Waste Water

Submersible Motor Pump

Amarex KRT

Main applications

- Waste water management
- Service water supply systems
- Disposal
- Waste water treatment plants
- Sludge disposal

Fluids handled

- Sewage containing feces
- Activated sludge
- Digested sludge
- Raw sludge
- Fluids containing gas
- Industrial waste water

Operating data

Table 1: Operating properties

Characteristic	Value
Flow rate	Q [US.gpm] ≤ 45000
	Q [l/s] ≤ 2800
Head	H [ft] ≤ 330
	H [m] ≤ 100
Fluid temperature	T [°F] ≤ +140
	T [°C] ≤ +60
Motor rating	P ₂ [hp] ≤ 1140
	P ₂ [kW] ≤ 850

Design details

Design

- Fully floodable submersible motor pump
- Not self-priming
- Close-coupled design

Drive

- Three-phase asynchronous squirrel-cage motor
- Motors integrated in explosion-proof pump sets are supplied in Explosionproof Class I Division 1, Groups C&D, T3.

Shaft seal

Depending on the motor design:

- Two bi-directional mechanical seals in tandem arrangement with liquid reservoir, with leakage chamber on some models
- Double cartridge seal with leakage chamber

Impeller type

- Various application-oriented impeller types (⇒ Page 14)

Bearings

- Various application-oriented bearings (⇒ Page 8)

Drive end:

- Grease-packed bearings sealed for life
- Maintenance-free

Pump end:

- Standard bearings
 - Grease-packed bearings sealed for life
 - Maintenance-free
- Reinforced bearings
 - Grease-packed bearings
 - Can be re-lubricated

	³⁾	No efficiency classification
	IE3	Premium Efficiency

2553.524/16-EN-US

¹ Maximum fluid temperature and ambient temperature

² The IEC 60034-30 standard is not binding for submersible motor pumps. Efficiencies are calculated / determined by analogy with the measurement method specified in IEC 60034-2. The marking is used for submersible motors that achieve efficiency levels similar to those of standardized motors acc. to the IEC 60034-30 standard.

Description of materials
EN-GJL-250 gray cast iron (lamellar graphite cast iron)

Lamellar graphite cast iron to EN 1561 is the most widely used cast material for handling municipal sewage, waste water and sludges as well as stormwater and surface water. It is suitable for neutral fluids which are only slightly aggressive and cause little wear. The pH value should be ≥ 6.5 , the sand content ≤ 0.5 g/l.

Nodular cast iron EN-GJS-400-15 (nodular graphite cast iron)

Its ductile structure, mechanical properties and wear resistance make this nodular cast iron to EN 1561 a suitable propeller material that is also suitable for handling digestion substrate.

Duplex stainless steel (1.4517 or technically equivalent material)

This type of cast steel is resistant to cavitation, has excellent strength values and is used for high circumferential speeds. An excellent resistance to pitting corrosion makes ferritic-austenitic stainless steel a popular choice for pumping acidic waste water with a high chloride content as well as seawater and brackish water. Thanks to its good chemical resistance, e.g. against waste water containing phosphorus and sulphuric acid, this material is used in a wide range of applications in the chemical industry and process engineering. Pumps made of duplex stainless steel have a very long service life, even when handling brines, chemical waste water (pH 1 - 12), gray water and landfill leachate.

Wear-resistant white cast iron (EN-GJN-HB555 [XCR14] or technically equivalent material)

Wear-resistant white cast iron is suitable for handling highly abrasive fluids containing sand, ash or iron ore sinter, for example. It has a Rockwell hardness (HRC) of 54 as a minimum, which is higher than that of hardened chrome steel. Owing to its hardness, the chromium-molybdenum alloy cast iron features a notably higher wear resistance than EN-GJL-250 gray cast iron and other cast materials. A pH ≥ 6.5 should be observed.

⁴ D impeller: EN-GJL-250; D-max impeller: EN-GJS-400-15

⁵ D impeller: EN-GJL-250, with hardened edges; D-max impeller: EN-GJS-400-15, with hardened edges

⁶ For E impeller and K impeller

⁷ Equivalent to 1.4571

Product benefits

- Absolutely water-tight resin-sealed cable entries prevent any water from entering the motor – even in the event of a damaged connection cable.
- Reliable operation ensured by moisture sensors signaling any ingress of moisture into the motor
- Reliable operation ensured by sensors monitoring the motor temperature and preventing overheating
- Non-clogging low-maintenance design with large free passages reduces clogging risk and, consequently, maintenance work.
- Optimum hydraulic and energy efficiency by high-efficiency motors and variable hydraulic systems

Material variants C1 and C2:

- Long service life due to corrosion-resistant wetted components made of stainless steel

Acceptance tests and warranty
Functional test

- Every pump undergoes functional testing to KSB standard ZN 56535.

K/K-max impeller:

- Operating data is guaranteed to DIN EN ISO 9906/2B. It can also be guaranteed to DIN EN ISO 9906/1B, 3B and 1U (with re-evaluation of D2 and η).

S, F/F-max, E/E-max, D/D-max impellers:

- Operating data is guaranteed to DIN EN ISO 9906/3B. It can also be guaranteed to DIN EN ISO 9906/2B.

Power input P₂ of the pump below 10 kW.

- Operating data is guaranteed to DIN EN ISO 9906 and HI §4.4.2. Other acceptance grades are not approved.

Acceptance tests

- Acceptance testing to ISO/DIN or comparable standards is available against a surcharge.

Warranty

- Quality is assured by means of an audited and certified quality assurance system to DIN EN ISO 9001.

Selection information

- The indicated heads and performance data apply to material variant G, for fluids with a density $\rho = 1 \text{ kg/dm}^3$ and a kinematic viscosity $\nu \leq 20 \text{ mm}^2/\text{s}$.

Impeller type

- S, F, E and D impellers can only be supplied with the documented impeller diameters. Indicate the pump set designation and the impeller diameter in the purchase order.
- K and D-max impellers are trimmed to the duty point. Indicate the H/Q data or the impeller diameter in the purchase order. In the hydraulic selection program, the impeller diameter is automatically computed based on the H/Q data and added to the designation of the pump set.

Pump input power

- Adjust the power input to the density of the fluid handled:

$$P_2 \text{ (required)} = \rho \text{ [kg/dm}^3\text{]} \text{ (fluid handled)} \times P_2 \text{ (documented)}$$
- Select the operating point with the largest power input within an operating range. Select a motor size providing a power reserve to compensate for the tolerances in the system characteristic / pump characteristic.

