Heating / Air-conditioning / Ventilation

In-line Pumps

Etaline L

Main applications

- Service water supply systems
- Heating systems
- Industrial recirculation systems
- Air-conditioning systems
- Cooling circuits
- Swimming pools
- Water supply systems¹⁾

Fluids handled

- Fluids not chemically or mechanically aggressive to the materials

Further information on fluids handled

Overview of fluids handled (⇒ Page 9)

PumpDrive 2 / PumpDrive 2 Eco	

Operating data

Operating properties

Characteristic	Value	
Flow rate	Q [m³/h]	≤ 95
	Q [l/s]	≤ 26,3
Head	H [m]	≤ 21
	T [°C]	≥ -15 ≤ +120
Operating pressure	p [bar]	≤ 10

Design details

Design

- Close-coupled design / in-line design
- Single-stage
- Horizontal installation / vertical installation
- Rigid connection between pump and motor
- Fixed speed version (without PumpDrive) / variable speed version (with PumpDrive)

Pump casing

- Radially split volute casing
- In-line design

Drive (fixed speed version)

- Surface-cooled squirrel-cage motor to KSB standard
- Efficiency class IE3 to IEC 60034-30 (≥ 0.75 kW)
- Rated voltage (50 Hz) 1~ 220 - 240 V / 3~ 220 - 240 V
3~ 380 - 420 V ≤ 1.1 kW
- Rated voltage (50 Hz) 3~ 220 - 240 V / 3~ 380 - 420 V
≥ 1.8 kW
- Type of construction IM B14
- Enclosure IP55
- Duty cycle: continuous duty S1
- Thermal class F

Drive (variable speed version)

- Surface-cooled squirrel-cage motor to KSB standard prepared for mounting a PumpDrive 2 Eco
- Efficiency class IE2 to IEC 60034-30 (≥ 0.75 kW)
- Rated voltage (50 Hz) 3~ 220 - 240 V / 3~ 380 - 420 V
- Type of construction IM B14
- Enclosure IP55
- Duty cycle: continuous duty S1
- Thermal class F

PumpDrive 2 Eco:

- Self-cooling frequency inverter of modular design for the continuously variable speed control of asynchronous reluctance motors and synchronous reluctance motors by means of analog standard signals or the control panel
- Mains voltage 3~ 380 V AC -10 % to 480 V AC +10 %
- Mains voltage 1~ 220 V AC -10 % to 240 V AC +10 %
- Mains frequency 50 Hz to 60 Hz ± 2 %

1) No drinking water in acc. with UBA (German drinking water regulations to German Environment Agency)

Shaft seal

- KSB mechanical seal

Impeller type

- Closed radial impeller

Bearings

- Radial ball bearings in the motor housing
- Grease lubrication

4) Optional design with additional code P

Coating and preservation

- Coating and preservation to manufacturer's standard

Product benefits

- Improved efficiency and NPSH_{req} by experimentally verified hydraulic design of impellers (vanes)
- Little wear, low vibration levels and excellent smooth running characteristics thanks to good suction performance and virtually cavitation-free operation across a wide operating range
- Casing sealed reliably – even in varying operating conditions – by confined casing gasket
- Optimum match of pump to fluid handled by a large choice of materials for many applications as standard
- Low-noise low-vibration motors specially designed for Etaline L. Also available as 2-pole motors.
- PumpDrive perfectly matched to pump and motor by default factory parameter settings
- Space-saving owing to motor-mounted variable speed system

Product information**Product information as per Regulation No. 1907/2006 (REACH)**

For information as per chemicals Regulation (EC) No 1907/2006 (REACH), see <http://www.ksb.com/reach>.

Product information as per Regulation No. 547/2012 (for water pumps with a maximum shaft power of 150 kW) implementing "Ecodesign" Directive 2009/125/EC

- Minimum efficiency index: see data sheet
- The benchmark for the most efficient water pumps is MEI ≥ 0.70 .
- Year of construction: see data sheet
- Manufacturer's name or trade mark, commercial registration number and place of manufacture: see data sheet or order documentation
- Product's type and size identifier: see data sheet
- Hydraulic pump efficiency (%) with trimmed impeller: see data sheet
- Pump performance curves, including efficiency characteristics: see documented characteristic curve
- The efficiency of a pump with a trimmed impeller is usually lower than that of a pump with full impeller diameter. Trimming of the impeller will adapt the pump to a fixed duty point, leading to reduced energy consumption. The minimum efficiency index (MEI) is based on the full impeller diameter.
- Operation of this water pump with variable duty points may be more efficient and economic when controlled, for example, by the use of a variable speed drive that matches the pump duty to the system.
- Information relevant for disassembly, recycling or disposal at end of life: see installation/operating manual
- Information on benchmark efficiency or benchmark efficiency graph for MEI = 0.70 (0.40) for the pump based on the model shown in the Figure are available at: <http://www.europump.org/efficiencycharts>

