## Building Services: Water Supply

### Pressure Booster Systems

#### Hyamat SVP ECO

#### Main applications

- Pressure boosting

#### Fluids handled

- Clean fluids not chemically or mechanically aggressive to the pump materials
- Drinking water
- Service water
- Cooling water

#### Operating data

##### Operating properties

Characteristic		Value
Flow rate	Q [m³/h]	≤ 660 with max. 6 pumps <sup>1)</sup>
	Q [l/s]	≤ 183 with max. 6 pumps <sup>1)</sup>
Head	H [m]	≤ 160
Fluid temperature	T [°C]	≥ 0
		≤ +70
		≤ +25 to DIN 1988 (DVGW) <sup>2)</sup>
Operating pressure	p <sub>d</sub> [bar]	≤ 16
Inlet pressure	p <sub>inl</sub> [bar]	≤ 10

#### Design details

##### Design

- Fully automatic pressure booster package system
- Baseplate-mounted
- Two to six vertical high-pressure centrifugal pumps with variable speed control
- Hydraulic components made of stainless steel / brass
- 1 check valve and 1 shut-off valve per pump set to DIN / DVGW
- Discharge-side, direct-flow membrane-type accumulator, approved for drinking water
- Pressure gauge
- Pressure transmitters on the inlet side and discharge side
- Design and function as per EN 806-2, DIN 1988-500

Pressure booster system with Movitec 2B, 4B, 6B, 10B and 15B:

- Anti-vibration pads per pump

Pressure booster system with Movitec 25B, 40B, 60B and 90B:

- Level-adjustable feet and rubber pads (supplied but not fitted)

##### Installation

- Stationary dry installation

##### Drive

- High-efficiency, magnet-less KSB SuPremE motor
- Efficiency class IE4/IE5 to IEC TS 60034-30-2:2016

##### Automation

- Frequency inverter
- Control and monitoring system for the pumps integrated in the frequency inverter
- Control panel (display, keys, LEDs, service interface)
- Motor protection switch per pump
- Lockable master switch (repair switch)
- Pressure transmitters on the inlet side and discharge side
- Circuit diagram to VDE and parts list for electric parts
- Terminal strip/terminals with identification for all connections
- Terminal connection for digital dry running protection
- Remote ON/OFF input
- Field bus connection (optional)

1) With stand-by pump as peak load pump  
2) Applies to the handling of drinking water (Germany only)

## Designation

Example: Hyamat SVP Eco 4 / 0408 / 1,2 - 3,5

Designation key

Code	Description
Hyamat	Pressure booster system
SVP	All pump sets are variable speed versions.
Eco	Control system integrated in the frequency inverter
4	Number of pumps
04	Pump size
08	Number of stages
1,2	Minimum inlet pressure [bar]
3,5	Maximum usable inlet pressure [bar]

## Configuration and function

Fig. 1: Illustration of pressure booster system

1	Control cabinet	4	Manifold
2	Motor with variable speed system	5	Baseplate
3	High-pressure centrifugal pump		

## Design

The fully automatic pressure booster system is equipped with two to six vertical variable speed high-pressure centrifugal pumps (4) for pumping the fluid handled to the consumer installations in the set pressure range.

## Function

Motor-mounted frequency inverters (2) control and monitor two to six high-pressure pumps (3). Each pump set is operated on a motor-mounted variable speed system (frequency inverter) and controlled so as to ensure a constant discharge pressure of the pressure booster system. As the demand increases or decreases, peak load pumps are started and stopped automatically.

As soon as the demand increases again after one pump set has been stopped, another pump set which has not been in operation before is started up. When the last pump set has been stopped and the demand increases again, the next pump set in line is started up. The stand-by pump is also included in the alternating cycle.

The actual pressure is measured by means of an analog pressure gauge (pressure transmitter) which is monitored by integrated broken wire detection (4-20 mA). In the standard setting, the pressure booster system starts up and stops automatically. The pump sets are started and stopped as a function of demand. Variable speed control reduces the frequency of starts of the pump sets in parallel operation. If a pump set that is in operation fails, the next pump set is started up immediately. If the demand drops towards 0, the pressure booster system slowly runs down to the stop point. A fault message can be transmitted via volt-free contacts, e.g. to a control station. The operating status is displayed via LEDs.

## Materials

Overview of available materials

Component	Material
Pump casing	Stainless steel
Shroud	Stainless steel
Hydraulic system	Stainless steel
Mechanical seal	To EN 12756
Primary ring	Silicon carbide
Mating ring	Hard carbon
Elastomer	EPDM
Baseplate	Steel, with powder or paint coating
Manifold	Stainless steel
Valves	Copper-base alloy / brass or nodular cast iron / EPDM, DVGW-approved, approved for drinking water
Accumulator	Connection made of stainless steel, flow through valve to DIN 4807-5
Membrane	Approved for drinking water

## Product benefits

- Optimised energy efficiency by high-efficiency, magnetless KSB SuPremE motor of efficiency class IE4/IE5 (to IEC TS 60034-30-2:2016) and energy-saving function
- Ready-to-connect, supplied pre-set and tested for functionality
- User-friendly, straightforward menu navigation
- Reliable operation by corrosion-resistant internal parts
- Suitable for drinking water installations as it has been manufactured under stringent hygienic conditions
- Hydraulic components made of stainless steel / brass

## Product information

### Product information as per Regulation No. 1907/2006 (REACH)

For information as per chemicals Regulation (EC) No. 1907/2006 (REACH), see <http://www.ksb.com/reach>.