Table 5: Recommended motor power reserve⁸⁾

P ₂		Reserve	
[hp]	[kW]	Mains operation	With frequency inverter
≤ 40	≤ 30	10 %	15 %
> 40	> 30	5 %	10 %

- For installation types D and K (with cooling jacket) with motors UN/XN/YN, always add a power reserve of 2 hp [1.5 kW] for the cooling circuit.
- The motors are suitable for operation on a frequency inverter.
- The service factor for all motors equals 1.15.

i In the case of waste water, too low a flow velocity in the discharge line will lead to clogging and increased wear. The minimum flow velocity required in vertical risers was determined experimentally as a function of the pipe diameter used and shown to be between 3.9 ft/s [1.2 m/s] for nominal size 100 and 7.9 ft/s [2.4 m/s] for nominal size 1000. For more information on flow velocities required in horizontal and vertical discharge lines refer to "KSB Know-how: Planning Information for Amarex KRT Submersible Motor Pumps".

i In the case of waste water, too low a circumferential speed of the impeller will lead to clogging of the hydraulic system (operation on frequency inverter). A minimum circumferential speed (measured at the outside diameter of the impeller) of 39,4 ft/s [12 m/s] must be observed.⁹⁾

⁸ If larger power reserves are stipulated by local regulations, these larger reserves must be provided.

⁹ For F impellers, a circumferential speed below 39.4 ft/s [12 m/s] is permissible.

³¹⁾ EPR = ethylene propylene rubber

³²⁾ ETFE = ethylene tetrafluoroethylene

Impellers

	Impeller with cutter (impeller type S/S-max)	Suitable for the following fluids: Fluids containing coarse substances and/or long fibers
--	---	---

Further fluids (impeller type S/S-max):

- Domestic waste water
- Gray water
- Sewage containing feces

	Vortex impeller (impeller type F/F-max)	Suitable for the following fluids: fluids containing solids and stringy material as well as fluids with entrapped air or entrapped gas
	Closed single-channel impeller (impeller type E/E-max)	Suitable for the following fluids: fluids containing solids and stringy material
	Open, diagonal single-vane impeller (impeller type D)	Suitable for the following fluids: fluids containing solid substances and long fibers
	Open, radial multi-vane impeller (impeller type D-max)	Suitable for the following fluids: fluids containing solid substances and long fibers

Further fluids handled (impeller types F/F-max, E/E-max, D/D-max):

- Activated sludge
- Digested sludge
- Heating sludge
- Mixed water
- Raw waste water
- Raw sludge
- Recirculated sludge

	Closed multi-channel impeller (impeller type K/K-max)	Suitable for the following fluids: contaminated, solids-laden, non-gaseous fluids without stringy material
--	--	--

Further fluids (impeller type K/K-max):

- Activated sludge
- Landfill waste water
- Industrial waste water
- Industrial gray water
- Mechanically treated waste water
- Pre-screened waste water
- Stormwater

Overview of fluids handled

The table below for your guidance is based on KSB's long-standing experience. The data are standard values and are not to be considered as generally binding recommendations. More detailed advice is available from KSB. Make use of our laboratory's expertise when selecting materials.

Table 9: Selection aid for materials and hydraulic systems per fluid

Fluid handled ³³⁾	Recommended material variant	Recommended impeller type ³⁴⁾	Notes, further recommendations
Gray water	G	K/K-max, D/D-max, E/E-max, F/F-max	Free passage > any solids contained, possibly pre-screened
River water	G	K/K-max, D/D-max, E/E-max, F/F-max	Free passage > any solids contained, possibly pre-screened
Stormwater	G	K/K-max, D/D-max, E/E-max, F/F-max	Free passage > any solids contained, possibly pre-screened
Waste water:			
▪ Untreated municipal waste water	G	F/F-max, S/S-max, D/D-max, E/E-max, K/K-max	ATV ³⁵⁾ -ATV recommends a free passage of 100 mm, min. 76 mm
▪ Containing air and gas	G	F/F-max	Up to 8 %, contact KSB for fluids with high outgassing rates
Sludges:			
▪ Raw sludge	G	F/F-max, D/D-max, E/E-max	Pumpable up to a dry substance content of: 13 % (D), 8 % (F/D-max), 6 % (E)
▪ Digested sludge	G	F/F-max, D/D-max, E/E-max	Pumpable up to a dry substance content of: 13 % (D), 8 % (F/D-max), 6 % (E)
▪ Activated sludge	G	D/D-max, K/K-max	Pumpable up to a dry substance content of: 13 % (D), 8 % (D-max), 5 % (K)
Industrial waste contaminated with:			
▪ Paint suspensions	G	K/K-max	Solvent-free, observe the operator's instructions !
▪ Lacquer/paint/varnish suspensions	G	F/F-max, E/E-max	Solvent-free, contact KSB to handle silicone-free fluids
▪ Fibers/pulp	G	F/F-max, S/S-max, D/D-max	-
▪ Chips/swarf	G2 / GH	K/K-max, F/F-max	Material variants G2 or GH, special mechanical seal, solids content < 5 g/l
▪ Abrasive substances ³⁶⁾	G2 / GH	K/K-max, F/F-max	Material variants G2 or GH, special mechanical seal, solids content < 5 g/l
Mildly acidic industrial waste water	C	K/K-max, F/F-max	pH ≥ 6.5, material variant C1 and FPM (Viton) O-rings
Waste water neutral with regard to chemical corrosion:			
▪ Ammonium hydroxide	G	K/K-max	-
▪ Ammonium hydroxide 5 % NH ₄ OH	G	K/K-max	-
▪ Urea 25 % (NH ₂) ₂ -CO	G	K/K-max	-

³³⁾ For any fluids which are not listed in this table contact KSB.

³⁴⁾ The first impeller type listed should be given preference.

³⁵⁾ ATV = German regulatory body for waste water management

³⁶⁾ Severe hydroabrasive wear occurs if solids contents of approx. 0.5 g/l or higher are combined with circumferential speeds exceeding 20 m/s or part-load conditions to the left of the duty point.