Acceptance tests and warranty**Materials inspection and testing**

- Test report 2.2 on request

Hydraulic test

- The duty point of each pump with a delivery address or final destination in Europe is guaranteed to ISO 9906/3B.

 Other inspections/tests on request

Warranty

- Warranties are given within the scope of the valid terms and conditions of sale and delivery.

Overview of product features / selection tables

Overview of fluids handled

KSB EasySelect, selection software for all applications

KSB EasySelect is a comprehensive selection tool for all applications. It guides users to an optimal solution for their projects by offering a fast, easy and user-friendly way to select and configure pumps and valves. All that is required are some project-specific criteria and a few minutes' time. The tool systematically guides the user through KSB's wide range of products to the right product for the application at hand.

Other fluids upon request.

Overview of functions

Overview of PumpDrive 2 Eco functions

Functions / firmware	PumpDrive 2 Eco
Protective functions	
Thermal motor protection	x
Mains voltage monitoring	x
Phase failure, motor side	x
Short-circuit monitoring, motor side (phase to phase and phase to earth)	x
Dynamic overload protection by speed limitation (I^2t control)	x
Resonant frequency suppression	x
Broken wire detection (live zero)	x
Dry running protection (external control signal)	x
Operating point estimation and characteristic curve control	x
Open-loop control	
Open-loop control mode	x
Closed-loop control	
Closed-loop control mode via integrated PID controller	x
Pressure control / differential pressure control (Δp const)	x
Pressure control / differential pressure control with dynamic pressure compensation (Δp var)	x
Flow rate control	x
Sensorless differential pressure control (Δp const) in a single-pump configuration	x
Sensorless differential pressure control with dynamic pressure compensation (Δp var) in a single-pump configuration	x
Sensorless flow rate control	x
Level control	x
Temperature control	x
Operation and monitoring (display)	
Measured value display (pressure, head, speed, electric power, motor voltage, motor current, torque)	x
Fault history	x
Operating hours counter	x
Fault reporting via relay	x
Frequency inverter functions	
Programmable start ramps and stop ramps	x
Field-oriented control (vector control), V/f control	x
Configurable motor control method (asynchronous motor, KSB SuPremE)	x
Automatic motor adaptation (AMA)	x
Motor standstill heater	x
Manual-0-automatic mode	x
External OFF	x
External minimum speed	x
Sleep mode (stand-by mode)	x
Pump functions	
Flow rate estimation	x
M12 module with PumpMeter bus connection	x
M12 module for dual-pump configuration	x
Functional check run	x
Integrated dual-pump configuration (1x100 % with redundant pump or 2x50 % without redundant pump)	x
Operation	
Control panel	x ⁸⁾
Service interface	x

8) Some functions can only be parameterised and/or displayed using the KSB ServiceTool (see operating manual).

9) Fluid temperature; for hot water heating systems to DIN 4752, Section 4.5, application limits must be observed.

10) The casing components are checked for leakage by means of internal pressure tests to AN 1897/75-03D00 with water.

Pressure limits and temperature limits

Selection charts
Etaline L (fixed speed version), n = 2900 rpm

Etaline L (fixed speed version), n = 1450 rpm

Characteristic curves
General
Test class

Characteristic curves to ISO 9906 Class 3B

NPSH values

The NPSH values indicated in the characteristic curves correspond to a head drop of 3 %.

NPSH values in part-load conditions

NPSH values for flow rates below $Q = 0.3 \times Q_{BEP}$ can only be measured with intense technical efforts. Evidence of NPSH values in the part-load range cannot be provided.

