## Building Services: Heating

### Drinking Water Circulators, Fixed Speed Version

## CalioTherm Pro

Also applies to Calio-Therm

### Main applications

- Drinking water circulation systems to DVGW-W551

### Fluids handled

- Drinking water and water for the food and beverage industry, as per German TrinkwV 2001 drinking water regulations

### Operating data

Table 1: Operating properties

Characteristic	Value	
Flow rate	Q [m³/h]	≤ 24
	Q [l/s]	≤ 6,7
Head	H [m]	≤ 12
Fluid temperature <sup>1)</sup>	T [°C]	≥ +2 ≤ +70 <sup>2)</sup>
	[°dH]	≤ 20
Hardness of fluid handled	[°fH]	≤ 35,7
	[°dH]	≤ 20
Ambient temperature	T [°C]	≥ 0 ≤ +40
	[°fH]	≤ 35,7
Operating pressure	p [bar]	≤ 10
Pressure class	PN [bar]	6/10
Average sound pressure level	[dB (A)]	≤ 40
Screw-ended connection	G	1 1/2 - 2
Flanged connection	DN	40

### Design details

#### Design

- Maintenance-free high-efficiency wet rotor pump (glandless)

#### Drive

- High-efficiency permanent magnet synchronous motor, brushless, self-cooling, with continuously variable differential pressure control
- Integrated motor protection
- 1~230 V AC +/- 10%
- Frequency 50 Hz/60 Hz
- Enclosure IPX4D
- Thermal class F
- Temperature class TF 110
- Interference emissions EN 55014-1, EN 61000-3-2, EN 61000-3-3
- Interference immunity EN 55014-2

#### Bearings

- Product-lubricated special plain bearing

#### Connections

- Screw-ended or flanged

#### Operating modes

- Constant-pressure control
- Proportional-pressure control
- Temperature-governed differential pressure control (can only be activated with KSB ServiceTool)
- Open-loop control via setpoint setting
- Eco Mode

#### Automatic functions

- Continuously variable speed adjustment depending on the mode of operation
- 0 - 10 V with external differential pressure/speed setpoint
- 0 - 10 V as input of the actual value of the temperature or actual value of the differential pressure
- Dual-pump operation
- Peak load operation
- Setback operation
- Dynamic Control
- Remote ON/OFF
- Deblocking function
- Self-venting function
- Soft start
- Full motor protection with integrated trip electronics

<sup>1</sup> We recommend fluid temperatures no higher than 65 °C to prevent possible consequences caused by lime sedimentation.  
Higher fluid temperatures are permissible for short periods (e.g. for thermal disinfection cycles).

<sup>2</sup> ≤ +75 °C for short-time operation ≤ 5 minutes

### **Manual functions**

- Setting the operating mode
- Setting the discharge head setpoint
- Setting the speed level
- Locking the control panel

### **Signalling functions and display functions**

- Periodically alternating display of flow rate, head and electrical input power
- Operating status shown on the display
- Error codes indicated on the display
- Configurable general fault message and "in operation" message (volt-free changeover contacts)
- Serial digital Modbus RTU interface
- Service interface for KSB ServiceTool

### **Designation**

**Example: CalioTherm Pro 25-80**

**Table 2: Designation key**

Code	Description
CalioTherm Pro	Type series
25	Nominal diameter of pump nozzle
25	G 1 1/2
30	G 2
40	DN 40
80	Head H <sup>3)</sup> [m]
80	Head × 10 Example: 8 m × 10 = 80

**Example: Calio-Therm 25-80**

**Table 3: Designation key**

Code	Description
Calio-Therm	Type series
25	Nominal diameter of pump nozzle
25	G 1 1/2
30	G 2
40	DN 40
80	Head H <sup>4)</sup> [m]
80	Head × 10 Example: 8 m × 10 = 80

### **Materials**

**Table 4: Overview of available materials**

Part No.	Description	Material
102	Volute casing	Stainless steel 1.4308
210	Shaft	Stainless steel 1.4034
230	Impeller	Plastic with glass fibre content (PSU-GF30)
310	Bearing	Ceramics/carbon
689	Thermal insulation shells	Polypropylene
817	Can	Plastic with glass fibre content (PPS-GF40)

Casing parts which are in contact with the atmosphere and with the fluid handled are free from paint-wetting impairment materials.