Fluid handled ³³⁾	Recommended material variant	Recommended impeller type ³⁴⁾	Notes, further recommendations
▪ Potassium hydroxide 10 % KOH	G	K/K-max	-
▪ Calcium hydroxide 5 % Ca(OH) ₂	G	K/K-max	-
▪ Sodium hydroxide 5 % NaOH	G	K/K-max	-
▪ Sodium carbonate 30 % Na ₂ CO ₃	G	K/K-max	-
Neutral, non-corrosive waste water containing:			
▪ Aliphatic hydrocarbons, e.g. oils, petrol, butane, methane	G	K/K-max	-
▪ Aromatic hydrocarbons, e.g. benzene, styrene	G	K/K-max	FPM (Viton) O-rings ³⁷⁾
▪ Chlorinated hydrocarbons, e.g. tetrachloroethylene, ethylene chloride, chloroform, methylene chloride	G	K/K-max	FPM (Viton) O-rings ³⁷⁾
Highly abrasive industrial waste water causing wear (chemically neutral): ³⁸⁾			
▪ Water containing iron ore sinter	GH / H	K/K-max	Sinter content < 5 g/l: material variant GH Sinter content > 5 g/l: material variant H
▪ Lime milk containing quartz and pigment suspensions	GH / H	K/K-max	Lime milk content < 15 %: material variant GH Lime milk content > 15 %: material variant H
▪ Wash water containing solids	Wear-resistant white cast iron	K/K-max, F/F-max	Material selection based on fluid analysis
▪ Waste water containing dust or ash	GH / H	K/K-max	Material selection based on fluid analysis
Water/sand mixture	GH / H	K/K-max, F/F-max	Solids content < 5 g/l: material variant GH Solids content > 5 g/l: material variant H
Seawater	C	K/K-max, F/F-max	Material variant C2 ≤ 25 °C fluid temperature ³⁹⁾
Brackish water	G1 / C1	K/K-max, F/F-max	Material variant C1 or G1 (with 250 µm two-component epoxy resin), depending on salt content
Corrosive industrial waste water	C	K/K-max, F/F-max	Material variant C1 or C2 based on fluid analysis

³⁷⁾ The hydrocarbons mentioned may occur in very high concentrations due to the difference in specific weight and their low solubility. If this is the case, contact KSB.

³⁸⁾ The required material variants highly depend on the operating hours, rotational speed and flow velocity.

³⁹⁾ Higher fluid temperatures on request.

Shaft seal

Available shaft seal types per bearing bracket

Table 10: UE/WE/XE/YE/ZE motors

Mechanical seal with elastomer bellows ⁴⁰⁾	Double cartridge seal ⁴¹⁾	Pump-end mechanical seal with covered spring ⁴¹⁾

Table 11: UF/XF motors

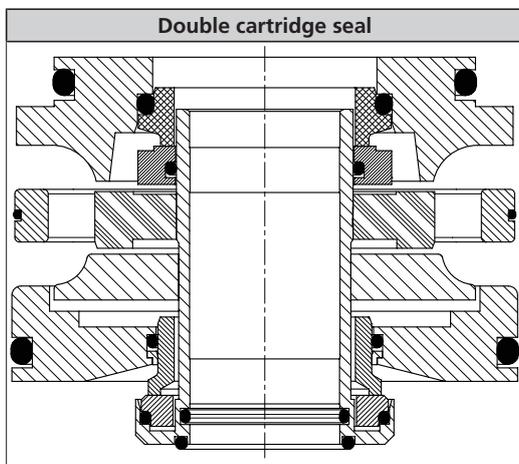

Table 12: UN/WN/XN/YN/ZN motors

Mechanical seal with elastomer bellows ⁴⁰⁾	Pump-end mechanical seal with covered spring ⁴¹⁾	Stationary mechanical seal with spring outside of fluid handled

For more information, see overview of product features.

2553.524/16-EN-US

⁴⁰⁾ For all types of waste water

⁴¹⁾ For very abrasive fluids or fluids containing metallic particles (e.g. shavings from drilling)

⁴⁴ Data applies to maximum impeller diameter and impeller with water fill.

⁴⁵ Permissible operating pressure = inlet pressure + pressure at Q = 0

Size	Impeller type	Material variant	Impeller				Installation type				Moment of inertia J ⁽⁴⁾ [kgm ²]
			Impeller channels	Free passage	Max. impeller diameter	Min. impeller diameter	D, H		K, S, P

