Die in den Kennlinienblättern angegebenen NPSH-Werte sind Minimalwerte, die der Kavitationsgrenze entsprechen; sie gelten für entgastes Wasser.

Aus Sicherheitsgründen sind daher die Kurvenwerte für die Anwendung um mindestens 0,5 m zu erhöhen.

Garantien der Meßwerte in den Kennlinien nach DIN 1944/III. Die Förderhöhen und Leistungsangaben gelten für Fördermedien mit der Dichte $\rho = 1,0 \text{ kg/dm}^3$ und eine kinematische Viskosität ν bis $20 \text{ mm}^2/\text{s}$.

Ist die Dichte $\rho \neq 1,0$, dann muß die Leistungsangabe mit ρ multipliziert werden.

The NPSH values given in the performance curve sheets are minimum values which correspond to the inception of cavitation, they apply to degassed water.

For reasons of safety the curve values must, therefore, be increased by at least 0.5 m for application.

For guarantees of measured values see performance curves to DIN 1944/III.

The total heads and the performance characteristics refer to mediums compressed with $\rho = 1.0 \text{ kg/dm}^3$ and a kinematic viscosity ν up to $20 \text{ mm}^2/\text{s}$.

If the density $\rho \neq 1.0$, the performance characteristics are to be multiplied by ρ .

Les valeurs du NPSH indiquées par les feuilles de courbes sont des valeurs minimales qui correspondent à la limite de cavitation; elles concernent le pompage d'eau dégazée.

Pour des raisons de sécurité, les valeurs de la courbe sont à augmenter d'au moins 0,5 m pour l'application.

Valeurs mesurées des courbes garanties selon DIN 1944/III.

Les caractéristiques de la pompe indiquées sont valables pour un fluide pompé d'une densité égale à 1 kg/dm^3 , et pour une viscosité cinématique n'excédant pas $20 \text{ mm}^2/\text{s}$.

Si la densité du fluide pompé a une valeur différente de 1,0, multiplier par cette valeur les caractéristiques indiquées.

I valori di NPSH indicati nei fogli delle curve sono valori minimi, che corrispondono al limite della cavitazione; essi valgono per acqua degasata.

Per motivi di sicurezza i valori delle curve devono quindi venir aumentati di 0,5 m per l'impiego pratico.

I valori misurati delle curve sono garantiti secondo DIN 1944/III. Le prevalenze e le potenze indicate valgono per liquidi con densità $\rho = 1,0 \text{ kg/dm}^3$ ed una viscosità cinematica ν sino a $20 \text{ mm}^2/\text{sec}$. al massimo.

Se la densità $\rho \neq 1,0$, la potenza indicata deve venir moltiplicata per ρ .

De in de grafieken aangegeven NPSH-waarden zijn minimale waarden die overeenkomen met de kavitatiegrenzen; zij gelden voor niet gashoudend water.

Uit veiligheidsoverwegingen dienen de grafiekwaarden voor de toepassing met tenminste 0,5 m verhoogt te worden.

De meetwaarden in de grafieken voldoen aan DIN 1944/III.

De obvoerhoogten en afgegeven vermogens gelden voor media met een dichtheid $\rho = 1,0 \text{ kg/dm}^3$ en een kinematische viscositeit ν tot max. $20 \text{ mm}^2/\text{s}$.

Als de dichtheid $\rho \neq 1,0$, dan dient het afgegeven vermogen met ρ vermenigvuldigt te worden.

Los valores NPSH indicados en las hojas de curvas características son valores mínimos que corresponden al límite de cavitación y rigen para agua desgasificada.

En la práctica, los valores de las curvas deben aumentarse por lo menos 0,5 m por razones de seguridad.

Garantías de los valores de medición en las curvas características según DIN 1944/III.

Las alturas manométricas y las indicaciones sobre potencias requeridas valen para líquidos de elevación con densidad $\rho = 1,0 \text{ kg/dm}^3$ y una viscosidad cinemática hasta un máximo de $20 \text{ mm}^2/\text{s}$.

Si la densidad $\rho \neq 1,0$ debe multiplicarse la potencia indicada por ρ .
