body (100).
- Bonnet/cover seal** The body (100) and the yoke (166) are connected by studs (902.1) and nuts (920.1). The joint is sealed by means of a joint ring (411).

4.5.2.1 Operating data

Table 41: Operating properties

Characteristic	Value
Nominal pressure	Class 150 - 600
Nominal size	NPS ½" - 2"
Max. permissible pressure	104 bar / 1480 PSI
Min. permissible temperature	0 °C / 32 °F
Max. permissible temperature	816 °C / 1500 °F

Temperatures < 0 °C on request

Selection as per pressure/temperature ratings (⇒ Section 4.5.2.4, Page 44)

4.5.2.2 Fluids handled

- Steam
- Fluids containing gas
- Gas
- High-temperature hot water
- Feed water

4.5.2.3 Design details

Design

- Gate valve to API 602
- Tested to API 598
- Body made of forged steel
- Bolted bonnet
- Outside screw
- Outside yoke
- Non-rotating stem
- Stem sealed by gland packing
- Non-rising handwheel
- Reduced bore
- Two-piece self-aligning gland follower
- Graphite gland packing
- Stem with burnished shank
- Fully confined bonnet gasket
- Back seat
- Solid wedge
- The valves satisfy the safety requirements of Annex I of the European Pressure Equipment Directive 97/23/EC (PED) for fluids in Groups 1 and 2.
- The valves do not have a potential internal source of ignition and can be used in potentially explosive atmospheres, Group II, category 2 (zones 1+21) and category 3 (zones 2+22) to ATEX 2014/34/EU.

Variants

- Seal-welded body/bonnet joint
- Full bore
- Hard-faced back seat
- Extended bonnet
- Locking device
- Position indicator
- Electric actuators
- Version in compliance with TA-Luft (German Clean Air Act) to VDI 2440 for temperatures up to 400 °C
- Butt weld ends
- NACE standard
- Other flanged end designs or butt weld ends to ASME B16.25
- Other trims

4.5.2.4 Pressure/temperature ratings

4.5.3.6 Function

The main components of the gate valves are the body (100), the yoke (166), the wedge (360), the stem (200) and the actuating unit.

Stem seal The gland packing (461), which seals off the stem (200), is tightened via the gland follower (452) by means of studs (902) and nuts (920). The yoke (166) features an integral back seat which seals off the valve when the stem (200) is fully retracted.

Seat/disc interface The integral seating surfaces in the body (100) are hard-faced. The wedge (351) is connected to the stem (200) by a "T" joint.

Bonnet/cover seal On Class 800 valves, the yoke (166) is bolted to the body (100). The joint is sealed by a joint ring (411). On Class 1500 and Class 2500 valves, the yoke (166) is screwed into the body (100) and the joint is seal-welded.

Table 51: Operating properties

Characteristic	Value
Nominal pressure	Class 150 - 300
Nominal size	NPS 2" - 12"
Max. permissible pressure	50 bar / 720 PSI
Min. permissible temperature	0 °C / 32 °F
Max. permissible temperature	816 °C / 1500 °F

Temperatures < 0 °C on request

Selection as per pressure/temperature ratings (⇒ Section 4.5.4.4, Page 53)

4.5.4.2 Fluids handled

- Steam
- Gas
- Fluids containing gas
- High-temperature hot water
- Oil
- Feed water

4.5.4.3 Design details

Design

- Gate valve to API 603
- Tested to API 598
- Compact design to API 603
- Valve made of corrosion-resistant materials
- Body made of stainless steel
- Bolted bonnet
- Outside screw
- Outside yoke
- Yoke head suitable for mounting electric and pneumatic actuators (DIN ISO 5210)
- Non-rotating stem
- Stem with burnished shank
- Stem nut made of nickel steel
- Non-rising handwheel
- Flexible wedge
- Stem sealed by gland packing
- Two-piece self-aligning gland follower
- Die-moulded graphite gland packing, packing end rings made of braided graphite
- Stainless steel/graphite gaskets
- Back seat
- Integrated seat ring
- Minimum wall thickness to API 603
- The valves satisfy the safety requirements of Annex I of the European Pressure Equipment Directive 97/23/EC (PED) for fluids in Groups 1 and 2.
- The valves do not have a potential internal source of ignition and can be used in potentially explosive atmospheres, Group II, category 2 (zones 1+21) and category 3 (zones 2+22) to ATEX 2014/34/EU.

Variants

- Hard-faced back seat
- Hard-faced sealing surface (single or double)
- PTFE packing
- PTFE gasket
- Drain plug
- Pressure relief arrangement
- Locking device
- Limit switches
- Stem protecting tube
- Stem protecting tube with position indicator
- Gearboxes
- Electric actuators
- Grease-free version
- Version with free stem end and top flange to ISO 5210
- Non-destructive testing, e.g. radiographic testing
- NACE standard
- Other flange designs
- Larger nominal sizes and other variants on request

4.5.4.6 Function

The main components of the gate valves are the body (100), the yoke (166), the flexible wedge (361), the stem (200) and the actuating unit.