Selection charts

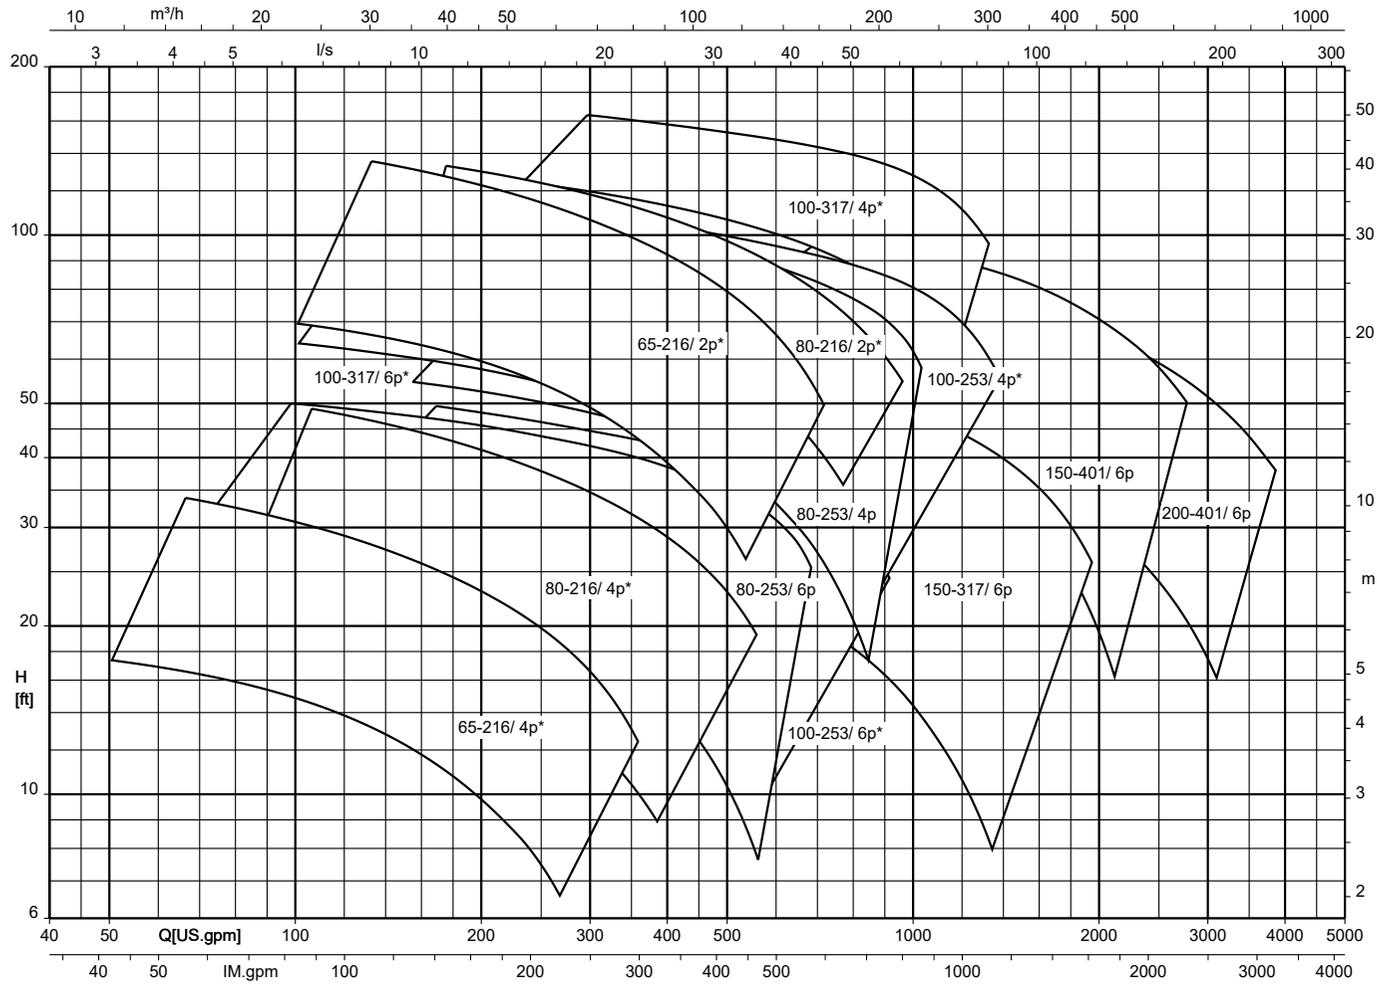

Amarex KRT S + *S-max, n = 3500 rpm

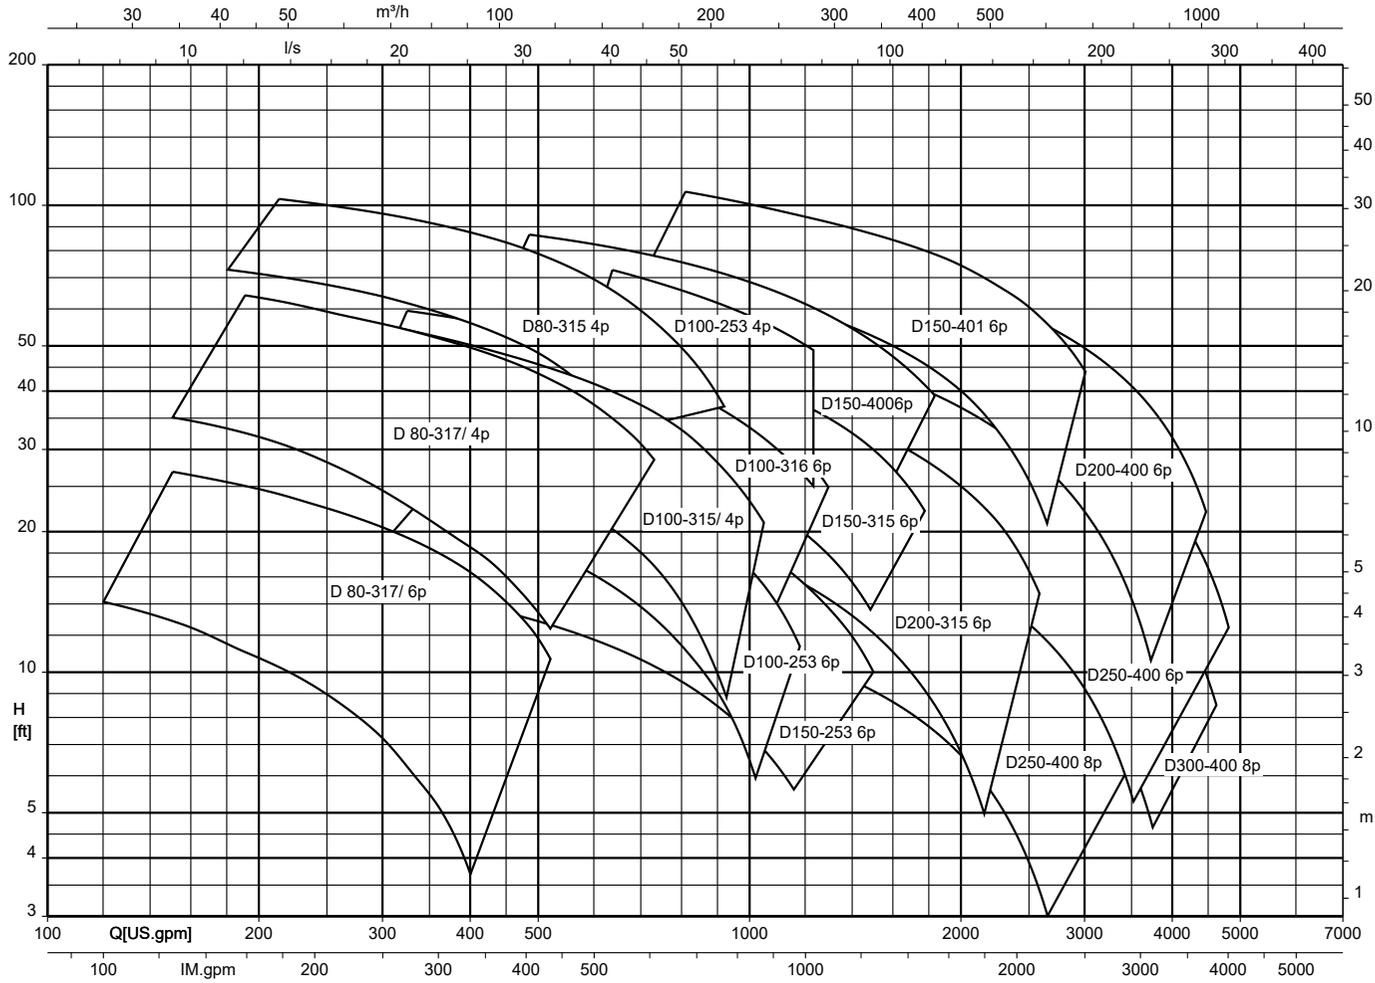