Density of the fluid handled

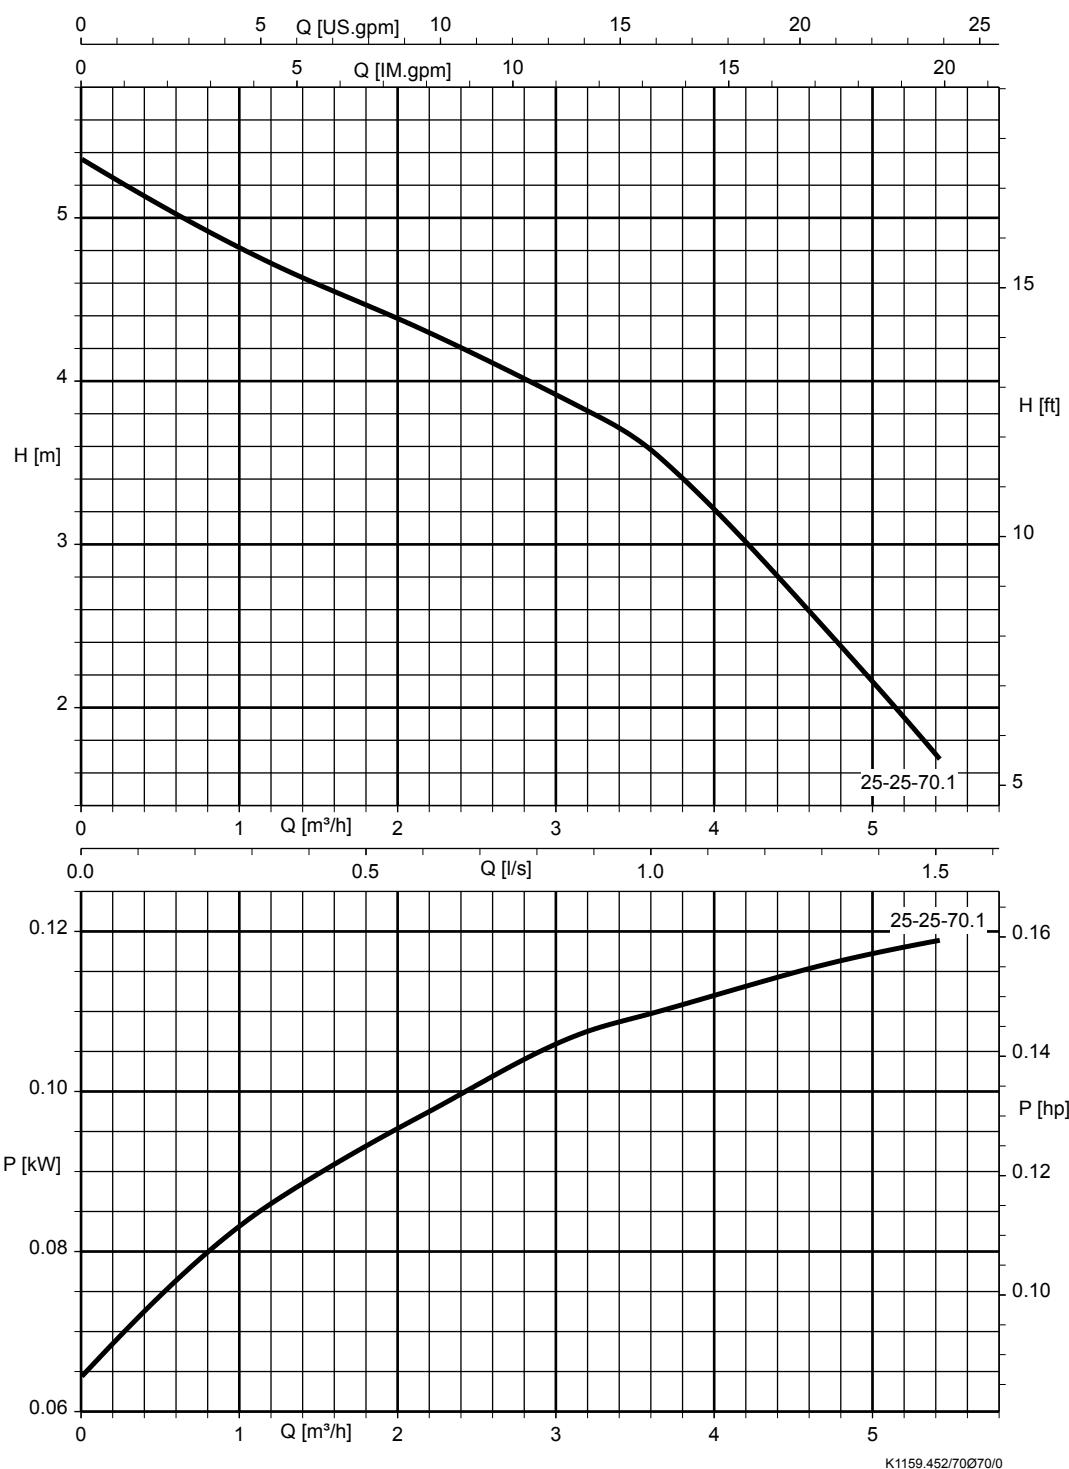

The indicated heads and performance data apply to pumped fluids with a density $\rho = 1.0 \text{ kg/dm}^3$ and a kinematic viscosity of up to $20 \text{ mm}^2/\text{s}$ max. If the density $\neq 1.0$, the performance data must be multiplied by ρ . For a viscosity $> 20 \text{ mm}^2/\text{s}$ the corresponding data for cold water has to be calculated and the impact on the pump's performance has to be determined.