- Stem seal** The gland packing (461), which seals off the stem (200), is tightened via the gland follower (452) by means of eyebolts (900) and nuts (920.3). The yoke (166) features an integral back seat which seals off the valve when the stem (200) is fully retracted.
- Seat/disc interface** The seat ring is an integral part of the body (100). The flexible wedge (361) is fastened to the stem (200) by a "T" joint and guided by lateral guide bars in the body (100).
- Bonnet/cover seal** The body (100) and the yoke (166) are connected by studs (902) and nuts (920.2). The joint is sealed by means of a joint ring (411).

4.5.5 ECOLINE GTB 800

4.5.5.1 Operating data

Table 57: Operating properties

Characteristic	Value
Nominal pressure	Class 150 - 800
Nominal size	NPS ½" - 2"
Max. permissible pressure	136 bar
Min. permissible temperature	0 °C
Max. permissible temperature	427 °C

Temperatures < 0 °C on request

Selection as per pressure/temperature ratings (⇒ Section 4.5.5.4, Page 56)

4.5.5.2 Fluids handled

- Steam
- Explosive fluids
- Combustible fluids
- Liquids containing gas or vapour
- Gas
- Fluids posing a health hazard
- Toxic fluids
- High-temperature hot water
- Highly aggressive fluids
- Condensate
- Corrosive fluids
- Valuable fluids
- Volatile fluids
- Fluids containing mineral oils
- Oil
- Feed water
- Thermal oil
- Other fluids on request.

4.5.5.3 Design details

Design

- Valve design to ASME B16.34, API 602 and MSS SP-117
- Bolted bonnet
- Outside screw
- Outside yoke
- Reduced bore
- Single-piece wedge
- Rolled-in seat ring
- Metal-seated
- Rising stem
- Non-rotating stem
- Non-rising handwheel
- Graphite gland packing
- Stainless steel/graphite gaskets
- Travel stop
- Wedge guided in the body
- Stem sealed by double-walled bellows and back-up gland packing
- Positive anti-rotation feature between stem and bellows
- The valves satisfy the safety requirements of Annex I of the European Pressure Equipment Directive 97/23/EC (PED) for fluids in Groups 1 and 2.
- The valves do not have a potential internal source of ignition and can be used in potentially explosive atmospheres, Group II, category 2 (zones 1+21) and category 3 (zones 2+22) to ATEX 2014/34/EU.

Variants

- Full bore
- PTFE gasket (up to 200 °C)
- PTFE gland packing (up to 200 °C)
- Locking device
- Limit switch(es)
- Position indicator
- Seal-welded body/bonnet joint
- Stellited seat/disc interface
- Version with free stem end and top flange to ISO 5210
- Pressure relief hole in wedge inlet side
- Y-pattern
- Body extension with nipple
- NACE standard
- Version in compliance with TA-Luft (German Clean Air Act) to VDI 2440 for temperatures up to 400 °C
- Electric actuators
- Other flanged end designs or butt weld ends to ASME B16.25

20 ³⁷⁾³⁶⁾	Bellows	SS304	SS316L	SS316L

4.5.5.6 Function

The main components of the gate valves are the pressure-retaining parts, i.e. the body (1) and the bonnet (6), and the functional unit.

The body (1) and the bonnet (6) are connected by bolts (7), and the joint is sealed to atmosphere by the gasket (5).

The functional unit consists of the wedge (3), the stem (4) and the bellows (20). The actuating unit is a handwheel (16) or actuator.

The stem (4) passage through the bonnet (6) is sealed off by the bellows (20). The back-up gland packing (8) is tightened by means of two eyebolts (11) and nuts (13). The bellows-type stem seal is maintenance-free.

The seating surfaces of seat ring (2) and wedge (3) are made of stainless materials. The handwheel (16) is mounted on the square or hexagon of the stem nut (14) and secured with a nut (17).

4.6 Lift Check Valves to ANSI/ASME

4.6.1 ECOLINE PTF 150-600

4.6.1.1 Operating data

Table 61: Operating properties

Characteristic	Value
Nominal pressure	Class 150 - 600
Nominal size	NPS ½" - 2"
Max. permissible pressure	104 bar / 1480 PSI
Min. permissible temperature	0 °C / 32 °F
Max. permissible temperature	816 °C / 1500 °F

Temperatures < 0 °C on request

Selection as per pressure/temperature ratings (⇒ Section 4.6.1.4, Page 60)

37) Other bellows materials on request.