Amarex KRT F + *F-max, n = 3500/1750/1160 rpm

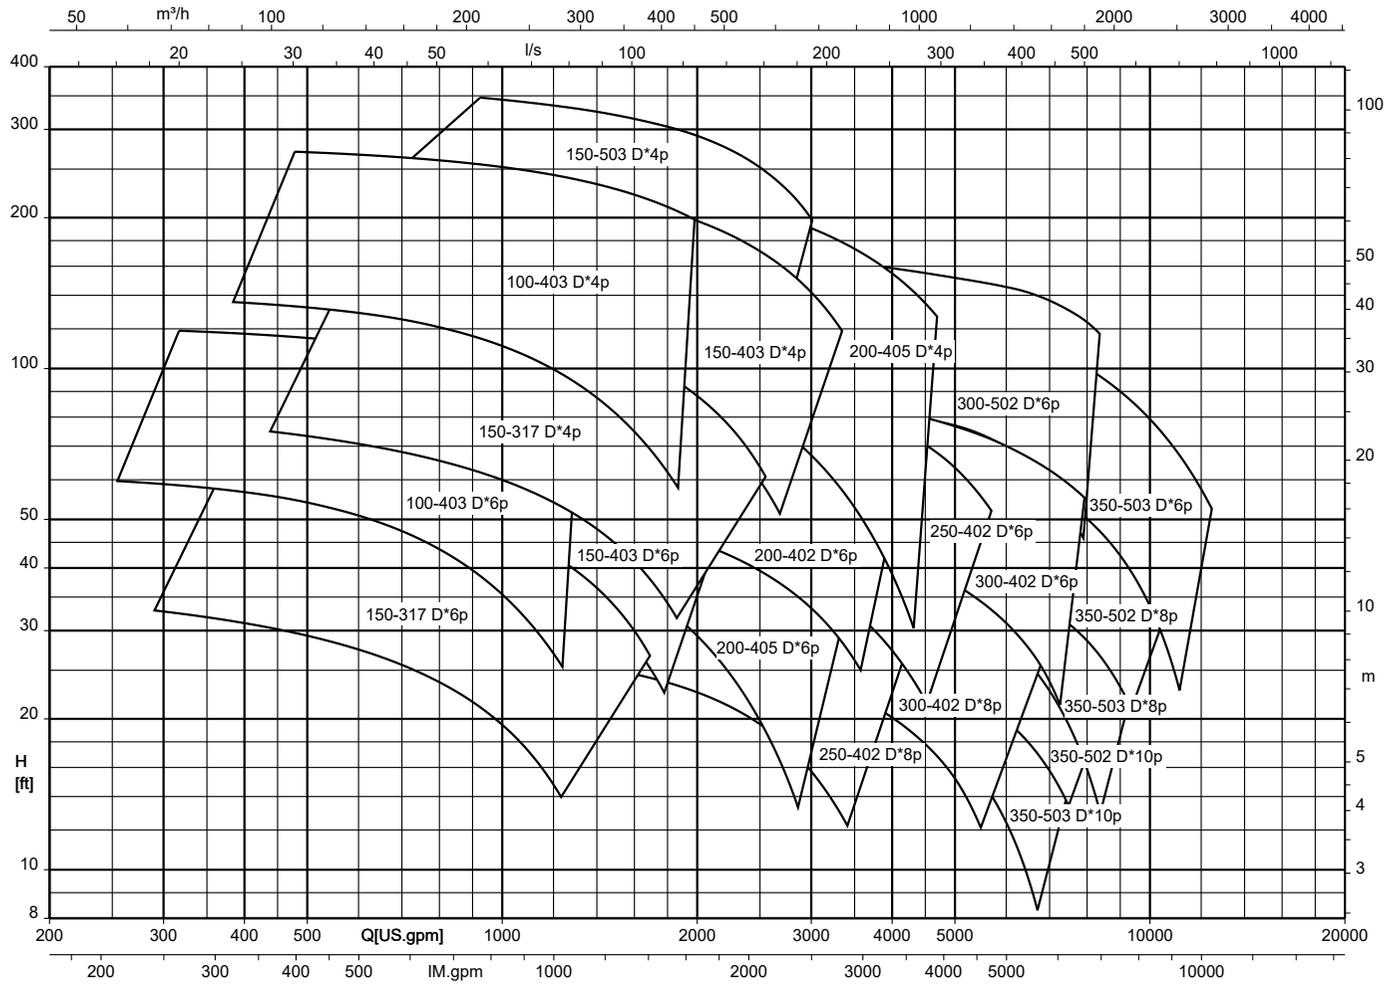

Amarex KRT E + *E-max, n = 3500/1750/1160 rpm