Correction factors

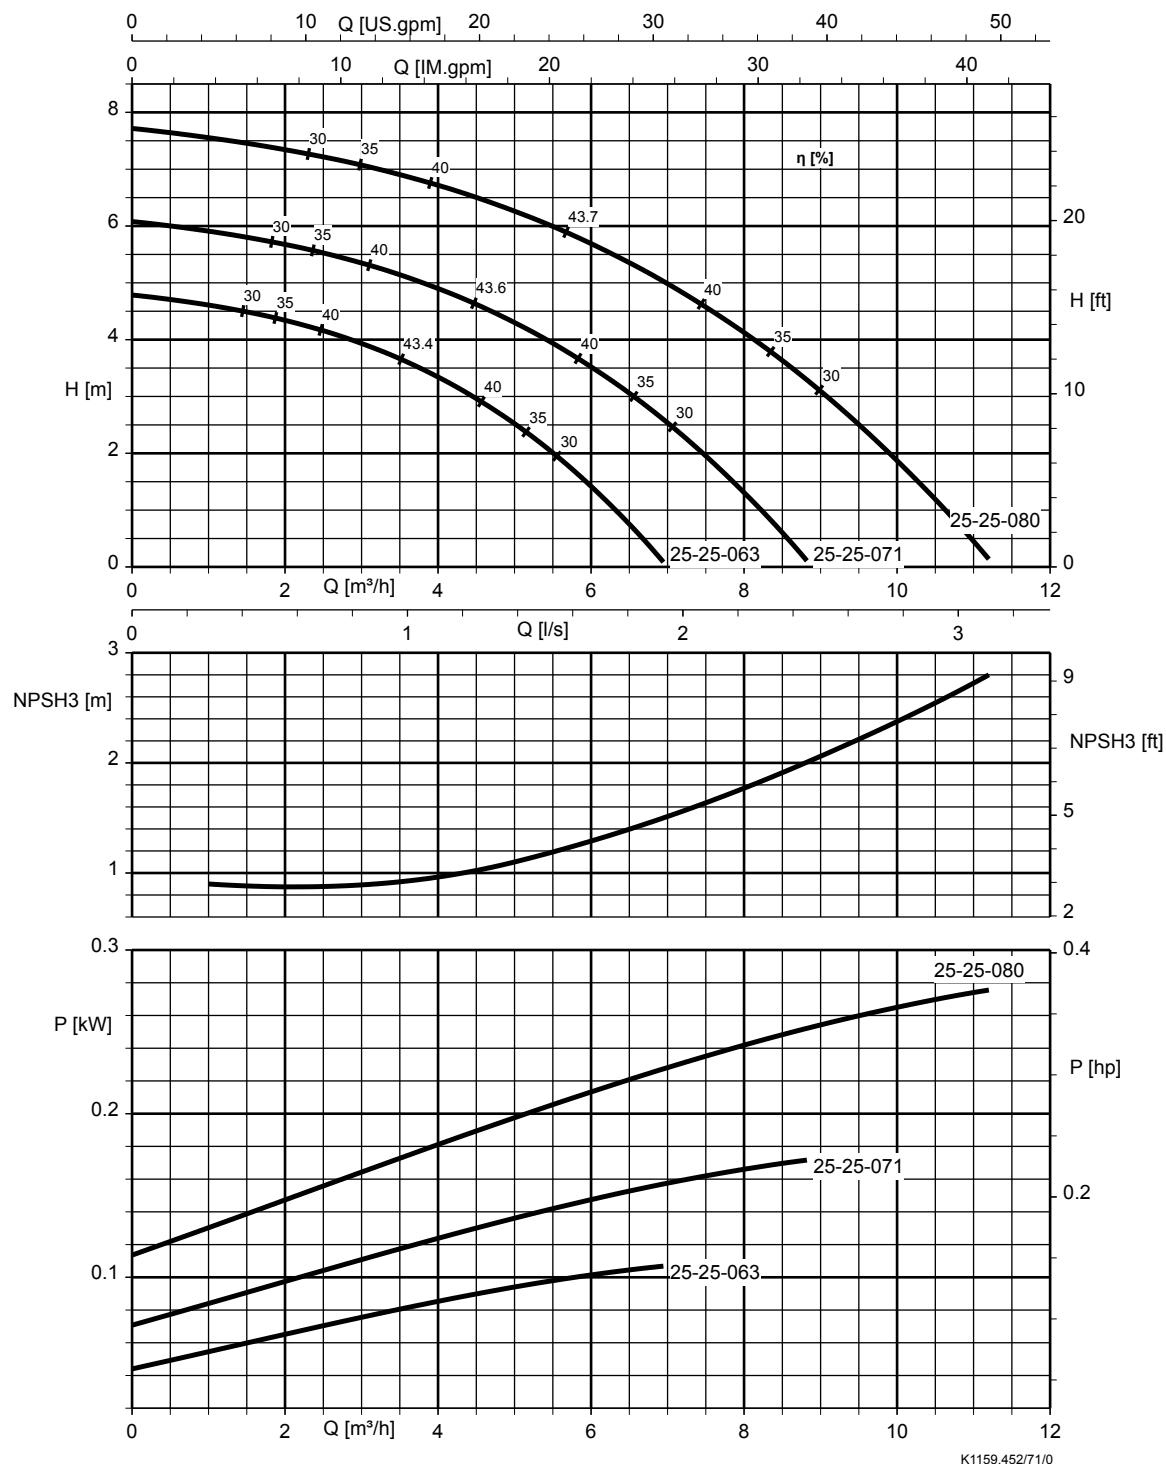

The characteristic curves apply to pumps with cast iron impellers, plastic impellers and bronze impellers.

Installation types

Horizontal installation

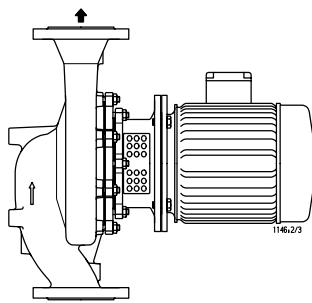

Fig. 7: Horizontal installation, direction of flow from bottom to top

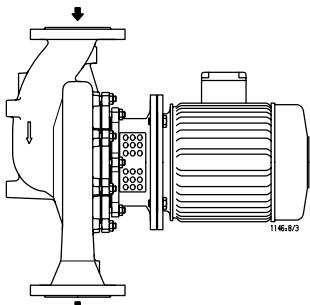

Fig. 8: Horizontal installation, direction of flow from top to bottom

i The volute casing and/or back pull-out unit must be turned by 180° so that the terminal box remains in its current position on top.

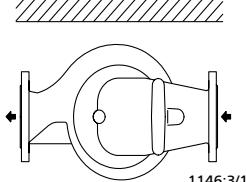

Fig. 9: Horizontal installation (for example under the ceiling)

i The volute casing and/or back pull-out unit must be turned by 90° so that the terminal box remains in its current position on top.

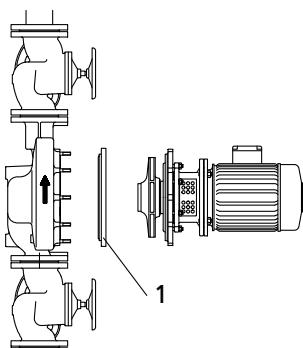

Fig. 10: Horizontal installation with blind flange (1 = blind flange, accessories)

i If one of the pumps needs to be serviced, the pump chamber can be shut off by a blind flange so that the system remains operational.

Vertical installation

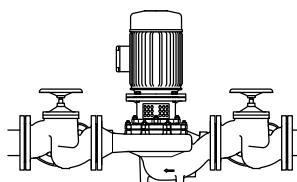

Fig. 11: Vertical installation/fastening without pump foot

i Installed directly in the piping. Always anchor the pipelines in close proximity to the pump in this case.