4.6.1.2 Fluids handled

- Steam
- Fluids containing gas
- Gas
- High-temperature hot water
- Volatile fluids
- Feed water

4.6.1.3 Design details

Design

- Lift check valve to API 602
- Tested to API 598
- Body made of forged steel
- Bolted cover
- Reduced bore
- Solid check disc
- Integral seat - ST6 (HF)
- Fully confined cover gasket
- Spring ensures reliable shut-off
- The valves satisfy the safety requirements of Annex I of the European Pressure Equipment Directive 97/23/EC (PED) for fluids in Groups 1 and 2.
- The valves do not have a potential internal source of ignition and can be used in potentially explosive atmospheres, Group II, category 2 (zones 1+21) and category 3 (zones 2+22) to ATEX 2014/34/EU.

Variants

- Seal-welded body/cover joint
- Full bore
- Butt weld ends
- Version in compliance with TA-Luft (German Clean Air Act) to VDI 2440 for temperatures up to 400 °C
- NACE standard
- Other flanged end designs or butt weld ends to ASME B16.25
- Other trims

4.7.1.3 Design details

Design

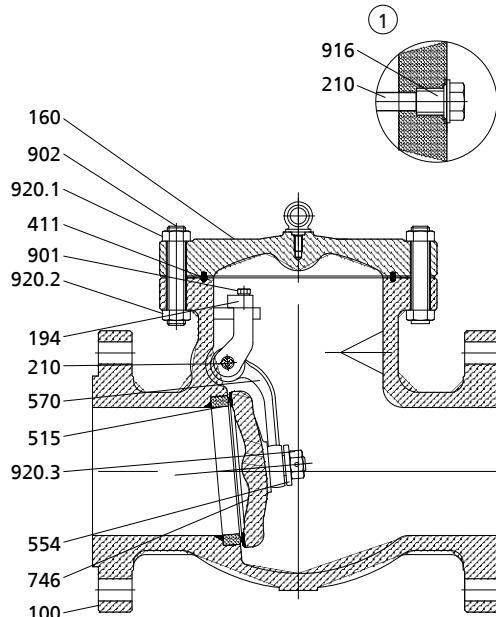

- Swing check valve to BS 1868
- Tested to API 598
- Body made of cast steel or stainless steel
- Bolted cover
- Internally mounted hinge pin up to 12"
- Externally mounted hinge pin for 14" and above
- Stainless steel/graphite gaskets
- Fully confined cover gasket
- Valve seat made of wear-resistant and corrosion-proof materials
- Disc protected against rotation
- Anti-rotation pin up to 12"
- Adjusting bolt up to 12"
- The valves satisfy the safety requirements of Annex I of the European Pressure Equipment Directive 97/23/EC (PED) for fluids in Groups 1 and 2.
- The valves do not have a potential internal source of ignition and can be used in potentially explosive atmospheres, Group II, category 2 (zones 1+21) and category 3 (zones 2+22) to ATEX 2014/34/EU.

4.7.1.6 Function

The main components of the swing check valves are the body (100), the cover (160) and the valve disc (746).

- Seat/disc interface** The hard-faced seat ring (515) is welded into the body (100). The seating surface of the valve disc (746) is hard-faced. The valve disc (746) is mounted on the hanger arm (570) by means of a nut (920.3) and pin. The hanger arm (570) pivots on a hinge pin (210) mounted inside the body (100).
- Bonnet/cover seal** The body (100) and the cover (160) are connected by studs (902.1) and nuts (920.1). The joint is sealed by means of a joint ring (411).

- Oil
- Feed water

4.7.4.3 Design details

Design

- Swing check valve to ASME B16.34
- Tested to API 598
- Compact design to API 603
- Valve made of corrosion-resistant materials
- Body made of stainless steel
- Bolted cover
- Stainless steel/graphite gaskets
- Fully confined cover gasket
- Internally mounted hinge pin
- Integrated seat ring
- Minimum wall thickness as per ASME B16.34
- The valves satisfy the safety requirements of Annex I of the European Pressure Equipment Directive 97/23/EC (PED) for fluids in Groups 1 and 2.
- The valves do not have a potential internal source of ignition and can be used in potentially explosive atmospheres, Group II, category 2 (zones 1+21) and category 3 (zones 2+22) to ATEX 2014/34/EU.

Variants

- PTFE gasket
- Grease-free version
- Non-destructive testing, e.g. radiographic testing
- NACE standard
- Other flange designs
- Larger nominal sizes and other variants on request

55) Permissible but not recommended for prolonged use above 427 °C (800 °F).

56) At temperatures over 538 °C (1000 °F), use only when carbon content is 0.04% or higher.

57) For butt weld end valves only. Flanged end ratings terminate at 538 °C (1000 °F).

		304 / 304	316 / 316	304 stainless steel	316 stainless steel
758	Screen	304 stainless steel	316 stainless steel		

4.8.1.6 Function

The main components of the strainers are the body (100), the cover (160) and the screen (758).

Flow direction The screen (758) is clamped between the body (100) and the cover (160) by means of the studs (902) and nuts (920). The screen (758) is made of grade 304 stainless steel.