## Selection information

### Lightning protection

- Electrical installations must be protected against overvoltage (compulsory since 14 December 2018) (see DIN VDE 0100-443 (IEC60364-4-44:2007/A1:2015, modified) and DIN VDE 0100-534 (IEC 60364-5-53:2001/A2:2015, modified). Whenever modifications are made to existing installations, retrofitting a surge protective device (SPD) in accordance with VDE is mandatory.
- A maximum cable length of 10 metres should not be exceeded between the surge protective device (usually type 1, internal lightning protection) installed at the service entrance and the equipment to be protected. For longer cables, additional surge protective devices (type 2) must be provided in the sub-distribution board upstream of the equipment to be protected or directly in the equipment itself.
- The associated lightning protection concept must be provided by the operator or by a suitable provider commissioned by the operator. Surge protective devices can be offered for the control units on request.

## Selecting the pressure booster system

For selecting the pressure booster system see KSB EasySelect and/or the Planning Information for Pressure Booster Systems (reference number 2300.025).

### Example

Specify the operating points:

- Flow rate required: 10 m<sup>3</sup>/h
- Head: 55 m (start-up pressure p<sub>E</sub>: 5.5 bar)
- Decide on whether to use a stand-by pump to DIN 1988.

Calculate the flow rate per pump set:

To distribute the load evenly between the pump sets used, divide the required flow rate by the number of pump sets used. The stand-by pump, if any, is not taken into account.

Calculation:

- ✓ Requirements planning results in four pump sets.
- 1. 10 m<sup>3</sup>/h : 4 duty pumps = 2.5 m<sup>3</sup>/h per pump set  
 ⇒ 4 duty pumps + 1 stand-by pump = 5 (Hyamat ... 5)

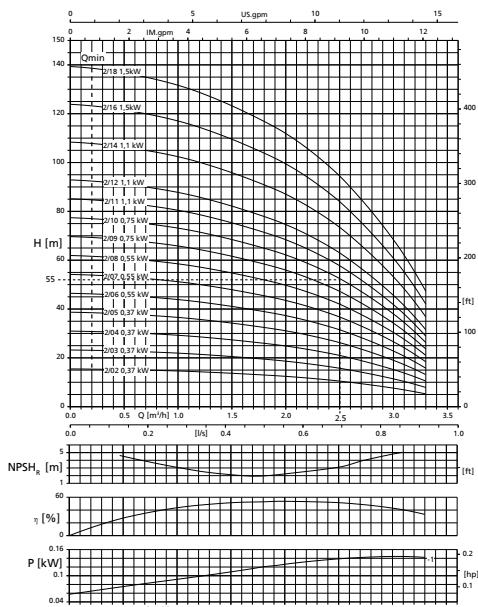

Determine the pump size and number of stages:

1. In the characteristic curve of Hyamat ... 5 link the calculated flow rate per pump set with the required head.  
 ⇒ Link 2.5 m<sup>3</sup>/h to 55 m (head) = 2/10B  
 ⇒ Pump set size = Movitec 2, number of stages 10  
 ⇒ Hyamat ... 5 / 210B

Flow rate calculation based on the number of pumps

Number of pumps	With stand-by pump	Calculation of flow rate [Q]
1	No	Required flow rate = flow rate in characteristic curve
1	Yes	Required flow rate = flow rate in characteristic curve
2	No	Required flow rate : 2 = flow rate in characteristic curve
2	Yes	Required flow rate : 2 = flow rate in characteristic curve
3	No	Required flow rate : 3 = flow rate in characteristic curve
3	Yes	Required flow rate : 3 = flow rate in characteristic curve
4	No	Required flow rate : 4 = flow rate in characteristic curve
4	Yes	Required flow rate : 4 = flow rate in characteristic curve

Number of pumps	With stand-by pump	Calculation of flow rate [Q]
5	No	Required flow rate : 5 = flow rate in characteristic curve
5	Yes	Required flow rate : 5 = flow rate in characteristic curve
6	No	Required flow rate : 6 = flow rate in characteristic curve

**Fig. 2:** Characteristic curve for determining the pressure booster system (example)

### Determining the power input

The value  $P$  [kW] determined in the characteristic curve refers to the power per stage.

- Normal stage ( $St = 1$ )
- Stage with a smaller impeller ( $St = -1$ )

### Calculation

1st example:

Movitec .../11 (11 stages)

$$P = \text{power/stage} \times 11$$

2nd example:

Movitec .../11-1 (11 stages, 1 stage with a smaller impeller)

$$P = \text{power/stage} \times (10 + -1)$$

3rd example:

Movitec .../11-2 (11 stages, 2 stages with a smaller impeller)

$$P = \text{power/stage} \times (9 + -2)$$

## Technical data

### Electrical performance data

#### Electrical performance data

## Scope of supply

Depending on the model, the following items are included in the scope of supply:

### Pressure booster system

- Two to six vertical high-pressure centrifugal pumps
- Discharge-side, direct-flow membrane-type accumulator, approved for drinking water
- 1 check valve and 1 shut-off valve per pump set to DIN / DVGW
- Pressure transmitters on the inlet side and discharge side
- Pressure gauge
- Powder-coated / epoxy resin-coated steel baseplate

For Movitec 2B, 4B, 6B, 10B and 15B:

- With oval flange/round flange
- Pumps mounted on the baseplate with anti-vibration mounts

For Movitec 25B, 40B, 60B and 90B:

- With round flange
- Pressure booster system with level-adjustable feet and rubber pads (supplied but not fitted)

### Control unit

- Frequency inverter
- Control and monitoring system for the pumps integrated in the frequency inverter
- Control panel (display, keys, LEDs, service interface)
- Motor protection switch per pump
- Lockable master switch (repair switch)
- Terminal strip/terminals with identification for all connections
- Circuit diagram and list of electric components
- Terminal connection for digital dry running protection
- Remote ON/OFF input

### Accessories

 See the separate type series booklet Accessories for Pressure Booster Systems 1954.5.
