

**MODEL****VG**

## RUBBER SLEEVE KNIFE GATE VALVE

The VG model knife gate is a bi-directional wafer valve equipped with two metal reinforced rubber sleeves, designed for applications with abrasive slurries. The VG slurry knife gate valve is mainly used in industries such as:

- Mining
- Chemical plants
- Etc.
- Power plants
- Wastewater treatment

### Sizes:

DN 2"/50mm to 36"/DN 900mm (larger DN on request)

### Working pressure:

DN 2"/ 50mm to 16"/400mm 10 kg/cm<sup>2</sup> (150 psi)  
 DN 18"/450mm to 24"/600mm 6 kg/cm<sup>2</sup> (90 psi) or 10 kg/cm<sup>2</sup> (150 psi)  
 DN 28"/700mm to 36"/900mm 5 kg/cm<sup>2</sup> (75 psi)  
 Higher pressures and/or diameters on request

### Standard Flange connection:

DIN PN 10 and ANSI B16.5 (class 150)

Other: (On request)

DIN PN 6

DIN PN 16

DIN PN 25

BS "D" and "E"

ANSI 125

Others on request

### Directives:

2006/42/CE (MACHINES)

97/23/CE (PED) Fluid: Group 1(b), 2 (Cat. I, mod. A)

94/9/CE (ATEX)

All ORBINOX valves are tested prior to shipping

### STANDARD PARTS LIST

Part:	Materials:
1- Body	Ductile iron A536 (60-40-18) / 0.7040 / GJS 400
2- Gate	AISI 304 (1.4301)
3- Sleeves	Natural rubber
4- Packing	EPDM
5- Gland Follower	A570 GR.40 / 1.0044 Epoxy coated
6- Yoke	A570 GR.40 / 1.0044 Epoxy coated
7- Grease Nipple	Zinc coated carbon-steel
8- Stem	AISI 430 / 1.4016
9- Stem protector	A570 GR.40 / 1.0044 Epoxy coated
10- Bevel Gear	-

## DESIGN FEATURES

### BODY:

Wafer style cast monoblock, for installation between flanges, with reinforced ribs in larger diameters, providing the body with extra strength. Internal body design allows the gate to be fully guided. It is equipped with two machined lateral mouths where the sleeves fit perfectly. The grease nipples allow the gate to be lubricated, thus enhancing its capacity to slide between the sleeves. Additionally, the design allows draining through the lower part, where a cover or a bottom splash guard can be installed. Some leakage will occur from the bottom of the valve during operation. This allows solids to be flushed from body cavity and will ensure the full stroke of the valve.

### GATE:

Made of stainless steel, polished on both sides, and of rectangular shape, the gate is machined to an edge. As well as reducing friction and damage to the seats, this design allows to cut perfectly through the fluid. The material can be changed upon request, thus allowing greater working pressures.

### RUBBER SLEEVES:

The seat is made up of two highly resistant, long-lasting sleeves, made of natural rubber with a metal core. The patented sleeve design allows for maximum flexibility during gate travel, minimising the effort necessary for its operation. In the open position, the two sleeves are in permanent contact with each other, assuring full bore flow. There are no seat cavities which may cause material build-up, and the fluid does not come into contact with the metallic parts of the valve. This design allows for easy replacement of damaged sleeves. See available materials on page VG-6.

### PACKING:

Made of EPDM, it eliminates possible leaks to the exterior as well as minimising the maintenance needs of traditional packings. In combination with the grease nipples, it guarantees an optimal functioning of the gate.

### STEM:

Made of stainless steel, which provides it with a high resistance to corrosion and a long life. In rising stem valves the stem protector also protects the spindle against dirt.

### ACTUATORS:

All actuators supplied by ORBINOX are interchangeable, and supplied with an standard mounting kit for installation purposes on site.

### YOKE or ACTUATOR SUPPORT:

Made of steel (stainless steel available on request) and EPOXY coated. Its robust design provides it with great rigidity, withstanding the most adverse operating conditions. Reinforced design is standard starting from DN 200.

### EPOXY COATING:

The epoxy coating on all ORBINOX cast iron and carbon steel components is electrostatically applied making the valves to be corrosion resistant with a high quality finished surface. The ORBINOX standard colour is RAL-5015 blue.

### GATE SAFETY PROTECTION:

ORBINOX automated valves are provided with gate guards in accordance with EU Safety Standards. The design feature prevents any objects from being caught accidentally while the gate is moving.

## OTHER OPTIONS

### Bottom splash guard (Fig. 1 and 2):

There are two types of splash guards that can be installed on the lower part of the valve body. They permit either periodic or continuous removal of solids that may accumulate during operation of the valve. They shall always be connected to a drain line.

(Fig. 1) Flat plate

(Fig. 2) Tubular design

### Conventional leak proof packing (Fig. 3 and 4):

The VG can use conventional leak proof packing and packing gland follower which guarantee full tightness at maximum design pressure.

(Fig. 3) Standard packing

(Fig. 4) Optional: conventional leak proof packing

We recommend to contact our technical department

## OTHER OPTIONS

### Open-closed lockout system (Fig. 5):

The standard valve is ready to install a lockout pin for emergency or maintenance situations.

(Fig. 5)

### Other materials of constructions:

Other materials may be used, such as carbon steel, different stainless steels (AISI 316, AISI 317, 2205, ...), special alloys (254SMO, Hastelloys, ...), Titanium, etc.