Bonnet/cover seal The body (100) and the cover (160) are connected by studs (902) and nuts (920). The joint is sealed by means of a joint ring (411).

4.8.2 ECOLINE FYF 800

4.8.2.1 Operating data

Table 99: Operating properties

Characteristic	Value
Nominal pressure	Class 800
Nominal size	NPS ½" - 2"
Max. permissible pressure	141 bar / 2000 PSI
Min. permissible temperature	0 °C / 32 °F
Max. permissible temperature	816 °C / 1500 °F

Temperatures < 0 °C on request

Selection as per pressure/temperature ratings (⇒ Section 4.8.2.4, Page 81)

4.8.2.2 Fluids handled

- Steam
- Fluids containing gas
- Gas
- High-temperature hot water
- Fluids containing mineral oils
- Oil
- Feed water

4.8.2.3 Design details

Design

- Strainer to ASME B16.34
- Tested to API 598
- Y-pattern strainer
- Body made of forged steel
- Bolted cover
- Reduced bore
- Fully confined cover gasket
- Cylindrical screen made of stainless steel
- Cover equipped with screw plug
- The valves satisfy the safety requirements of Annex I of the European Pressure Equipment Directive 97/23/EC (PED) for fluids in Groups 1 and 2.
- The valves do not have a potential internal source of ignition and can be used in potentially explosive atmospheres, Group II, category 2 (zones 1+21) and category 3 (zones 2+22) to ATEX 2014/34/EU.

Variants

- PTFE gasket
- Other mesh widths on request
- Other screen materials
- NACE standard

58) At temperatures over 538 °C (1000 °F), use only when carbon content is 0.04% or higher.

4.8.2.6 Function

The main components of the strainers are the body (100), the cover (160) and the screen (758).

Flow direction The screen (758) is clamped between the body (100) and the cover (160) by means of the bolts (901).

Bonnet/cover seal The body (100) and the cover (160) are connected by bolts (901). The joint is sealed by means of a joint ring (411).

5 Installation at Site

5.1 General information/Safety regulations

The operator ensures that maintenance, inspection and installation is performed by authorised, qualified specialist personnel who are thoroughly familiar with the manual.

Responsibility for positioning and installing the valve lies with the consultant, construction company or operator/user. Planning and installation errors may impair the reliable function of the valve and pose a substantial safety hazard.

	DANGER Dead-end valve High-pressure hazard! Risk of burns! ▷ Protect the valve against unauthorised or unintentional opening.
	WARNING Cold/hot piping and/or valve Risk of thermal injury! ▷ Insulate the valve. ▷ Attach warning signs.
	WARNING Exposed rotating parts Risk of injury! ▷ Do not touch rotating parts. ▷ When the equipment is in operation, perform any work with utmost caution. ▷ Take suitable precautions, e.g. provide safety covers.
	WARNING Impermissible loads resulting from operating conditions and/or valve-mounted components, e.g. actuators Leakage from or rupture of the valve body! ▷ Provide adequate support. ▷ Additional loads, e.g. traffic, wind or earthquakes are not taken into account for standard variants; these require a separate design.
	CAUTION Condensation water forming in air-conditioning, cooling and refrigerating systems Ice forming! Blockage of actuating element! Damage due to corrosion! ▷ Insulate the valve to prevent diffusion.

	CAUTION
	Improper installation Damage to the valve! <ul style="list-style-type: none">▷ Remove the caps prior to installation.▷ Clean the mating flange faces.▷ Protect the body and bonnet/cover from any impacts.
	CAUTION Outdoor installation Damage due to corrosion! <ul style="list-style-type: none">▷ Protect the valve appropriately against moisture.
	CAUTION Painting of pipes Impairment of the valve's function and loss of information! <ul style="list-style-type: none">▷ Protect stem and plastic components prior to applying paint.▷ Protect printed name plates prior to applying paint.
	CAUTION Impermissible load Damage to the actuating element! <ul style="list-style-type: none">▷ Do not use the valve as a foothold.
	NOTE For the valves to reach the documented Kv values, the flow direction must correspond to the flow direction arrow.
	NOTE The mating flange faces must be clean and undamaged and the gaskets on the mating flanges must be properly centred.
	NOTE Use an appropriate tool to evenly tighten the bolts crosswise, applying the permissible torques.

5.2 Installation position and location

Valves marked with a flow direction arrow must be installed such that the flow direction of the fluid corresponds to the direction shown by the arrow on the valve body.

Gate valves Any installation position can be chosen for gate valves. For gate valves installed in horizontal pipes a vertical stem position is recommended (handwheel or actuator on top). Installation with the stem in a horizontal or inclined position (e.g. in a vertical pipe) is permitted; in this case, however, the actuator must be adequately supported.