All wetted components are DVGW-approved for use in drinking water circulation systems.

<sup>3</sup> At flow rate Q = 0 m<sup>3</sup>/h

<sup>4</sup> At flow rate Q = 0 m<sup>3</sup>/h

## **Product benefits**

- High-efficiency technology combined with speed control and efficient operation by means of **Dynamic Control** offer maximum savings.
- All-in concept saves investment costs and commissioning costs.
- Easy-to-use combination of controls, integrated display and symbols to show the operating status

## **Product information**

### **Product information as per Regulation No. 1907/2006 (REACH)**

For information as per European chemicals regulation (EC) No. 1907/2006 (REACH) see <https://www.ksb.com/en-global/company/corporate-responsibility/reach>.

## Selection information

### Minimum inlet pressure

The minimum inlet pressure  $p_{\min}$  at the pump suction nozzle serves to avoid cavitation noises at the indicated fluid temperature  $T_{\max}$ .

The indicated values are applicable up to 300 m above sea level. For installation at altitudes > 300 m, an allowance of 0.01 bar / 100 m must be added.

**Table 5:** Minimum inlet pressure  $p_{\min}$  specified for the fluid temperature  $T_{\max}$ .

Fluid temperature [°C]	Minimum inlet pressure [bar]
≤ +70 <sup>5)</sup>	0,5

### Permissible fluid temperature

**Table 6:** Temperature limits of the fluid handled

Permissible fluid temperature	Value [°C]
Maximum	+70 <sup>6)</sup>
Minimum	+2

### Permissible ambient temperature

**Table 7:** Permissible ambient temperatures specified for the fluid temperature

Fluid temperature [°C]	Permissible ambient temperature [°C]
≤ +70 <sup>7)</sup>	+40

### Description of the Modbus interface

**Table 8:** Technical data of the Modbus interface

Parameter	Description/value
Terminal cross-section	1,5 mm <sup>2</sup>
Interface	RS485 (TIA-485-A) optically isolated
Bus connection	0.5 mm <sup>2</sup> , shielded twisted pair bus cable
Cable length	<ul style="list-style-type: none"> <li>▪ 1000 m max.</li> <li>▪ Stub line impermissible</li> <li>▪ For cable lengths &gt; 30 m take suitable measures to ensure overvoltage protection.</li> </ul>
Wave impedance	120 Ω (cable type B to TIA-485-A)
Data rates [baud]	4800, 9600, 38,400, 57,600, 115,200 (19,200 = factory setting)
Protocol	Modbus RTU standard
Data format	<ul style="list-style-type: none"> <li>▪ 8 data bits</li> <li>▪ Parity EVEN / ODD / NONE</li> <li>▪ 1 stop bit</li> </ul>
Modbus address	ID #1 to #247 selectable (ID #17 = factory setting)

Further description see operating manual of the pump set.