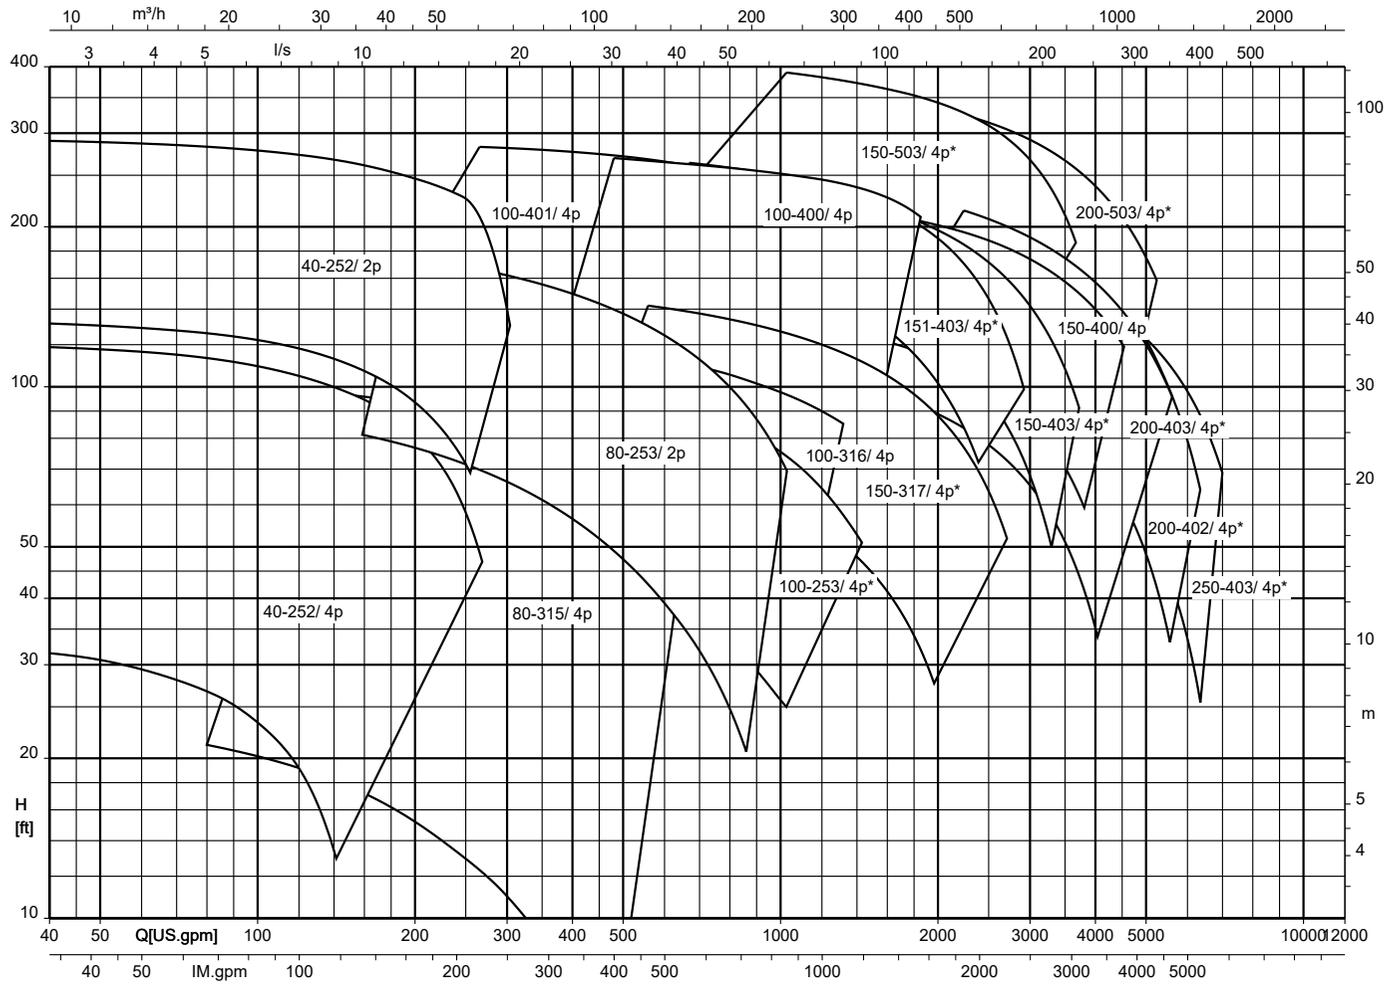

Amarex KRT D, n = 1750/1160/875 rpm

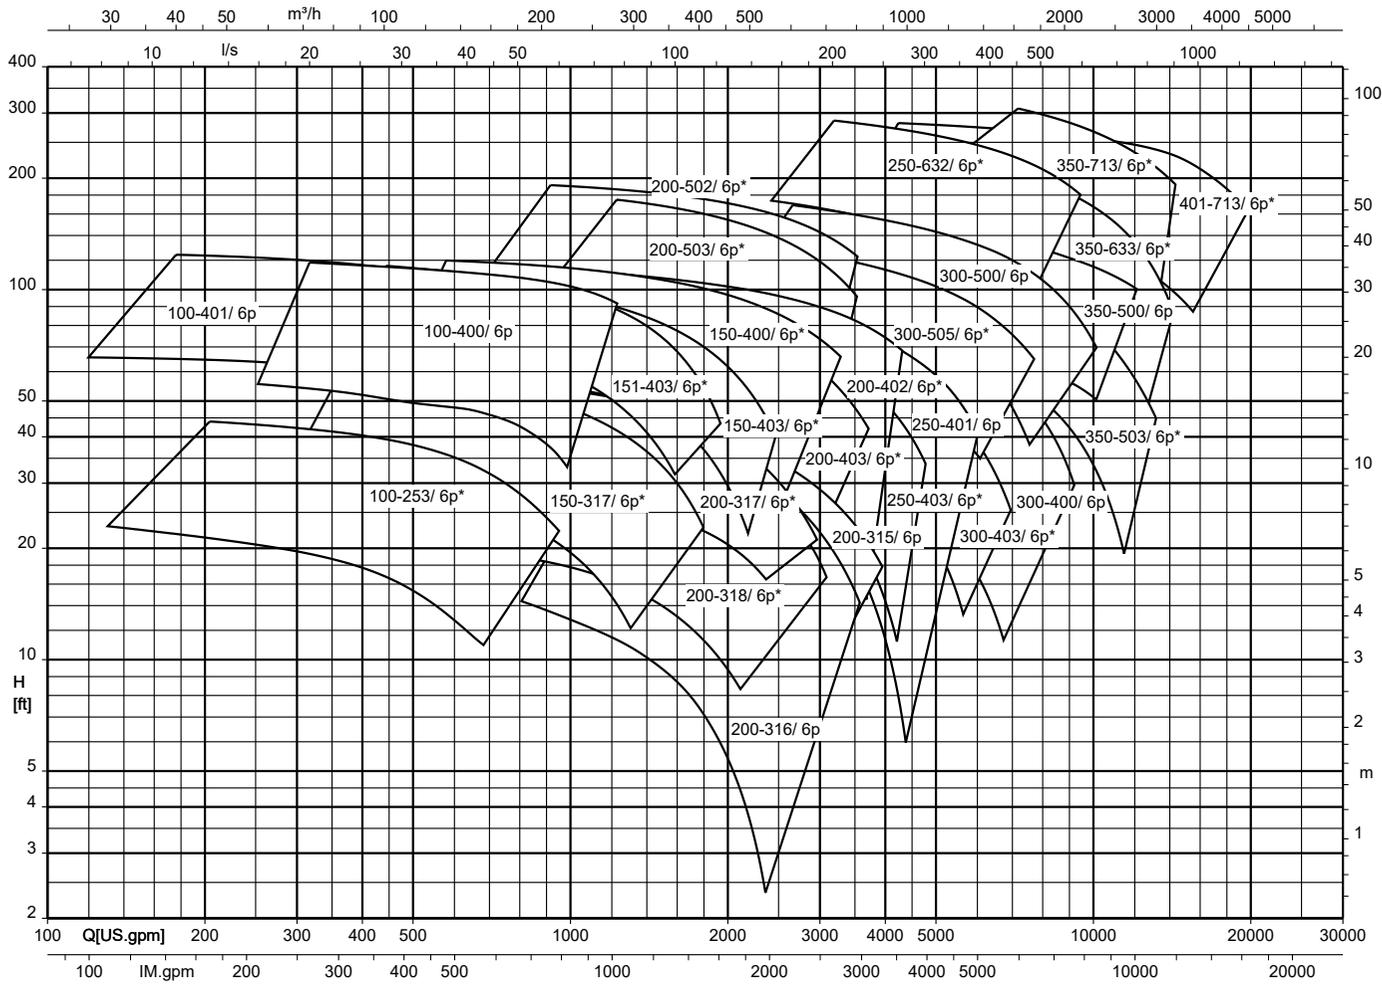

Amarex KRT, D-max, n = 1750/1160/875 rpm