Globe valves Globe valves can be installed in any position unless specified otherwise. The best installation position is with the stem pointing vertically upwards. Installation with the stem in a horizontal or inclined position (e.g. in a vertical pipe) is permitted; in this case, however, the actuator must be adequately supported.

Swing check valves	Preferably install swing check valves in horizontal pipes. When installing them in vertical pipes, make sure that the flow direction is upward. In the unpressurised condition, the valve disc will then be closed by its own weight.
Lift check valves	The valves must be installed in such a manner that the fluid enters the valve beneath valve disc 351 and flows out above the valve disc. Valves without a spring can only be installed in a vertical position, i.e. in horizontal pipes and with the cover pointing upwards.
Strainers	Strainers can be installed in horizontal or vertical pipes. The fluid must always enter through the screen inlet. Flow through strainers installed in vertical pipes must always be downwards.
Installation location	The valve must not be fitted downstream of tees and level and three-dimensional double bends.

5.3 Welding into the pipeline

Responsibility for welding the valve into the piping and for any heat treatment required lies with the commissioned construction company or the plant operator.

	CAUTION
	Weld beads, scale and other impurities Damage to the valve! <ul style="list-style-type: none">▷ Take suitable measures to protect the valve against impurities.▷ Remove any impurities from the piping.▷ If necessary, install a strainer.
	CAUTION Incorrect earthing during welding work on the piping Damage to the valve (scorching)! <ul style="list-style-type: none">▷ Open the valve during welding.▷ Never earth the electric welding equipment on the valve's functional parts.
	CAUTION Non-compliance with the max. permissible application temperature Damage to the valve! <ul style="list-style-type: none">▷ Complete the weld seam in several steps to ensure that the temperature in the middle of the body does not exceed the max. permissible application temperature.
	NOTE For valves with socket weld ends, comply with the insertion depth given in the applicable technical code. A gap between the pipe end and the base of the weld socket prevents impermissible stress on the weld.

5.4 Valves with actuator

Install valves with transmission gear and/or actuators with the stem in the vertical position. If this requirement cannot be met, adequately support the actuator on site or consult KSB.

Mounted actuators are factory-set and ready for operation. Changes to these settings, e.g. changes to the set switching points of the limit positions, may impair the valve's function and result in damage to the actuator, valve or the system.

	DANGER Unqualified personnel performing work on valves with actuator Danger of death from electric shock! <ul style="list-style-type: none">▷ Ensure that the connection to the power supply and the process control system is performed by a trained electrician.▷ Observe regulations IEC 60364 and, for explosion-proof models, EN 60079.
	DANGER Work on valves with energy storage, e.g. spring mechanisms or compressed air storage Danger to life resulting from incorrect assembly <ul style="list-style-type: none">▷ Ensure that work on the actuator is performed by qualified specialist personnel.▷ Mount/remove the actuator in accordance with the operating manual.
	NOTE If the valves are fitted with actuators, ensure that the actuator's operating manual is also observed.

On valves with electric, pneumatic or hydraulic actuators, the actuator strokes/forces must be limited.

Electric actuators Electric actuators are ready for operation and wired as follows:

- Valve "CLOSED": travel-dependent
- Valve "OPEN": travel-dependent

The wiring diagrams are located in the terminal boxes.

Pneumatic/hydraulic actuators For pneumatic or hydraulic actuators, the control pressures specified in the order confirmation must be observed. Non-observance may damage the actuator.

If required, consult the manufacturer for closing and opening torques or actuating forces.

5.5 Insulation

	NOTE Any insulation fitted on the valve must not impair the valve's function. The sealing areas at the cover/bonnet joint and at the stem passage (gland packing) must be directly accessible and visible.
---	--

6 Commissioning/Start-up/Shutdown

6.1 Commissioning/Start-up

6.1.1 Prerequisites for commissioning/start-up

Before commissioning/start-up of the valve, ensure that the following requirements are met:

- The material, pressure and temperature data on the valve complies with the operating conditions of the piping. (⇒ Section 4, Page 13).
- The material's chemical resistance and stability under load have been checked.

The nominal pressure classes only apply at room temperature. For values for higher temperatures, refer to the pressure/temperature ratings tables.

(⇒ Section 4, Page 13). Using the valve in conditions deviating from those specified will lead to overload which the valves cannot withstand.

	CAUTION
Welding beads, scale and other impurities in the piping Damage to the valve! <ul style="list-style-type: none">▷ Remove any impurities from the piping.▷ If necessary, install a strainer.	
	<ol style="list-style-type: none">1. Thoroughly clean, flush and blow through all vessels, pipelines and connections (especially of new installations).2. Remove the valve's flange covers before installing it in the piping.3. Check that the inside of the valve is free from any foreign objects. Remove any foreign objects.4. If required, install a strainer in the piping.
	DANGER Surge pressure/water hammer potentially occurring at high temperatures Danger to life caused by burns or scalds! <ul style="list-style-type: none">▷ The max. permissible valve pressure must not be exceeded (⇒ Section 4, Page 13).▷ Use valves made of nodular cast iron or steel.▷ Operator shall provide general safety measures for the system.
	CAUTION Aggressive flushing and pickling agents Damage to the valve! <ul style="list-style-type: none">▷ Match the cleaning operation mode and duration of flushing and pickling to the body and seal materials used.▷ Responsibility for the compatibility of the pickling media used and the pickling procedure itself lies with the pickling company.