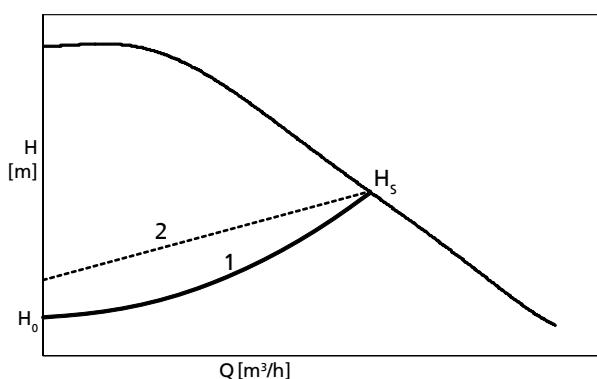

<sup>5</sup> ≤ +75 °C for short-time duty ≤ 5 minutes

<sup>6</sup> ≤ +75 °C for short-time duty ≤ 5 minutes

<sup>7</sup> ≤ +75 °C for short-time duty ≤ 5 minutes

### Description of the Eco Mode

In Eco Mode, the pump characteristic curve (1) is quadratic. Starting at the discharge head setpoint  $H_s$ , the characteristic curve intersects the discharge head axis at  $H_0 = 1/4 \times H_s$ . By changing the differential pressure setpoint this pump characteristic curve can be adjusted to higher or lower differential pressures or discharge heads. Compared with the Proportional-pressure Control operating mode the Eco Mode can save more than 40 % in electrical input power. An example of a characteristic curve of a pump in Eco Mode is shown below.

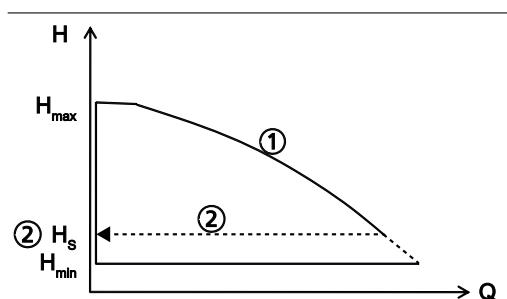

**Fig. 1:** Eco Mode function

1	Eco Mode characteristic curve	3	Control curve
2	Proportional-pressure Control characteristic curve for comparison	4	Minimum characteristic curve

### Description of Constant-pressure Control operating mode

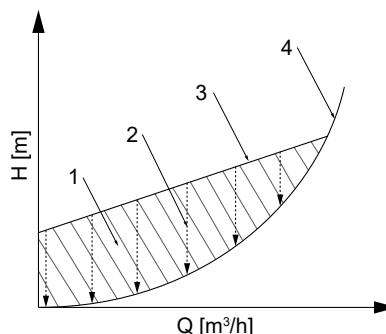

In Constant-pressure Control the set head ② is maintained irrespective of the flow rate. The set differential pressure setpoint  $H_s$  is constant, situated between the maximum curve ① and the permissible flow rate range.

**Fig. 2:** Constant-pressure Control function

### Dynamic Control description

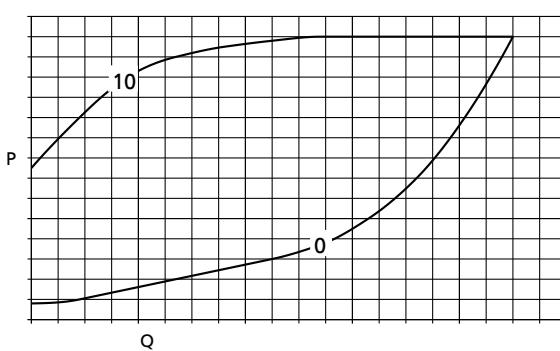

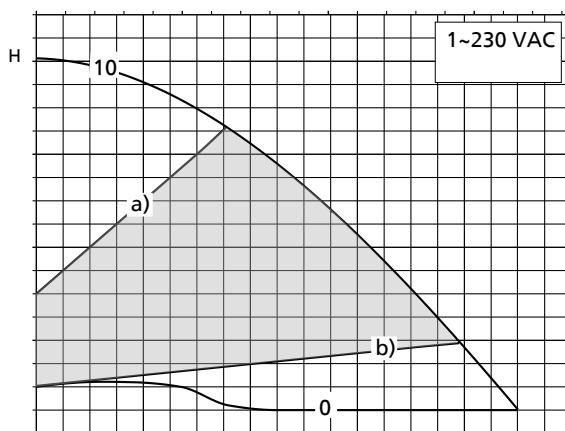

The dynamic control (2) system detects when the selected control curve (3) is higher than the minimum characteristic curve<sup>8)</sup> (4). The control system shifts the control curve downward, and power input is reduced automatically. To ensure sufficient supply the pump set switches to a higher control curve when the minimum characteristic curve is reached. The energy input is reduced (1) without any negative impact on the supply of the building. The pump set is operated in an optimised way, even if the system characteristic curve is unknown; the noise at the thermostatic valves is reduced.

