Control Valves / Measurement Valves

Control Valves to DIN/EN

BOA-CVE C/CS/W/IMS/EKB/ IMS EKB

Main applications

BOA-CVE C / BOA-CVE CS / BOA-CVE W:

- Hot-water heating systems
- Air-conditioning systems
- Heat recovery systems

BOA-CVE IMS:

- Hot-water heating systems
- Air-conditioning systems
- Cooling circuits

BOA-CVE EKB / BOA-CVE IMS EKB:

- Domestic water supply
- Water supply systems
- Air-conditioning systems
- Cooling circuits

Fluids handled

BOA-CVE C / BOA-CVE CS / BOA-CVE W:

- Water
- Water/glycol mixtures
- Not suitable for fluids containing mineral oils, steam or fluids liable to attack EPDM and cast iron.
- Other fluids on request.

BOA-CVE IMS:

- Hot water for heating systems, with or without glycol ($\leq 60\%$)
- Cold water for air-conditioning systems, with or without glycol ($\leq 60\%$)
- The fluid handled should meet the requirements as specified in VdTÜV/AGFW TCh 1466 or VDI 2035.
- Fluids containing gas or air can be measured with ultrasound equipment to a limited extent only. Proper venting of the systems is therefore essential.

BOA-CVE EKB / BOA-CVE IMS EKB:

- Drinking water
- Service water
- Not suitable for steam or fluids liable to attack EPDM and the electrostatic plastic coating.
- Other fluids on request.

Operating data

Min. permissible temperature [°C]	≥ -10
Max. permissible temperature [°C]	$\leq +120^3)$

Selection as per pressure/temperature ratings (⇒ Page 6)

Design details

Design

Control valve:

- Straight-way valves PN 6 to 16 for flange connections to DIN EN 1092-2 in short or DN face-to-face length
- BOA-CVE IMS and BOA-CVE IMS EKB with sensors for measuring flow rate and temperature
- K_{vs} values: 3 to 700 m³/h
- Rangeability 100:1
- EPDM-encapsulated control valve plug
- Maintenance-free stem seal with EPDM profile ring
- Marked in accordance with DIN EN 19 (ISO 5209)

Actuators (technical data refers to basic configuration):

- Configurable, microprocessor-controlled actuators
 - Supply voltage: 24 V AC/DC
 - Position setpoint: 2 - 10 V DC
 - Actual-position feedback: 2 - 10 V DC
 - Control valve characteristic: linear
 - Leakage rate: 0.05 % of K_{vs}

¹ BOA-CVE IMS EKB: 40 °C

² BOA-CVE CS: DN 20 - 200

³ BOA-CVE EKB: 80 °C

Limit switching force-dependent in closing direction and stroke-dependent in opening direction

- 3-point actuators
- Supply voltage: 230 V AC
- Actual-position feedback: 2 limit switches
- Leakage rate A to DIN EN 12266-1, drop-tight
- Stopping via limit switches in closing direction and opening direction
- Actuating time and actuating speed can be freely selected as a function of actuator type and K_{vs} value.
- Operating data stored in permanent memory
- After a power failure, operation is resumed in accordance with the operating data.

Variants

- Actuator configured to match the order specification
- Integrated process controller
- Power back-up unit
- Heating of the motor space
- Other supply voltages on request

Valve body materials

Table 2: Overview of available materials

Material	Material number
EN-GJL-250	5.1301

Product benefits

- Individually programmable actuators programmed at the factory, for optimum adaptation to all applications
- Maintenance-free design with stem sealed by EPDM profile ring
- Soft-seated valve disc enables drop-tight shut-off.
- Weight of control valve reduced by at least 50 % to simplify installation and cut installation costs
- User-definable continuous control signal and actual-position feedback for optimum control options

- Programmable K_{vs} values
- Four K_{vs} values per nominal size
- Optionally available with integrated process controller (for EA-C actuators) for adaptation to numerous control tasks

Product information

Product information as per Regulation No. 1907/2006 (REACH)

For information as per European chemicals regulation (EC) No. 1907/2006 (REACH) see <https://www.ksb.com/en-global/company/corporate-responsibility/reach>.