Functional check The following functions must be checked:

1. Check the shut-off function of the installed valve prior to commissioning/start-up by opening and closing it several times.
2. Check the gland packing (461) for leakage when it is subjected to full operating pressure and temperature for the first time.
3. If the gland follower (452) is loose, evenly re-tighten the nuts (920.1).

4. Check the bonnet/cover bolting (902.1/920.1) and the joint ring (411.1) for tightness after the valve has been subjected to load conditions or heated up for the first time.
5. To avoid stress or distortion, open the valve by several counter-clockwise handwheel turns.
6. If the bonnet/cover bolting (902.1/920.1) has loosened, evenly re-tighten it crosswise.

	NOTE
Re-tightening the bonnet/cover bolting is particularly important for valves operated at temperatures exceeding 200 °C.	

Valves with actuator On valves with electric, pneumatic or hydraulic actuators, the actuator strokes/forces must be limited.

	DANGER
Unqualified personnel performing work on valves with actuator Danger of death from electric shock! <ul style="list-style-type: none">▷ Ensure that the connection to the power supply and the process control system is performed by a trained electrician.▷ Observe regulations IEC 60364 and, for explosion-proof models, EN 60079.	

	WARNING
Incorrect connection to the mains Damage to the mains network, short circuit! <ul style="list-style-type: none">▷ Observe the technical specifications of the local energy supply companies.	

	NOTE
If the valves are fitted with actuators, ensure that the actuator's operating manual is also observed.	

1. Check the available mains voltage against the data on the name plate of the actuator.
2. Select an appropriate start-up method.

Electric actuators are ready for operation and wired as follows:

- Valve "CLOSED": torque-dependent
- Valve "OPEN": travel-dependent

The wiring diagrams are located in the terminal boxes.

For pneumatic or hydraulic actuators, the control pressures specified in the order confirmation must be observed. Non-observance may damage the actuator.

If required, consult the manufacturer for closing and opening torques or actuating forces.

6.1.2 Valve actuation

	NOTE
Viewed from above, the valve is closed by turning the handwheel in clockwise direction, and opened by turning the handwheel in counter-clockwise direction. Direction symbols are found on the top of the handwheel.	

	NOTE <p>Globe valves are normally used in either "fully open" or "fully closed" position. For control functions, valves should be fitted with throttling plugs, unless throttling plugs are installed as standard.</p>
	CAUTION Excessively long idle periods Damage to the valve! ▷ Check the function by opening and closing the valve at least once or twice a year.
	CAUTION Vibration Excessive wear or damage to the valve! ▷ Change the system parameters. ▷ Use throttling plugs or V-port plugs in throttling applications to minimise vibration.
	CAUTION Use of levers Damage to the valve as a result of excessive forces! ▷ Only actuate handwheel-operated valves by hand. ▷ Levers may only be used in exceptional cases and in compliance with the following tables. ▷ Do not use levers in the area of the position indicator.

6.2 Shutdown

6.2.1 Measures to be taken for shutdown

During prolonged shutdown periods, ensure that the following conditions are met:

1. Drain fluids which change their physical condition due to changes in concentration, polymerisation, crystallisation, solidification, etc. from the piping.
2. If required, flush the piping with the valves fully opened.

7 Servicing/Maintenance

7.1 Safety regulations

The operator ensures that maintenance, inspection and installation is performed by authorised, qualified specialist personnel who are thoroughly familiar with the manual.

	<p>DANGER</p> <p>Valve under pressure</p> <p>High-pressure hazard!</p> <p>Leakage of hot and/or toxic fluids!</p> <p>Risk of burns!</p> <ul style="list-style-type: none">▷ The valve and its surrounding system must be depressurised prior to any maintenance and installation work.▷ If the bellows are defective or fluid escapes, ensure the valve is depressurised.▷ Ensure the valve is depressurised before removing any drain, opening or vent plugs.▷ Allow the valve to cool down so that the temperature is below the fluid's vaporisation temperature in all areas in contact with the fluid in order to effectively prevent any risk of scalding.▷ Never vent the valve by removing the bonnet/cover bolting or gland packing.▷ Use appropriate spare parts and tools, even in emergencies.
--	--

	<p>WARNING</p> <p>Fluids, consumables and supplies which are hot and/or pose a health hazard</p> <p>Risk of injury!</p> <ul style="list-style-type: none">▷ Observe all relevant laws.▷ When draining the fluid take appropriate measures to protect persons and the environment.▷ Decontaminate valves used for handling fluids posing a health hazard.
--	--

	<p>NOTE</p> <p>Before removing the valve from the piping, ensure that the pipe has been taken out of service and released for repair/maintenance work.</p>
--	---

	<p>NOTE</p> <p>All maintenance, service and installation work can be carried out by KSB Service or authorised workshops. For contact details please refer to the enclosed "Addresses" booklet or visit "www.ksb.com/contact" on the Internet.</p>
--	---

Never use force when dismantling and reassembling the valve.