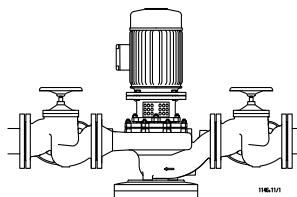

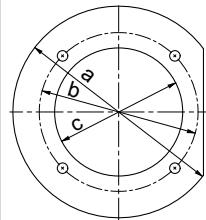

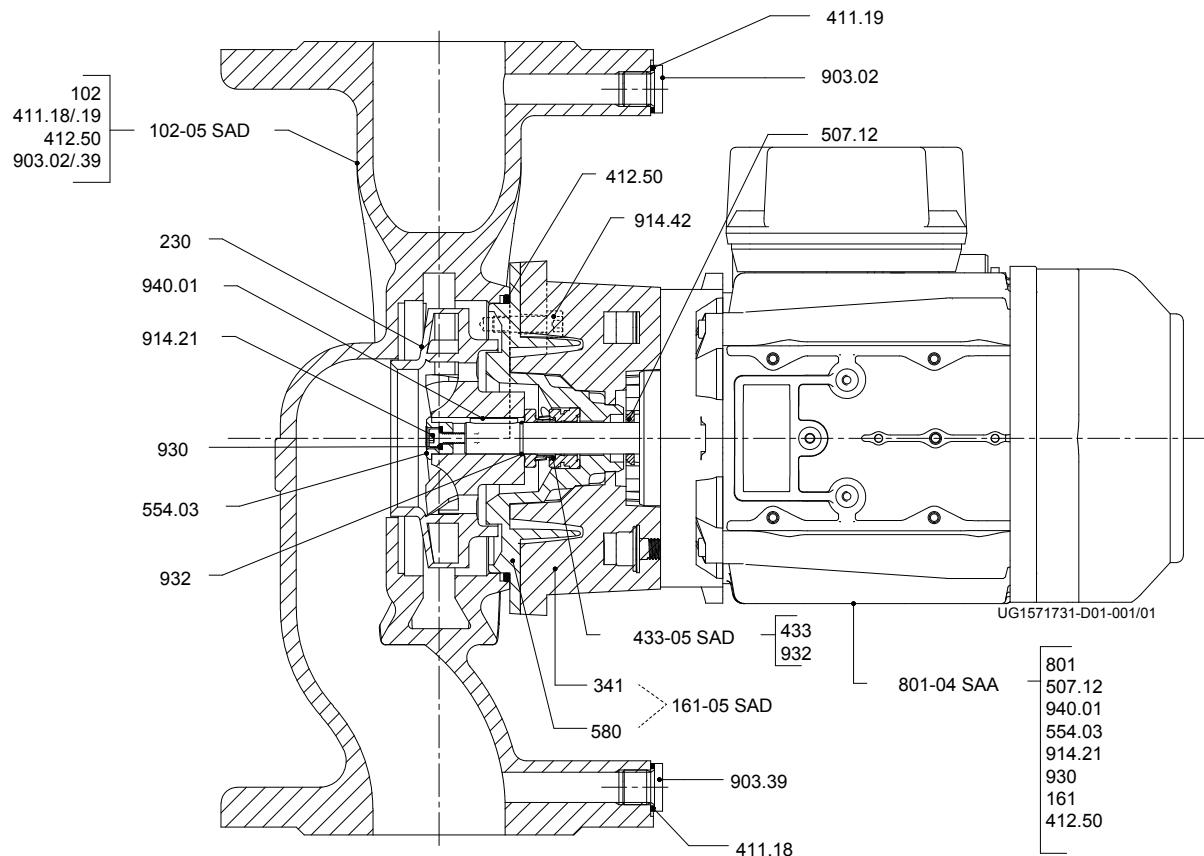

Fig. 12: Vertical installation/fastening with pump foot (accessories, available on request)

Glossary

Close-coupled design

Motor directly fitted to the pump via a flange or a drive lantern

IE2

Efficiency class to IEC 60034-30: 2 = High Efficiency (IE = International Efficiency)

IE3

Efficiency class to IEC 60034-30: 3 = Premium Efficiency (IE = International Efficiency)

In-line design

A pump whose suction and discharge nozzle are arranged opposite each other and have the same nominal diameter.

WRAS

Approved by all water suppliers in the UK (WRAS = Water Regulations Advisory Scheme)