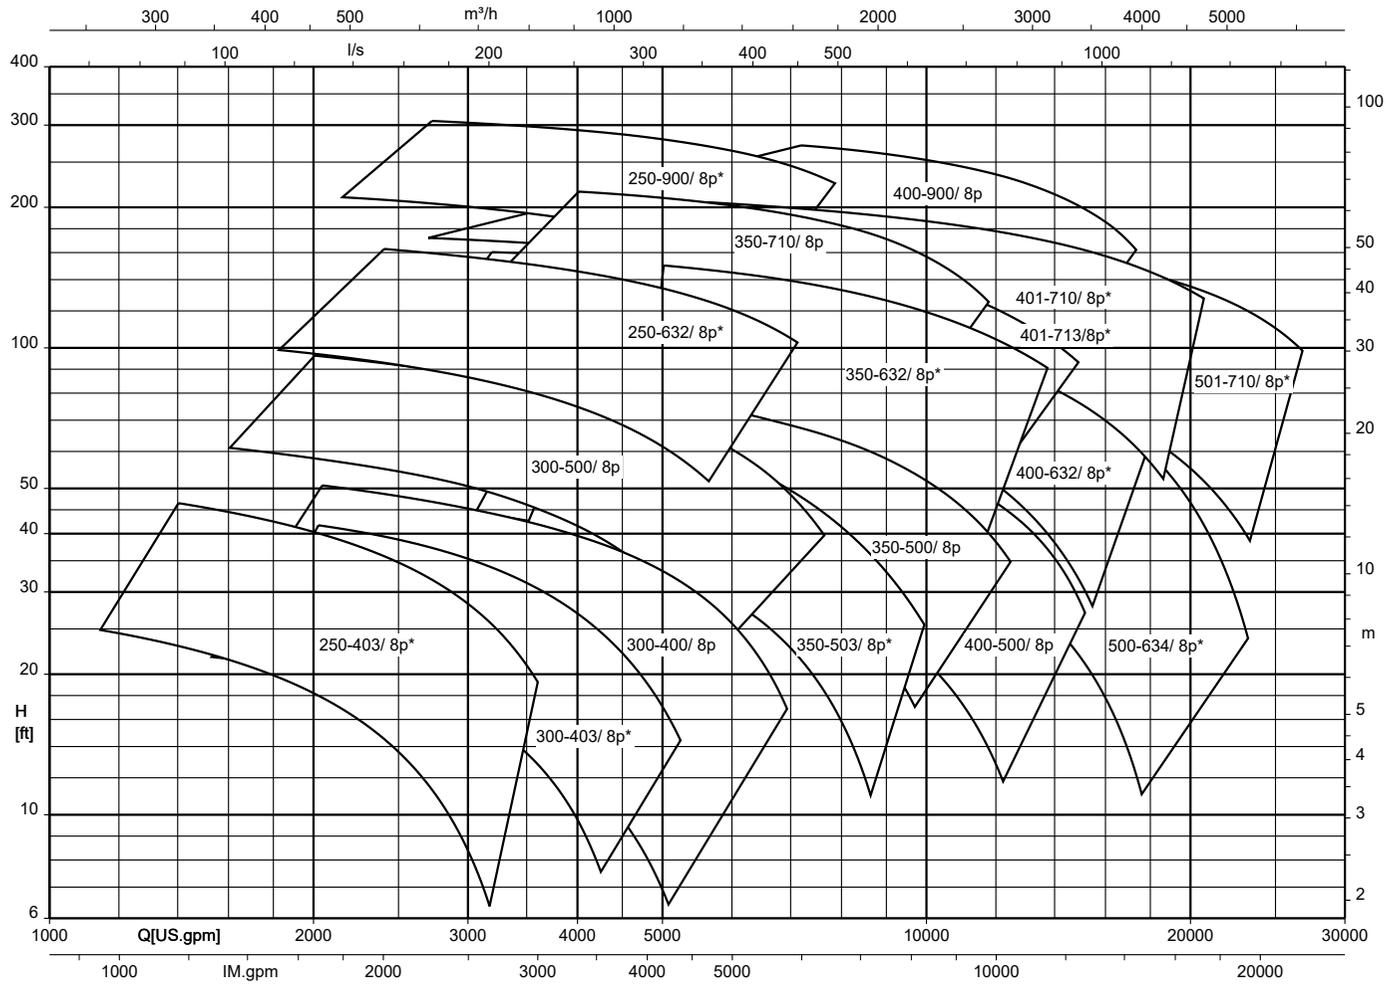

Amarex KRT K + *K-max 40-.../80-.../100-.../150-.../200-.../250-..., n = 3500/1750 rpm