Product information as per Pressure Equipment Directive 2014/68/EU (PED)

The valves satisfy the safety requirements of Annex I of the European Pressure Equipment Directive 2014/68/EU (PED) for fluids in Group 2.

Product information as per Pressure Equipment (Safety) Regulations 2016

The valves satisfy the safety requirements of the UK Pressure Equipment (Safety) Regulations 2016 (PER) for fluids in Group 2.

Certifications

Table 3: Overview

Label	Effective in:	Comment
	Germany	Approved in accordance with German drinking water regulation BOA-Control EKB / BOA-Control IMS EKB only

Note on DVGW approval:

Valid for BOA-CVE EKB and BOA-CVE IMS EKB only.

Pressure/temperature ratings

Table 5: Test pressure and operating pressure

Nominal pressure	Nominal size	Shell test	Leak test (seat)	Permissible operating pressure ⁴⁾
		With water to DIN EN 12266-1	P10, P11	
PN	DN	[bar]	[bar]	[bar]
6	15 - 200	9	6,6	6
16 ⁶⁾	15 - 200	24	17,6	16

Valve characteristics

The basic control valve configuration runs on a linear characteristic.

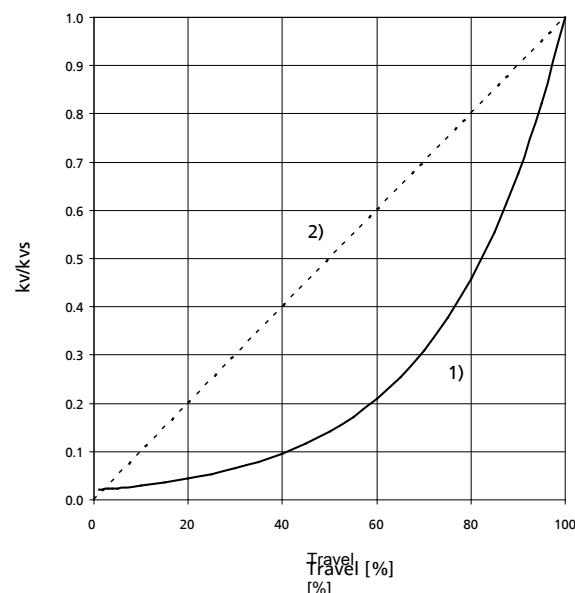

Fig. 1: Valve characteristics

1)	Equal-percentage (at customer's request)	2)	Linear (basic parameter configuration)
----	--	----	--

Maximum permissible closing pressures

The valves are available for the following leakage rates without extra charge:

- Leakage rate 0.05 % of K_{vs}
- Leakage rate 0.01 % of K_{vs}
- Leakage rate A, drop-tight, to DIN EN 12266-1

The following tables can be used to select a suitable control valve as a function of the required closing pressure, leakage rate and K_{vs} value.

⁴ Static load

⁵ BOA-CVE IMS EKB up to 40 °C, BOA-CVE EKB up to 80 °C

⁶ EKB variants also available in PN 10

⁹⁾ Maximum permissible closing pressure at leakage rate A (drop-tight) to DIN EN 12266-1 in bar

Flow characteristics

A maximum flow velocity of 3 to 4 m/s in the pipe cross-section must not be exceeded.

Table 9: Description of units

Unit	Description
$\Delta p_{\max.}$	Maximum permissible differential pressure across the control valve's control path ($\Delta p_{\max.} = 0.3 \cdot (p_1 - p_v)$ for water)
Δp_{V100}	Differential pressure across the open control valve
Q_{100}	Nominal volume flow rate

Technical data

Process controller

Optional process controller for continuous-action actuators
(EA-C 20 to EA-C 140)

Functional schematic of process controller

1)	Actuator stroke	2)	Setpoint Y
3)	Volume flow rate Q_{actual}	4)	Q
5)	Y		

The actuator can be equipped with an integrated process controller, which may be used as a constant-variable controller for an independent control loop.