### Fabricated valves:

ORBINOX designs, produces and delivers special fabricated valves for special process conditions (big sizes and/or high pressures)

### Flush ports (Fig. 6):

Allows flushing out of solids trapped within the body cavity and the sleeves. This option can be used in conjunction with splash guards

(Fig. 6)

### Gate coatings:

Gates can be provided with different coatings to improve wear and corrosion resistance, non-adherence properties, etc.

We recommend to contact our technical department

## ACTUATOR TYPES

### MANUAL:

Handwheel (rising stem)  
 Bevel Gear  
 Others (on request)

### AUTOMATIC:

Electric (rising stem)  
 Pneumatic (single & double-acting)  
 Hydraulic

All actuators supplied by ORBINOX are interchangeable

## FAIL SAFE SYSTEMS

Used on pneumatic actuated valves

### SINGLE ACTING (SPRING RETURN)

- Available from DN 50 to DN 200
- Supply pressure: min. 5 kg/cm<sup>2</sup> - max. 10 kg/cm<sup>2</sup>
- Options:
  - Fail open
  - Fail close

### SINGLE ACTING (VOLUME TANK)

- Available for all sizes
- Standard for valves sizes DN>200
- Options:
  - Pneumatic Failsafe
  - Pneumatic or Electric Failsafe

## ACCESSORIES

Open-closed lockout  
 Mechanical stops  
 Manual override actuators  
 Solenoid valves  
 Positioners  
 Limit switches  
 Proximity switches  
 Floor stand  
 Spindle extensions

*For further information, please see corresponding EX catalogue*

We recommend to contact our technical department

## TEMPERATURE CHART

### SEAT / SLEEVES

Material	Min/Max T.(°C)	Applications
Natural rubber	-30/75	General
EPDM	-30/120	Acids/Non-mineral oils
Neoprene	-30/90	Oils/Solvents
Chlorobutyl	-30/125	High temperatures
Nitrile	-30/120	Hydrocarbons/Oils/Greases

All of them are reinforced with a metal core. For other temperatures and applications, contact our technical department

### PACKINGS

Material	Max.T. (°C)
EPDM	120
PTFE impregn. synth. fiber (ST)	240

## SEAT

### RUBBER SLEEVES

The closure of the VG valve is achieved by its two characteristic high resistance elastomer sleeves, which improve the tight seal both in the adjustment with the flanges and in the closure. These sleeves have a metal core which provides them with a great resistance to demanding working conditions and pressures.

## ATEX

Please contact our ORBINOX representative for info and availability. Some considerations:

- Hand operated VG valves have been subjected to an ignition risk assessment according to DIN EN 13463: 1-5 and they are out the scope of application of ATEX Directive. Therefore hand operated valves are suitable for ALL ATEX zones.
- Electrically, pneumatically and hydraulically operated valves must be subjected to a conformity assessment of their own and also of the whole unit valve-actuator to get EC Type Approval to Directive 94/9.

**HAND OPERATED (rising stem)**

- Consists of: - Epoxy coated cast iron handwheel  
- Yoke  
- Stem and stem nut  
- Stem protector
- Available from DN 50 to DN 600 (larger sizes on request)
- Options (on request):  
- Open-closed lockout  
- Extensions and floor stands  
- PVC bellow
- Note: bevel gear is recommended for valve sizes DN>200 (full force on handwheel > 250 N)

- Recommended for valves larger than DN 200
- Consists of:  
- Stem and stem protector  
- Yoke  
- Bevel Gear Actuator with Handwheel
- Available from DN 200 to DN 900
- Options (on request):  
- Chainwheel  
- Open-closed lockout  
- Extensions and floor stands  
- PVC bellow

## PNEUMATIC ACTUATOR

- The standard pneumatic actuator (double acting on-off cylinder) consists of:

- DN $\leq$ 250: Aluminum barrels
- DN $\geq$ 300: Composite barrels
- Aluminum end caps
- Stainless Steel (AISI 304) piston rod
- Nitrile coated steel piston
- PVC bellows

- Available from DN 50 to DN 600

- Supply Pressure: 6 kg/cm<sup>2</sup>

- Reinforced design of support plates is standard starting from DN 200

- Options (on request):

- Hard anodized barrel and covers
- Stainless steel barrel and covers on request
- Open-closed lockout
- Manual override actuator
- Fail-safe systems

- Instrumentation (on request):

- Positioners
- Flow regulators
- Solenoid valves
- Air preparation unit

- Note: in order to guarantee the correct functioning of the pneumatic cylinder for the catalogue pressures, a supply pressure of 6 bar is required. For lower pressures, we recommend to contact our technical department

## HYDRAULIC ACTUATOR

- The hydraulic actuator consists of a double acting cylinder in accordance with ISO 6020/2
- Available from DN 50 to DN 900 with PVC bellows
- Hydraulic pressure: 100 kg/cm<sup>2</sup>
- Maximum hydraulic pressure: 160 kg/cm<sup>2</sup>
- Options:
  - Pressure indicators: mechanical and inductive
  - Open-closed lockout
  - Position transducers
  - Hydraulic groups
  - Electrical cabinets

**ELECTRIC ACTUATOR (rising stem)**

- Automatic actuator which consists of:
  - Electric motor
  - Motor support yoke flange (standardised flanges as per ISO 5210/DIN 3338)
- The standard electric motor is equipped with:
  - Manual emergency handwheel
  - Limit switches (open/closed)
  - Torque switches
- Available from DN 50 to DN 900
- Wide range of types and brands available to meet customer requirements
- Options: (on request)
  - Open-closed lockout