7.2 Maintenance

This valve has been designed to be largely maintenance-free. The materials of the sliding parts have been selected for minimum wear.

	NOTE
The user is responsible for defining appropriate intervals for checks and maintenance, depending on the application of the valve.	
	NOTE
If several valves are serviced at the same time, take appropriate measures to prevent the dismantled parts from getting mixed up.	

The service life can be extended by taking the following measures:

- Check the function by opening and closing the valve at least once or twice a year.
- Lubricate the moving parts such as stem (200) and gland bolts (not for oxygen valves) using appropriate lubricants (e.g. lubricants suitable for high temperatures).
- Add or replace packing rings in the gland packing (461) in a timely manner.
- Re-tighten or replace the bonnet/cover gasket (411.1) in a timely manner.

Testing overhauled valves After reassembly and prior to commissioning/start-up, the valves must be subjected to shell and leak testing to DIN EN 12266-1.

8 Trouble-shooting

	WARNING
	<p>Improper remedial work on the valve Risk of injury!</p> <p>▷ For any work performed in order to remedy faults on the valve observe the relevant information given in this operating manual or the product literature provided by the accessories manufacturers.</p>

If problems occur that are not described in the following table, consultation with the KSB customer service is required.

Table 104: Trouble-shooting

Problem	Possible cause	Remedy
Leakage at the seat	<ul style="list-style-type: none"> ▪ Contaminations or solids in the fluid ▪ Erosion, corrosion or abrasion ▪ Excessive loads from pipeline forces or thermal stresses 	<ol style="list-style-type: none"> 1. Dismantle the bonnet/cover bolting (902.1/920.1). 2. Rework the seating faces of valve disc and body using a suitable re-seating tool. 3. Continue re-seating until the seating faces exhibit a consistently smooth and even ring.
Leakage at the gland packing	Unevenly tightened gland packing	<ol style="list-style-type: none"> 1. Re-tighten the hexagon nuts (920/920.2) as specified in the manual.
	Defective gland packing	<ol style="list-style-type: none"> 1. Undo hexagon nuts (920/920.2). 2. Lift the gland follower (452). 3. Clean the gland packing chamber. 4. Insert split packing rings in such a manner that the cut ends of the rings are offset by between 120° and 180°.
Leakage at bonnet/body joint or cover/body joint (bolted bonnet/cover design)	Unevenly tightened bonnet/cover bolts	<ol style="list-style-type: none"> 1. Re-tighten the bonnet/cover bolting (902.1/920.1) as specified in the manual.
	Defective bonnet/cover gasket	<ol style="list-style-type: none"> 1. Dismantle the bonnet/cover bolting (902.1/920.1). 2. Clean sealing surfaces. 3. Replace the joint ring (411). <p>The tightening torques must be observed.</p>
Leakage at the bonnet/body joint or cover/body joint (for pressure seal design)	Unevenly tightened hexagon head bolts.	<ol style="list-style-type: none"> 1. Re-tighten the hexagon head bolts (901.1/920.1) as specified in the manual.
	Defective joint ring	<ol style="list-style-type: none"> 1. Remove pressure seal bonnet/cover. 2. Clean sealing surfaces. 3. Replace the joint ring (411.1). <p>The tightening torques must be observed.</p>

9 EU Declaration of Conformity

9.1 EU Declaration of Conformity for ECOLINE FYF 800, GLF 2500, GLB 800, GTF 2500, GTB 800, PTF 2500, SCF 2500

Hereby we,

KSB Valves (Changzhou) Co., Ltd.
No. 68 Huanbao Four Road,
Environment Protection Industrial Park,
Xinbei District, Changzhou City, Jiangsu Province
P. R. China

declare that the product:

Gate valves

ECOLINE GTF 2500	Class 2500	NPS ½" - 2"
ECOLINE GTB 800	Class 150 - 800	NPS ½" - 2"

Globe valves

ECOLINE GLF 2500	Class 2500	NPS ½" - 2"
ECOLINE GLB 800	Class 150 - 800	NPS ½" - 2"

Swing check valves

ECOLINE SCF 2500	Class 2500	NPS ½" - 2"
------------------	------------	-------------

Lift check valves

ECOLINE PTF 2500	Class 2500	NPS ½" - 2"
------------------	------------	-------------

Strainers

ECOLINE FYF 800	Class 800	NPS ½" - 2"
-----------------	-----------	-------------

satisfies the safety requirements laid down in the Pressure Equipment Directive 2014/68/EU.