Possible applications:

- Constant-temperature control
- Volume flow rate control

Configure the control parameters of the PI (proportional-integral) controller using a parameterisation kit. The setpoint signal and the sensor signal must have the same measuring range.

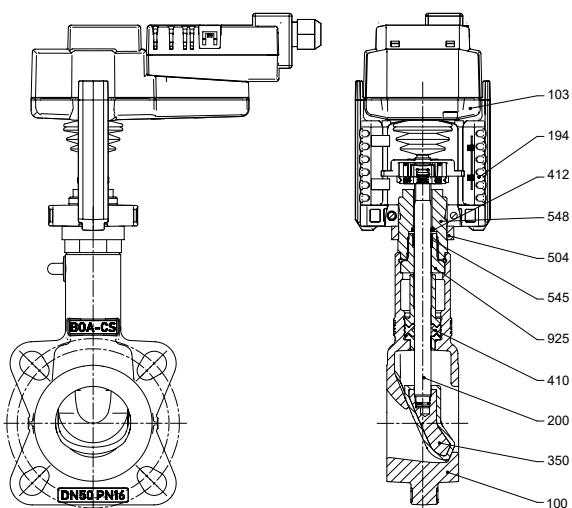

Table 12: Accessories

Description	Mat. No.
Parameterisation kit	46001269

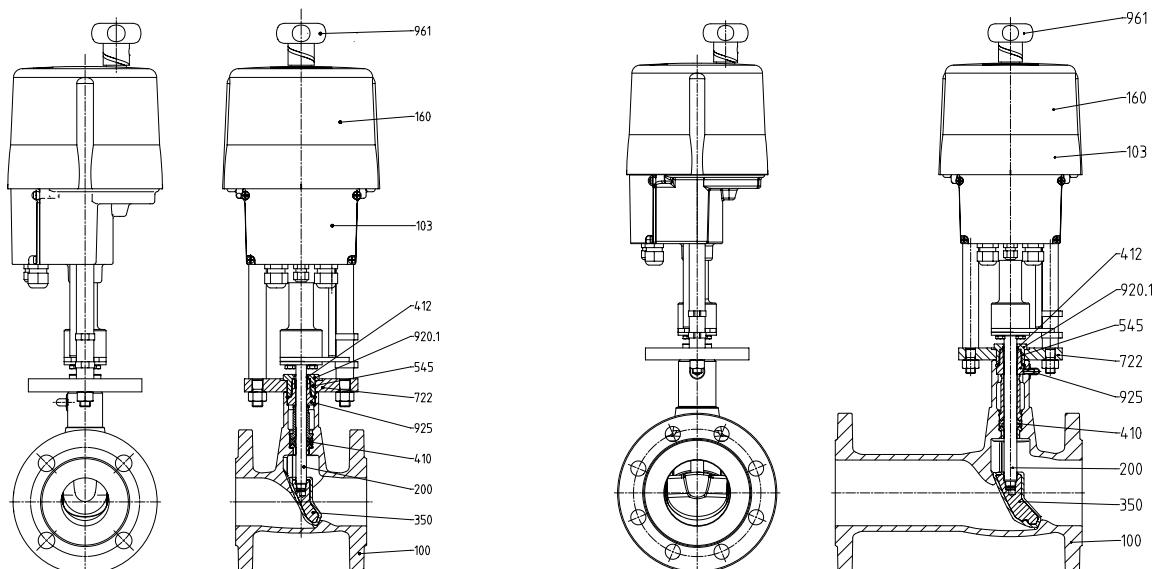

The sensor used must supply an active signal (e.g. 4 - 20 mA or 0/2 - 10 V). The setpoint can be set externally via an active signal, or the device can be supplied with an internal setpoint as per customer specification.

If combined with the process controller, BOA-CVE IMS or BOA-CVE IMS EKB with BOATRONIC MS-420 can be used for this purpose.

Refer to type series booklet 7128.1 for further data.

