Butterfly Valves

Centred-disc Butterfly Valves

ISORIA 20

Main applications

- Cooling circuits
- Seawater desalination/reverse osmosis
- Flue gas desulphurisation
- Paper and cellulose industry
- Washing plants
- General irrigation systems
- Shipbuilding
- Pipelines and tank farms
- Process engineering
- Sugar industry
- Pressure boosting
- Water treatment/conditioning

Fluids handled

- Wash water
- Seawater
- Service water
- Cooling water
- Fire-fighting water
- Drinking water
- Brackish water
- River, lake and groundwater
- Abrasive fluids
- Fluids containing mineral oils
- Solids-laden fluids
- Organic fluids
- Radioactive fluids

- Solvents

Operating data

Operating properties

Characteristic	Value
Nominal pressure	PN 20
Nominal size	DN 32-600
Max. permissible pressure	20 bar
Max. permissible temperature	+80 °C
Min. permissible temperature	-10 °C
Actuation at ΔP	20 bar (max.) at ambient temperature
Suitable for vacuum applications down to	0.3 bar absolute
Max. permissible flow velocity at operating pressure	1.5 to 3 m/s (max.) for water

Design details

Design

- Semi-lug body - T2: DN 32 - 600
- Full-lug body with flat faces - T3: DN 32 - 600
- Full-lug body with raised faces - T4: DN 32 - 600
- Flanged body with flat faces - T5: DN 200 - 600
- Downstream dismantling possible with body types T2, T3, T4 and T5
- Dead-end service with counterflange possible with all body types
- Design to EN 593 and ISO 10631
- Top flange to ISO 5211
- Marked in accordance with EN 19
- Absolutely tight shut-off (no leakage visible to the naked eye) in either direction of flow in accordance with EN 12266-1, leakage rate A, and ISO 5208, category A.
- Face-to-face length to ISO 5752-20 and EN 558-1-20
- EN, ASME, JIS, AWWA connections possible.
- Body with polyurethane coating, thickness 80 μm , colour: RAL 5002, blue.
- Valve disc made of nodular cast iron, epoxy-coated, thickness 80 μm , colour: RAL 8012, brown
- The valves satisfy the safety requirements of Annex I of the European Pressure Equipment Directive 97/23/EC (PED) for fluids in Groups 1 and 2.
- Valves with actuators can meet the requirements of the 2006/42/EC Machinery Directive for partly completed machinery.
- The valves meet the requirements of the REACH 1907/2006 regulation. None of the substances listed in the candidate list and in Annex XIV of the regulation is present in a concentration above 0.1 % (w/w) (Article 33/REACH).

Variants

- Valve cleaned and packaged, free from substances which impair the adhesive strength of paint
- S / SR / SP / CR / CM quarter-turn levers
- MN / MR manual gearboxes
- ACTELEC electric actuators
- ACTAIR / DYNACTAIR pneumatic actuators

- ACTO/DYNACTO/ENNACTO hydraulic actuators
 - AMTROBOX control unit for position indication
 - AMTRONIC valve controller with compressed air supply via directional control valve
 - SMARTRONIC intelligent positioner
 - ATEX design in compliance with the 94/9/EC Directive
- 6. Temperature
 - 7. Materials (body, valve disc, seat)
 - 8. Line connection, flange facing and flange surface quality
 - 9. Actuator/automation
 - 10. Reference number of type series booklet

Cast steel	1.0619	T5	DN 200-600	1

Product benefits

- Spherically machined valve disc with rounded sealing contour
 - ensures durable and permanently tight shut-off
- Splined or keyed connection between stem and valve disc
 - Dry stem, no contact with fluid handled
- Sealing to atmosphere and tight shut-off are ensured,
 - even when the actuator has been removed
- Marking indicates position of valve disc
- Valve equipped with stainless steel bearings with reinforced PTFE coating
- The elastomer liner provides tight sealing at the flanged line connections, eliminating the need for a flange gasket.
- Valve certified to
 - ACS / DVGW / WRAS for drinking water applications, with XC elastomer liner
- Elastomer liner
 - EPDM - XC approved by KTW, ILP Nancy, WRC
- Valve actuation options:
 - Manual
 - Electric
 - Pneumatic
 - Hydraulic

Manual actuation

The selection of actuators given below typically applies to butterfly valves handling liquid fluids at the maximum flow velocities shown.

For valves handling non-lubricating fluids (gas), a max. flow velocity of 50 m/s applies.

Higher flow velocities and further actuator/valve combinations are possible, depending on the operating conditions and hydraulic characteristics. Please contact us.

Dead-end service and downstream dismantling

Downstream dismantling

For downstream dismantling,
successively loosen diagonally opposed tie rods.

Dead-end service

Bolting and weights

Semi-lug body - T2

The drawings do not indicate the exact product design
(number of tapped lugs/tapped holes/through-holes)

N.B.: Bolting is not included in our standard scope of supply.

Length of tie rod $L = l1 + 2e + 2f$

- L: minimum length of tie rods
- l1: face-to-face length of butterfly valve
- e: flange thickness (customer-specific)
- f: thickness of nut + standardised overhang of tie rod

Bolt length at stem passage

$A = e + X$

- A: max. bolt length
- X: max. thread engagement depth
- e: flange thickness (customer-specific)
- B: min. thread length > A-e

Semi-lug body - T2

Flange dimensions

The valves can be installed between all commercial mating flanges and line connections without requiring any flange gaskets.

The elastomer liner alone provides a tight seal at the flange connections.

Please verify that the connection meets the requirements given below.

The flange dimensions indicated in the table apply to all body types.

Ø2a and Ø3: flange face diameter

Ø2b: pipe OD with loose plate flange to DIN 2642 and NFE 29-251

Dimensions