Applicable standards:

Gate valves, globe valves, non-return valves: API 602, ASME B16.34

Testing of valves: API 598

Material: ASTM

Suitable for:

Fluids in Groups 1 and 2

Conformity assessment procedure:

Module H

Name and address of the notified body responsible for approval and surveillance:

DET NORSKE VERITAS
Viale Colleoni, 9, Centro Direzionale Colleoni - Palazzo Sirio 2,
20864 Agrate Brianza MB (Italy)

Identification number of the notified body:

0496

Valves of nominal size \leq 1 inch fall under Article 4, Section 3, of the Pressure Equipment Directive 2014/68/EU. They must bear neither the CE marking nor the identification number of a notified body.

The EU Declaration of Conformity was issued in/on:

Changzhou, 7 September 2016

Jason Ji
Head of Quality Management

9.2 EU Declaration of Conformity for ECOLINE GTC, GLC, SCC, GLF, GTF, SCF, PTF

Hereby we,

KSB Valves (Changzhou) Co., Ltd.
No. 68 Huanbao Four Road,
Environment Protection Industrial Park,
Xinbei District, Changzhou City, Jiangsu Province
P. R. China

declare that **the product:**

Gate valves

ECOLINE GTC 150-600 Class 150 - 600 NPS 2" - 36"

Globe valves

ECOLINE GLC 150-600 Class 150 - 600 NPS 2" - 12"

Swing check valves

ECOLINE SCC 150-600 Class 150 - 600 NPS 2" - 24"

satisfies the safety requirements laid down in the Pressure Equipment Directive 2014/68/EU.

Applicable standards:

Gate valve: API 600

Globe valve: BS 1873

Non-return valve: BS 1868

Testing of valves: API 598

Material: ASTM

Suitable for:

Fluids in Groups 1 and 2

Conformity assessment procedure:

Module H

Name and address of the notified body responsible for approval and surveillance:

TÜV SÜD Industrie Service GmbH
Westendstraße 199
80686 München (Germany)

Identification number of the notified body:

0036

This Declaration of Conformity also confirms the conformity of the casting suppliers for ECOLINE with the requirements of Pressure Equipment Directive 2014/68/EU (PED) and "AD 2000-Merkblatt W 0" regarding the materials used for the pressure-retaining parts.

Materials inspected:

Standard	Grade
EN 10213-2007	1.0619
EN 10213-2007	1.4408
EN 10213-2007	1.4308

The EU Declaration of Conformity was issued in/on:

Changzhou, 7 September 2016

Jason Ji
Head of Quality Management

9.3 EU Declaration of Conformity for ECOLINE FYC

Hereby we,

KSB Valves (Changzhou) Co., Ltd.
No. 68 Huanbao Four Road,
Environment Protection Industrial Park,
Xinbei District, Changzhou City, Jiangsu Province
P. R. China

declare that **the product:**

Strainers

ECOLINE FYC 150-600 Class 150 - 600 NPS 2" - 12"

satisfies the safety requirements laid down in the Pressure Equipment Directive 2014/68/EU.

Applicable standards:

Strainers: ASME B16.34

Testing of valves: API 598

Material: ASTM

Suitable for:

Fluids in Groups 1 and 2

Conformity assessment procedure:

Module H

Name and address of the notified body responsible for approval and surveillance:

TÜV Rheinland Industrie Service GmbH

Am Grauen Stein

51105 Köln (Germany)

Identification number of the notified body:

0035

This Declaration of Conformity also confirms the conformity of the casting suppliers for ECOLINE with the requirements of Pressure Equipment Directive 2014/68/EU (PED) and "AD 2000-Merkblatt W 0" regarding the materials used for the pressure-retaining parts.

9.4 EU Declaration of Conformity for ECOLINE GLV, GTV, SCV

Hereby we,

KSB Valves (Changzhou) Co., Ltd.
No. 68 Huanbao Four Road,
Environment Protection Industrial Park,
Xinbei District, Changzhou City, Jiangsu Province
P. R. China

declare that **the product:**

Gate valves

ECOLINE GTV 150-300 Class 150 - 300 NPS ½" - 12"

Globe valves

ECOLINE GLV 150-300 Class 150 - 300 NPS ½" - 12"

Swing check valves

ECOLINE SCV 150-300 Class 150 - 300 NPS ½" - 12"

satisfies the safety requirements laid down in the Pressure Equipment Directive 2014/68/EU.

Applicable standards:

Gate valve: API 603

Globe valve: ASME B16.34

Non-return valve: ASME B16.34

Testing of valves: API 598

Material: ASTM

Suitable for:

Fluids in Groups 1 and 2

Conformity assessment procedure:

Module H