Mating dimensions as per standard

Face-to-face lengths: DIN EN 558/1, ISO 5752/1

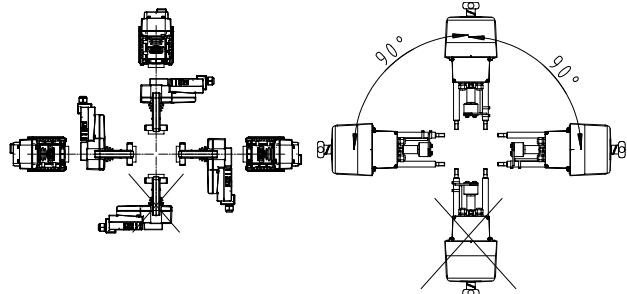

Flanges: DIN EN 1092-2, flange type 21

Flange facing: DIN EN 1092-2, type B

Installation information

- Flow through control valves is in the direction of the embossed arrow on the valve body as standard.
- In heating systems, the valves should preferably be installed in the return line, which is characterised by lower temperatures. This will prolong the stem seal's service life.
- Water quality requirements to VdTÜV/AGFW TCh 1466.
- Recommendation: A strainer fitted upstream of the control valve will further enhance the control valve's functional reliability.

Installation positions:

EA-B 10¹³⁾

EA-C 20 to EA-C 140 and
EA-C 3-point¹³⁾

¹³ Installation of BOA-CVE IMS and BOA-CVE IMS EKB with the valve stem in a horizontal position is not allowed.

Chemical resistance charts

BOA-CVE C

Chemical resistance chart

The information provided in this chemical resistance chart is based on experience, the Dechema lists as well as manufacturer information. Corrosion resistance is largely dependent on the operating conditions, temperatures and concentrations. Hydroabrasive wear in fluids containing solids is not covered in this list. The information provided in this list is for orientation only. Warranty claims may not be asserted on the basis of this list.

Table 24: Symbols key

Symbol	Description
✓	The fluid handled is not normally aggressive toward the materials. Valve can be used if ¹⁸⁾ and ¹⁹⁾ are observed.
✗	The fluid handled is aggressive toward the materials. Valve cannot be used.
○	The materials and/or the valve can only be used under certain operating conditions. Please enquire accordingly, stating the operating conditions such as concentration, temperature, pH and composition of the fluid handled.

Table 25: Chemical resistance chart for water¹⁸⁾

Fluids handled	
Bathing water (fresh water)	○
Bathing water (seawater)	✗

Fluids handled	
Landfill gas	○
Oil-containing compressed air	✗
Aqueous glycerine	○
Carbon dioxide (gas)	✓
Carbon dioxide (aqueous solution)	✗
Oxygen O ₂	✗

¹⁸⁾ General criteria for water to be handled by products made of non-alloyed materials: pH > 7; chlorides (Cl-) < 150 mg/kg; chlorine (Cl) < 0.6 mg/kg. Other factors to be considered: hardness, carbon dioxide content (CO₂), oxygen (O₂) and dissolved substances. Contact KSB if limits are exceeded!

¹⁹⁾ Without larger solids or stringy material

²⁰⁾ Can only be used for installations and the respective water quality as specified in the VdTÜV 1466 or VDI 2035 guidelines. A pH ≥ 9.5 and an oxygen content of ≤ 0.02 mg/l are also recommended.

BOA-CVE CS

Chemical resistance chart

The information provided in this chemical resistance chart is based on experience, the Dechema lists as well as manufacturer information. Corrosion resistance is largely dependent on the operating conditions, temperatures and concentrations. Hydroabrasive wear in fluids containing solids is not covered in this list. The information provided in this list is for orientation only. Warranty claims may not be asserted on the basis of this list.

Table 30: Symbols key

Symbol	Description
✓	The fluid handled is not normally aggressive toward the materials. Valve can be used if ²¹⁾ and ²²⁾ are observed.
✗	The fluid handled is aggressive toward the materials. Valve cannot be used.
○	The materials and/or the valve can only be used under certain operating conditions. Please enquire accordingly, stating the operating conditions such as concentration, temperature, pH and composition of the fluid handled.