**Fig. 3:** Principle of dynamic control

1	Excess energy input	3	Control curve
2	Dynamic control	4	Minimum characteristic curve

### Description of the characteristic curve

**Fig. 4:** Selection example

The pump characteristic curve can be adjusted between a) and b) in increments of 1 % by turning the control element.

0	Level 0 = open-loop control, minimum speed (corresponds to a setting of 0 %)
10	Level 10 = open-loop control, maximum speed (corresponds to a setting of 100 %)
	Control range
a)	Control curve, maximum head
b)	Control curve, minimum head

<sup>8</sup> Characteristic curve at fully open thermostatic valves

## Technical data

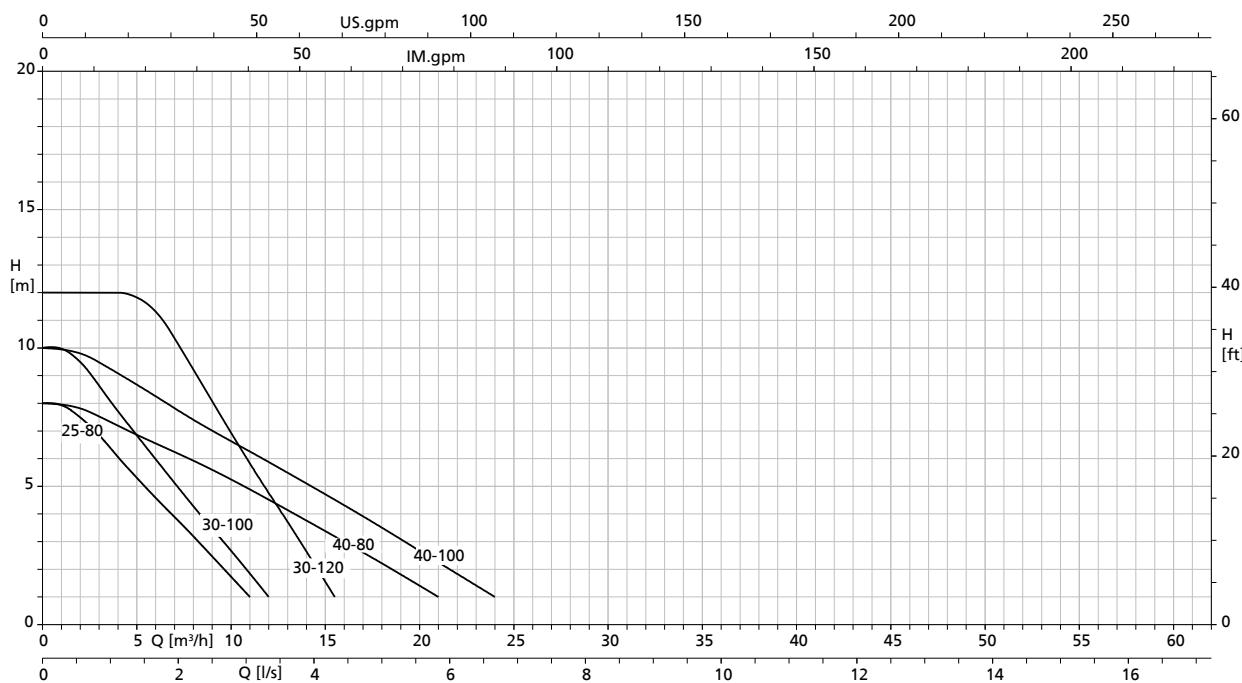

### CalioTherm Pro

**Table 9:** Technical data

Size	Connection		PN [bar]	n		P <sub>1</sub> [W]	I <sub>N</sub> 1~230 V AC, 50 Hz / 60 Hz	Mat. No.	[kg]
	Piping	Pump		Min. [rpm]	Max. [rpm]				
							[A]		
25-80	R 1	G 1 1/2	6/10	1000	4000	3,5 - 180	0,15 - 0,86	29134853	4,6