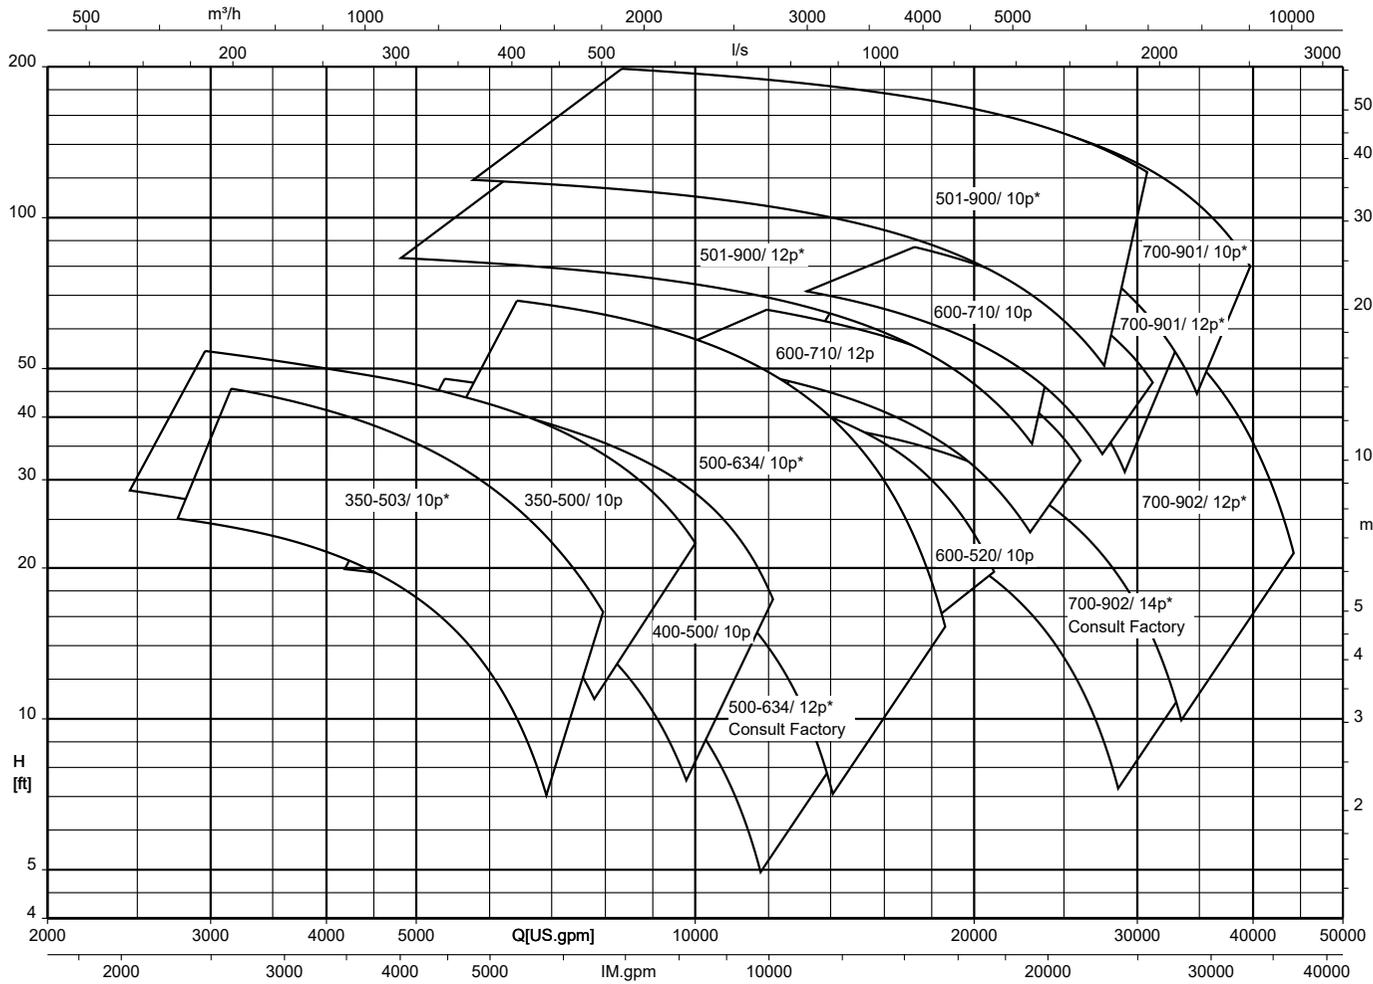

Amarex KRT K + *K-max 100-.../150-.../151-.../200-.../250-.../300-.../350-..., n = 1160 rpm

Amarex KRT K + *K-max 200-.../250-.../300-.../350-.../400-.../500-..., n = 875 rpm

Amarex KRT K + *K-max 350-.../500-.../600-.../700-..., n = 700/585/500 rpm

Installation types

Fig. 1: Installation types

1	Installation type D: stationary dry installation, vertical (S1 duty)
2	Installation type H: stationary dry installation, horizontal (S1 duty)
3	Installation type K: wet installation (S1 duty with motor outside of the fluid possible) with guide rail arrangement Installation type S: stationary wet installation (S1 duty with submerged motor) with guide rail arrangement
4	Installation type K: stationary wet installation (S1 duty with motor outside of the fluid possible) with guide cable arrangement Installation type S: stationary wet installation (S1 duty with submerged motor) with guide cable arrangement
5	Installation type P: wet installation of transportable model (S1 duty with submerged motor)

Pump sets of installation types D, H and K

are suitable for continuous operation with the motor outside the fluid. Cooling is effected by means of air convection. Versions with a cooling jacket have an additional internal cooling circuit.

Pump sets of installation types P and S

are designed for continuously submerged operation. The motor is cooled by the fluid handled on the motor surface. Operation with the motor outside the fluid handled is possible for short periods.

Scope of supply

Stationary dry installation - vertical (installation type D)

- Pump set complete with electric cables
- Suction elbow with inspection hole⁴⁶⁾ (optional) and fastening elements
- Optional: intake elbow with inspection hole

Stationary dry installation - horizontal (installation type H)

- Pump set complete with electric cables
- Foundation rails⁴⁷⁾
- Suction-side flanged spacer with inspection hole⁴⁸⁾ (optional)
- Amaslide maintenance aid (optional)

Stationary wet installation (installation types K and S)

- Pump set complete with electric cables
- Claw with sealing elements and mounting elements
- Lifting rope, lifting chain or lifting bail (optional)
- Mounting bracket with mounting elements
- Flanged bend and fastening elements
- Guide cable / guide rail (guide rails are not included in KSB's scope of supply)

Transportable model for wet installation (installation type P)

- Pump set complete with electric cables
- Foot plate or pump stool with mounting elements

⁴⁶⁾ For nominal discharge nozzle diameter \geq DN100

⁴⁷⁾ For UE/XE motors only

⁴⁸⁾ For nominal discharge nozzle diameter \geq DN100

General assembly drawings with list of components
